| UE capability indication                    | OP                      |       | Enumerated (HS-DSCH, HS-DSCH+E-DCH)                   | Absence of this IE implies that neither HS-DSCH nor E-DCH are supported by the UE   | REL-6   |
| MBMS Selected Services                      | OP                      |       | MBMS Selected Services Short<br>10.3.9a.7d            |   | REL-6   |
| UE Mobility State Indicator                 | MD                      |       | Enumerated (High-mobilityDetected)                    | Absence of this IE implies that, according to [4] either the High mobility state is not applicable or it has not been detected by the UE.                       | REL-7   |
| Support for F-DPCH                          | OP                      |       | Enumerated (TRUE)                                     | The IE shall be set to TRUE when F-DPCH is fully supported by the UE.<br>Absence of this information element indicates that F-DPCH is not fully supported       | REL-6   |

|  |    |  |                   |  |       |
|--|----|--|-------------------|--|-------|
| Support for Enhanced F-DPCH              | OP |  | Enumerated (TRUE) | The absence of this IE indicates that the UE does not support enhanced F-DPCH  | REL-7 |
| HS-PDSCH in CELL_FACH                    | OP |  | Enumerated (TRUE) | The absence of this IE indicates that the UE does not support HS-PDSCH reception in CELL_FACH state.<br>Note 1   | REL-7 |
| MAC-ehs support                          | OP |  | Enumerated (TRUE) | The presence of this IE indicates that UE supports MAC-ehs, octet aligned transport block table, the use of special value of HE field to indicate end of an SDU for RLC AM and different HS-SCCHs in contiguous TTIs. The absence of this IE indicates that the UE does not support either MAC-ehs, octet aligned transport block table or the use of special value of HE field to indicate end of an SDU for RLC AM or different HS-SCCHs in contiguous TTIs. | REL-7 |
| DPCCH Discontinuous Transmission support | OP |  | Enumerated (TRUE) | The absence of this IE indicates that the UE does not support DPCCH Discontinuous Transmission   | REL-7 |
| Support of common E-DCH                  | OP |  | Enumerated (TRUE) | The absence of this IE indicates that the UE does not support E-DCH enhanced random access in CELL_FACH state and Idle mode.<br>Note 1   | REL-8 |
| Multi cell support                       | OP |  | Enumerated (TRUE) | The absence of this IE indicates that the UE does not support dual cell operations on adjacent frequencies   | REL-8 |
| Dual cell MIMO support                   | OP |  | Enumerated (TRUE) | The absence of this IE indicates that the UE does not support dual   | REL-9 |

|   |    |  |                                      |   |        |
|---|----|--|--------------------------------------|---|--------|
|   |    |  |                                      | cell with MIMO operation on adjacent frequencies.   |        |
| More than two cell or MIMO mode with four transmit antennas support | OP |  | Enumerated (higher rate, lower rate) | For FDD, the absence of this IE indicates that the UE does not support multi-cell operation on more than two cells. For 1.28 Mcps TDD, the absence of this IE indicates that the UE does not support MU-MIMO. If present, higher rate indicates uplink and downlink MU-MIMO, lower rate indicates uplink MU-MIMO  | REL-10 |
|   |    |  |                                      | For FDD, the absence of this IE indicates that the UE does not support multi-cell operation on more than two cells or MIMO mode with four transmit antennas. For 1.28 Mcps TDD, the absence of this IE indicates that the UE does not support MU-MIMO. If present, higher rate indicates uplink and downlink MU-MIMO, lower rate indicates uplink MU-MIMO | REL-11 |
| Pre-redirectioin info   | OP |  | Pre-redirectioin info 10.3.3.25a     | The presence of this IE indicates the UE support of radio access technologies that the UE could be directed to, and that the UE was not redirected from EUTRA.  | REL-8  |
| Support of MAC-i/is   | OP |  | Enumerated (TRUE)                    | The absence of this IE indicates that the UE does not support MAC-i/is operation.   | REL-8  |
| Support of SPS operation  | OP |  | Enumerated (TRUE)                    | For 1.28 Mcps TDD only. The absence of this IE indicates that the UE does not support SPS operation.  | REL-8  |
| Support for CS Voice over   | OP |  | Enumerated                           | The IE indicates  | REL-8  |

|   |        |  |                                    |  |        |
|---|--------|--|------------------------------------|--|--------|
| HSPA  |        |  | (TRUE)                             | the UE's support for CS Voice over HSPA, if set.   |        |
| System Information Container Stored Indicator | OP     |  | Enumerated (TRUE)                  | The presence of this IE indicates that the UE is accessing the cell using System Information stored in the variable SYSTEM_INFORMATION_CONTAINER   | REL-9  |
| Support of the first Frequency Band           | OP     |  | Enumerated (TRUE)                  | The presence of this IE indicates the UE supports the 1st band broadcasted in SIB5/5bis. For 1.28 Mcps TDD, the IE also indicates support band e if no band is broadcasted in SIB5/5bis. | REL-10 |
| Support of the second Frequency Band          | OP     |  | Enumerated (TRUE)                  | The presence of this IE indicates the UE supports the 2nd band broadcasted in SIB5/5bis. For 1.28 Mcps TDD, the IE also indicates support band f if no band is broadcasted in SIB5/5bis. | REL-10 |
| CSFB Indication                               | OP     |  | Enumerated (TRUE)                  | The presence of this IE indicates that the RRC Connection Request is due to CSFB call initiated in E-UTRA.   |        |
| <b>Measurement information elements</b>       |        |  |                                    |  |        |
| Measured results on RACH                      | OP     |  | Measured results on RACH 10.3.7.45 |  |        |
| Access stratum release indicator              | MP     |  | Enumerated( REL-4,                 | Absence of the IE implies R99. The IE also indicates the release of the RRC transfer syntax supported by the UE. 8 spare values are needed.  | REL-4  |
|   |        |  | REL-5,                             |  | REL-5  |
|   |        |  | REL-6,                             |  | REL-6  |
|   |        |  | REL-7,                             |  | REL-7  |
|   |        |  | REL-8,                             |  | REL-8  |
|   |        |  | REL-9,                             |  | REL-9  |
|   |        |  | REL-10,                            |  | REL-10 |
| REL-11)                                       | REL-11 |  |                                    |  |        |

NOTE 1: For 1.28 Mcps TDD, UE supporting HS-PDSCH in CELL\_FACH always supports E-DCH enhanced random access in CELL\_FACH state and Idle mode, and vice versa.

| Condition | Explanation  |
|-----------|--|
| CS-Domain | This IE is mandatory present if the IE "Domain indicator" has the value "CS domain". Otherwise it is not needed. |

If the encoded message does not fill a transport block, the RRC layer shall insert padding according to subclause 12.1.

## 10.2.40 RRC CONNECTION SETUP

This message is used by the network to accept the establishment of an RRC connection for a UE, including assignment of signalling link information, transport channel information and optionally physical channel information.

RLC-SAP: UM

Logical channel: CCCH

Direction: UTRAN → UE

| Information Element/Group name  | Need | Multi | Type and reference | Semantics description |
|---|------|-------|--------------------|-----------------------|
| 222   |      |       | segment,10.2.48.4  |                       |
| NOTE 1: If Combination 6 - 9 contains a Master information block, the Master information block shall be located as the first IE in the list.  |      |       |                    |                       |
| NOTE 2: If one of the combinations 5 to 9 is used, the IE "SIB type" = "Extension Type" should not occur more than once in that message, otherwise the UE behaviour is unspecified. |      |       |                    |                       |

| Condition       | Explanation   |
|-----------------|---|
| <i>channel2</i> | This IE is mandatory present if the channel is BCH, otherwise it is not needed. |

If the encoded message does not fill a transport block, the RRC layer shall insert padding according to subclause 12.1. Padding is needed e.g. if the remaining space is insufficient to start a new First Segment (which requires several bits for SIB type, SEG\_COUNT and SIB data).

## 10.2.48a System Information Container

This message is sent via another radio access technology to provide information to the UE.

- RLC-SAP: N/A (Sent through a different RAT)
- Logical channel: N/A (Sent through a different RAT)
- Direction: A different RAT → UE

### 10.2.48.1 First Segment

This segment type is used to transfer the first segment of a segmented system information block. The IE is used when the first segment fills the entire transport block (Combination 2).

| Information Element/Group name    | Need | Multi | Type and reference              | Semantics description |
|-----------------------------------|------|-------|---------------------------------|-----------------------|
| <b>Other information elements</b> |      |       |                                 |                       |

### 10.2.48.2 First Segment (short)

This segment type is used to transfer the first segment of a segmented system information block. The IE is used when the first segment is concatenated after other segments in a transport block (Combination 5, 7 and 9).

| Information Element/Group name    | Need | Multi | Type and reference                 | Semantics description |
|-----------------------------------|------|-------|------------------------------------|-----------------------|
| <b>Other information elements</b> |      |       |                                    |                       |
| SIB type                          | MP   |       | SIB Type,<br>10.3.8.21             |                       |
| SEG_COUNT                         | MP   |       | SEG<br>COUNT,<br>10.3.8.17         |                       |
| SIB data variable                 | MP   |       | SIB data<br>variable,<br>10.3.8.20 |                       |

### 10.2.48.3 Subsequent Segment

This segment type is used to transfer a subsequent segment of a segmented system information block.

| Information Element/Group name    | Need | Multi | Type and reference        | Semantics description |
|-----------------------------------|------|-------|---------------------------|-----------------------|
| <b>Other information elements</b> |      |       |                           |                       |
| SIB type                          | MP   |       | SIB Type, 10.3.8.21       |                       |
| Segment index                     | MP   |       | Segment Index, 10.3.8.18  |                       |
| SIB data fixed                    | MP   |       | SIB data fixed, 10.3.8.19 |                       |

#### 10.2.48.4 Last Segment

This segment type is used to transfer the last segment of a segmented system information block. The IE is used when the last segment has a length, excluding length denominator, from 215 through 222 (Combination 11).

| Information Element/Group name    | Need | Multi | Type and reference        | Semantics description  |
|-----------------------------------|------|-------|---------------------------|--|
| <b>Other information elements</b> |      |       |                           |  |
| SIB type                          | MP   |       | SIB Type, 10.3.8.21       |  |
| Segment index                     | MP   |       | Segment Index, 10.3.8.18  |  |
| SIB data fixed                    | MP   |       | SIB data fixed, 10.3.8.19 | In case the SIB data is less than 222 bits, padding shall be used. The same padding bits shall be used as defined in clause 12.1 |

#### 10.2.48.5 Last Segment (short)

This segment type is used to transfer the last segment of a segmented system information block. The IE is used when the last segment has a length, excluding length denominator, of upto 214 bits (Combination 4, 5, 6 and 7).

| Information Element/Group name    | Need | Multi | Type and reference           | Semantics description |
|-----------------------------------|------|-------|------------------------------|-----------------------|
| <b>Other information elements</b> |      |       |                              |                       |
| SIB type                          | MP   |       | SIB Type, 10.3.8.21          |                       |
| Segment index                     | MP   |       | Segment Index, 10.3.8.18     |                       |
| SIB data variable                 | MP   |       | SIB data variable, 10.3.8.20 |                       |

#### 10.2.48.6 Complete SIB

This segment type is used to transfer a non-segmented system information block. The IE is used when the complete SIB has a length, excluding length denominator, from 215 through 226 (Combination 10).

| Information Element/Group name    | Need | Multi | Type and reference  | Semantics description   |
|-----------------------------------|------|-------|---------------------|---|
| <b>Other information elements</b> |      |       |                     |   |
| SIB type                          | MP   |       | SIB Type, 10.3.8.21 |   |
| SIB data fixed                    | MP   |       | Bit string (226)    | The first/leftmost/most significant bit of the bit string contains the first bit of the segment. In case the SIB data is less than 226 bits, padding shall be used. The same padding bits shall be used as defined in clause 12.1 |

### 10.2.48.7 Complete SIB (short)

This segment type is used to transfer a non-segmented system information block. The IE is used when the complete SIB has a length, excluding length denominator, of upto 214 bits (Combination 6, 7, 8 and 9).

| Information Element/Group name    | Need | Multi | Type and reference           | Semantics description |
|-----------------------------------|------|-------|------------------------------|-----------------------|
| <b>Other information elements</b> |      |       |                              |                       |
| SIB type                          | MP   |       | SIB Type, 10.3.8.21          |                       |
| SIB data variable                 | MP   |       | SIB data variable, 10.3.8.20 |                       |

### 10.2.48.8 System Information Blocks

The IE "SIB data" within the IEs, "First Segment", "Subsequent or last Segment" and "Complete SIB" contains either complete system information block or a segment of a system information block. The actual system information blocks are defined in the following clauses.

10.2.48.8.1 Master Information Block

| Information Element/Group name                                      | Need       | Multi | Type and reference  | Semantics description  | Version |
|---|------------|-------|---|--|---------|
| <b>Other information elements</b>                                   |            |       |   |  |         |
| MIB Value tag   | MP         |       | MIB Value tag 10.3.8.9  |  |         |
| <b>CN information elements</b>                                      |            |       |   |  |         |
| Supported PLMN types  | MP         |       | PLMN Type 10.3.1.12   |  |         |
| PLMN Identity   | CV-GSM     |       | PLMN Identity 10.3.1.11   |  |         |
| Multiple PLMN List  | OP         |       | Multiple PLMN List 10.3.1.7a  | If present, this IE specifies the PLMNs of the cell. If absent, the IE "PLMN Identity" specifies the PLMN of the cell. | REL-6   |
| <b>ANSI-41 information elements</b>                                 |            |       |   |  |         |
| ANSI-41 Core Network Information                                    | CV-ANSI-41 |       | ANSI-41 Core Network Information 10.3.9.1                                     |  |         |
| References to other system information blocks and scheduling blocks | MP         |       | References to other system information blocks and scheduling blocks 10.3.8.14 |  |         |
| CSG Indicator   | OP         |       | Enumerated (TRUE)   | If present, the cell is a CSG cell (see [4]). If absent, the cell is not a CSG cell.                                   | REL-8   |

| Condition | Explanation   |
|-----------|---|
| GSM       | The IE is mandatory present if the IE "Supported PLMN Types" is set to 'GSM-MAP' or 'GSM-MAP AND ANSI-41', and not needed otherwise |
| ANSI-41   | The IE is mandatory present if the IE "Supported PLMN Types" is set to 'ANSI-41' or 'GSM-MAP AND ANSI-41', and not needed otherwise |

10.2.48.8.2 Scheduling Block 1

| Information Element/Group name                | Need | Multi | Type and reference                                      | Semantics description |
|---|------|-------|---|-----------------------|

#### 10.2.48.8.7 System Information Block type 4

The system information block type 4 contains parameters for cell selection and re-selection to be used in connected mode.

| Information Element/Group name             | Need | Multi | Type and reference  | Semantics description |
|--|------|-------|---|-----------------------|
| <b>UTRAN mobility information elements</b> |      |       |   |                       |
| Cell identity                              | MP   |       | Cell identity<br>10.3.2.2                                   |                       |
| Cell selection and re-selection info       | MP   |       | Cell selection and re-selection info for SIB3/4<br>10.3.2.3 |                       |
| Cell Access Restriction                    | MP   |       | Cell Access Restriction<br>10.3.2.1                         |                       |

### 10.2.48.8.8 System Information Block type 5 and 5bis

The system information block type 5 contains parameters for the configuration of the common physical channels in the cell. System information block type 5bis uses the same structure as System information block type 5. System information block type 5bis is sent instead of system information block type 5 in cells that use Band IV or Band IX or Band X if it is broadcasted.

| Information Element/Group name    | Need | Multi | Type and reference                    | Semantics description   | Version |
|-----------------------------------|------|-------|---------------------------------------|---|---------|
| SIB6 Indicator                    | MP   |       | Boolean                               | TRUE indicates that SIB6 is broadcast in the cell. When the UE receives SIB5 in the System Information Container message, this IE is interpreted as FALSE |         |
| SIB22 Indicator                   | MP   |       | Boolean                               | TRUE indicates that SIB22 is broadcast in the cell.   | REL-11  |

|---|--------------|-------|--------------------------------------|--|---------|
|   |              |       | Information 1.28 Mcps TDD 10.3.6.36h |  |         |
| Second Frequency info                       | OP           |       | Integer (0 .. 16383)                 | Note 3   | REL-8   |
| Treset Usage Indicator                      | OP           |       | Enumerated (TRUE)                    | Only for 1.28 Mcps TDD. The presence of this IE means the timer Treset is not valid when the dedicated H-RNTI is configured in CELL_FACH and CELL_PCH. | REL-8   |
| UpPCH Position Info                         | CV-Frequency |       | Integer (0 .. 127)                   | Only for 1.28 Mcps TDD.  | REL-8   |
| Cell Update message with optimised encoding | OP           |       | Enumerated (TRUE)                    | Only for FDD. The presence of this IE means that UE shall use the Rel-11 asn1 message type for Cell Update, if the UE supports this message type.      | REL-11  |

NOTE 1: DL scrambling code of the Primary CCPCH is the same as the one for Primary CPICH (FDD only).

NOTE 2: There is only one MCCH in a cell, which may either be mapped on to an S-CCPCH also used for non-MBMS purposes or to an S-CCPCH dedicated to MBMS. In the first case the MCCH configuration is specified within the IE "Secondary CCPCH system information", in the latter case the MCCH configuration is provided within the IE "Secondary CCPCH system information MBMS".

NOTE 3: This IE is used in 1.28 Mcps TDD multi-frequency cell to indicate the secondary frequency at which enhanced E-DCH transmission and HS-PDSCH reception for 1.28 Mcps TDD is supported and to indicate that corresponding IEs: "Common E-DCH system info", "HS-DSCH common system information" (TDD) and "HS-DSCH DRX in CELL\_FACH Information 1.28 Mcps TDD" can apply for this frequency. The absence of "Frequency info" means that enhanced E-DCH access transmission and HS-PDSCH reception and above IEs apply for primary frequency. For 1.28 Mcps TDD only.

| Condition        | Explanation  |
|------------------|--|
| <i>CTCH</i>      | The IE is mandatory present if the IE "CTCH indicator" is equal to TRUE for at least one FACH, otherwise the IE is not needed in the message |
| <i>Frequency</i> | The IE is optional if the IE "Frequency info" is present, otherwise the IE is not needed.  |

#### 10.2.48.8.9 System Information Block type 6

#### 10.2.48.8.14 System Information Block type 11

The system information block type 11 contains measurement control information to be used in the cell.

| Information Element/Group name          | Need | Multi | Type and reference                         | Semantics description   |
|---|------|-------|--|---|
| SIB12 Indicator                         | MP   |       | Boolean                                    | TRUE indicates that SIB12 is broadcast in the cell.   |
| <b>Measurement information elements</b> |      |       |  |   |
| FACH measurement occasion info          | OP   |       | FACH measurement occasion info<br>10.3.7.8 | If the cell is operating in MBSFN mode as indicated in subclause 8.1.1.6.3 the UE behaviour upon reception of this IE is unspecified. |

| Information Element/Group name         | Need | Multi | Type and reference                               | Semantics description   |
|--|------|-------|--|---|
| Measurement control system information | MP   |       | Measurement control system information 10.3.7.47 | For 1.28 Mcps TDD if the cell is operating in MBSFN only mode the UE behaviour upon reception of this IE is unspecified.  |
| MBSFN frequency list                   | OP   |       | MBSFN frequency list 10.3.9a.12a                 | If present contains all neighbouring frequencies of MBSFN clusters operating in MBSFN mode as indicated in subclause 8.1.1.6.3. If the cell is operating in MBSFN mode as indicated in subclause 8.1.1.6.3 the UE behaviour upon reception of this IE is unspecified. |

#### 10.2.48.8.14a System Information Block type 11bis

The system information block type 11bis contains measurement control information to be used in the cell in addition to System Information Block type 11 and optionally UTRAN mobility information for CSG cells.

| Information Element/Group name                   | Need | Multi                      | Type and reference  | Semantics description  | Version |
|--|------|----------------------------|---|--|---------|
| <b>Measurement information elements</b>          |      |                            |   |  | REL-6   |
| Measurement control system information extension | OP   |                            | Measurement control system information extension 10.3.7.47a |  | REL-6   |
| <b>UTRAN mobility information elements</b>       |      |                            |   |  | REL-8   |
| CSG PSC Split Information                        | OP   |                            | CSG PSC Split Information 10.3.2.9                          | This IE specifies the Primary Scrambling Code reservation information for CSG Cells. | REL-8   |
| Dedicated CSG frequency list                     | OP   | 1 to <maxDedicatedCSGFreq> |   | This IE specifies the frequencies dedicated for CSG cells only.                      | REL-8   |
| >Dedicated CSG frequency                         | MP   |                            | Frequency Info 10.3.6.36                                    |  | REL-8   |

## 10.2.48.8.15 System Information Block type 12

The system information block type 12 contains measurement control information to be used in connected mode.

| Information Element/Group name          | Need | Multi | Type and reference                               | Semantics description |
|---|------|-------|--|-----------------------|
| <b>Measurement information elements</b> |      |       |  |                       |
| FACH measurement occasion info          | OP   |       | FACH measurement occasion info 10.3.7.8          |                       |
| Measurement control system information  | MP   |       | Measurement control system information 10.3.7.47 |                       |

## 10.2.48.8.16 System Information Block type 13

The system information block type 13 contains ANSI-41 system information.

| Information Element/Group name       | Need | Multi               | Type and reference                             | Semantics description                                 |
|--------------------------------------|------|---------------------|--|---|
| <b>Other information elements</b>    |      |                     |  |   |
| <b>CN Information Elements</b>       |      |                     |  |   |
| CN Domain system information list    | MP   | 1 to <maxCNdomains> |  | Send CN information for each CN domain.               |
| >CN Domain system information        | MP   |                     | CN Domain system information 10.3.1.2          |   |
| <b>UE Information</b>                |      |                     |  |   |
| UE timers and constants in idle mode | MD   |                     | UE timers and constants in idle mode 10.3.3.44 | The UE behaviour is unspecified if this IE is absent. |
| Capability update requirement        | MD   |                     | Capability update requirement 10.3.3.2         | Default value is defined in subclause 10.3.3.2        |

## 10.2.48.8.16.1 System Information Block type 13.1

The system information block type 13.1 contains the ANSI-41 RAND information.

| Information Element/Group name      | Need | Multi | Type and reference                | Semantics description |
|-------------------------------------|------|-------|-----------------------------------|-----------------------|
| <b>ANSI-41 information elements</b> |      |       |                                   |                       |
| ANSI-41 RAND information            | MP   |       | ANSI-41 RAND information 10.3.9.6 |                       |

## 10.2.48.8.16.2 System Information Block type 13.2

The system information block type 13.2 contains the ANSI-41 User Zone Identification information.

| Information Element/Group name               | Need | Multi | Type and reference                                    | Semantics description |
|--|------|-------|---|-----------------------|
| <b>ANSI-41 information elements</b>          |      |       |   |                       |
| ANSI-41 User Zone Identification information | MP   |       | ANSI-41 User Zone Identification information 10.3.9.7 |                       |

## 10.2.48.8.16.3 System Information Block type 13.3

The system information block type 13.3 contains the ANSI-41 Private Neighbour List information.

| Information Element/Group name             | Need | Multi | Type and reference                                  | Semantics description |
|--|------|-------|---|-----------------------|
| <b>ANSI-41 information elements</b>        |      |       |   |                       |
| ANSI-41 Private Neighbour List information | MP   |       | ANSI-41 Private Neighbour List information 10.3.9.5 |                       |

## 10.2.48.8.16.4 System Information Block type 13.4

The system information block type 13.4 contains the ANSI-41 Global Service Redirection information.

| Information Element/Group name                 | Need | Multi | Type and reference                                      | Semantics description |
|--|------|-------|---|-----------------------|
| <b>ANSI-41 information elements</b>            |      |       |   |                       |
| ANSI-41 Global Service Redirection information | MP   |       | ANSI-41 Global Service Redirection information 10.3.9.2 |                       |

## 10.2.48.8.17 System Information Block type 14

NOTE: Only for 3.84 Mcps TDD and 7.68 Mcps TDD.

The system information block type 14 contains parameters for common and dedicated physical channel uplink outer loop power control information to be used in both idle and connected mode.

| Information Element/Group name        | Need | Multi        | Type and reference                         | Semantics description |
|---------------------------------------|------|--------------|--|-----------------------|
| <b>PhyCH information elements</b>     |      |              |  |                       |
| Individual Timeslot interference list | MP   | 1 to <maxTS> |  |                       |
| >Individual Timeslot interference     | MP   |              | Individual Timeslot interference 10.3.6.38 |                       |
| Expiration Time Factor                | MD   |              | Expiration Time Factor 10.3.3.12           | Default is 1.         |

## 10.2.48.8.18 System Information Block type 15

The system information block type 15 contains information useful for UE-based or UE-assisted positioning methods.

| Information Element/Group name | Need | Multi         | Type and Reference  | Semantics description  |
|--------------------------------|------|---------------|---|--|
| GPS Data ciphering info        | OP   |               | UE positioning Ciphering info 10.3.7.86                           | If this IE is present then the SIB types 15.1, 15.2 & 15.3 are ciphered in accordance with the Data Assistance Ciphering Algorithm specified in [18] |
| Reference position             | MP   |               | Ellipsoid point with altitude and uncertainty ellipsoid 10.3.8.4c | approximate position where the UE is located   |
| GPS reference time             | MP   |               | UE positioning GPS reference time 10.3.7.96                       |  |
| Satellite information          | OP   | 1 to <maxSat> |   | This IE is present whenever bad (failed/failing) satellites are detected by UTRAN [18].  |
| >BadSatID                      | MP   |               | Enumerated(0..63)   |  |

#### 10.2.48.8.18.0 System Information Block type 15bis

The system information block type 15bis contains information useful for UE-based or UE-assisted positioning methods. The content of this SIB is common to all GANSS.

| Information Element/Group name     | Need | Type and Reference  | Semantics description                        | Version |
|------------------------------------|------|---|--|---------|
| Reference position                 | MP   | Ellipsoid point with altitude and uncertainty ellipsoid 10.3.8.4c | approximate position where the UE is located | REL-7   |
| GANSS reference time               | MP   | UE positioning GANSS reference time 10.3.7.96o                    |  | REL-7   |
| GANSS ionospheric model            | OP   | UE positioning GANSS ionospheric model 10.3.7.92a                 |  | REL-7   |
| GANSS additional ionospheric model | OP   | UE positioning GANSS additional ionospheric model 10.3.7.92b      |  | REL-8   |
| GANSS Earth orientation parameters | OP   | UE positioning GANSS Earth orientation parameters 10.3.7.92c      |  | REL-8   |

## 10.2.48.8.18.1 System Information Block type 15.1

The system information block type 15.1 contains information useful for UE positioning DGPS Corrections. The DGPS Corrections message contents are based on a Type-1 message of DGPS specified in [13].

| Information Element/Group name | Need | Multi | Type and Reference                            | Semantics description |
|--------------------------------|------|-------|---|-----------------------|
| DGPS corrections               | MP   |       | UE positioning GPS DGPS corrections 10.3.7.91 |                       |

## 10.2.48.8.18.1a System Information Block type 15.1bis

The system information block type 15.1bis contains information useful for UE positioning DGNSS Corrections. The DGNSS Corrections message contents are based on a Type-1 message of DGNSS specified in [13]. The content of this SIB is GNSS specific.

| Information Element/Group name | Need | Type and Reference                          | Semantics description | Version |
|--------------------------------|------|---|-----------------------|---------|
| DGNSS corrections              | MP   | UE positioning DGNSS corrections 10.3.7.91b |                       | REL-7   |

## 10.2.48.8.18.2 System Information Block type 15.2

The system information block type 15.2 contains information useful for GPS Navigation Model. These IE fields are based on information extracted from the subframes 1 to 3 of the GPS navigation message [12].

| Information Element/Group name                | Need | Multi | Type and Reference  | Semantics description  |
|---|------|-------|---|--|
| Transmission TOW                              | MP   |       | Integer (0..604799)   | The approximate GPS time-of-week when the message is broadcast. in seconds |
| SatID   | MP   |       | Integer (0..63)   | Satellite ID   |
| GPS Ephemeris and Clock Correction Parameters | MP   |       | UE positioning GPS Ephemeris and Clock Correction parameters 10.3.7.91a |  |

## 10.2.48.8.18.2a System Information Block type 15.2bis

The system information block type 15.2bis contains information useful for GANSS Navigation Model. The content of this SIB is GNSS specific.

| Information Element/Group name | Need | Type and Reference                               | Semantics description | Version |
|--------------------------------|------|--|-----------------------|---------|
| GANSS Navigation Model         | MP   | UE positioning GANSS navigation model 10.3.7.94a |                       | REL-7   |

## 10.2.48.8.18.2b System Information Block type 15.2ter

The system information block type 15.2ter contains information useful for GANSS Navigation Model. The content of this SIB is GNSS specific.

| Information Element/Group name     | Need | Type and Reference   | Semantics description | Version |
|------------------------------------|------|--|-----------------------|---------|
| GANSS additional navigation models | MP   | UE positioning GANSS additional navigation models 10.3.7.94b |                       | REL-8   |

## 10.2.48.8.18.3 System Information Block type 15.3

The system information block type 15.3 contains information useful for ionospheric delay, UTC offset, and Almanac. These IEs contain information extracted from the subframes 4 and 5 of the GPS navigation message, [12].

| Information Element/Group name   | Need               | Multi | Type and Reference                             | Semantics description  |
|----------------------------------|--------------------|-------|--|--|
| Transmission TOW                 | MP                 |       | Integer (0..604799)                            | The approximate GPS time-of-week when the message is broadcast. in seconds       |
| GPS Almanac and Satellite Health | OP                 |       | UE positioning GPS almanac 10.3.7.89           |  |
| GPS ionospheric model            | OP                 |       | UE positioning GPS ionospheric model 10.3.7.92 |  |
| GPS UTC model                    | OP                 |       | UE positioning GPS UTC model 10.3.7.97         |  |
| SatMask                          | CV- <i>Almanac</i> |       | Bit string(1..32)                              | indicates the satellites that contain the pages being broadcast in this data set |
| LSB TOW                          | CV- <i>Almanac</i> |       | Bit string(8)                                  |  |

| Condition      | Explanation  |
|----------------|--|
| <i>Almanac</i> | This IE is mandatory present if the IE "GPS Almanac and Satellite Health" is present |

## 10.2.48.8.18.3a System Information Block type 15.3bis

The system information block type 15.3bis contains information useful for GANSS time model, UTC offset and Almanac, as well as auxiliary information. The content of this SIB is GNSS specific.

| Information Element/Group name | Need | Multi             | Type and Reference                                    | Semantics description | Version |
|--------------------------------|------|-------------------|---|-----------------------|---------|
| GANSS Almanac                  | OP   |                   | UE positioning GANSS almanac 10.3.7.89a               |                       | REL-7   |
| GANSS time models              | OP   | 1 to <maxGANSS-1> |   |                       | REL-7   |
| >GANSS time model              | OP   |                   | UE positioning GANSS time model 10.3.7.97a            |                       | REL-7   |
| GANSS UTC model                | OP   |                   | UE positioning GANSS UTC model 10.3.7.97c             |                       | REL-7   |
| GANSS additional UTC models    | OP   |                   | UE positioning GANSS additional UTC models 10.3.7.97d |                       | REL-8   |
| GANSS auxiliary information    | OP   |                   | UE positioning GANSS auxiliary information 10.3.7.97f |                       | REL-8   |

#### 10.2.48.8.18.4 System Information Block type 15.4

The system information block type 15.4 contains ciphering information for System Information Block type 15.5 and information useful for OTDOA UE-assisted Positioning method.

| Information Element/Group name        | Need | Multi | Type and Reference  | Semantics description   |
|---------------------------------------|------|-------|---|---|
| OTDOA Data ciphering info             | OP   |       | UE positioning Ciphering info 10.3.7.86                         | If this IE is present then the for UE-based the System Information Block type 15.5 is ciphered in accordance with the Data Assistance Ciphering Algorithm specified in [18] |
| OTDOA assistance data for UE-assisted | MP   |       | UE positioning OTDOA assistance data for UE-assisted 10.3.7.103 |   |

#### 10.2.48.8.18.4a System Information Block type 15.5

The system information block type 15.5 contains information useful for OTDOA UE-based Positioning method.

| Information Element/Group name     | Need | Multi | Type and Reference   | Semantics description |
|------------------------------------|------|-------|--|-----------------------|
| OTDOA assistance data for UE-based | MP   |       | UE positioning OTDOA assistance data for UE-based<br>10.3.7.103a |                       |

#### 10.2.48.8.18.5 System Information Block type 15.6

The system information block type 15.6 contains information useful for acquisition of GANSS signals. The content of this SIB is GNSS specific.

| Information Element/Group name          | Need | Multi | Type and Reference   | Semantics description  | Version |
|---|------|-------|--|--|---------|
| GANSS TOD                               | MP   |       | Integer (0..86399)   | GANSS Time of Day in seconds where GANSS reference measurement information is valid. | REL-7   |
| GANSS reference measurement information | MP   |       | UE positioning GANSS reference measurement information<br>10.3.7.88b |  | REL-7   |

#### 10.2.48.8.18.6 System Information Block type 15.7

The system information block type 15.7 contains data bits which can be used for data wipe-off. The content of this SIB is GNSS specific.

| Information Element/Group name | Need | Multi | Type and Reference                                     | Semantics description | Version |
|--------------------------------|------|-------|--|-----------------------|---------|
| GANSS data bit assistance      | MP   |       | UE positioning GANSS data bit assistance<br>10.3.7.97b |                       | REL-7   |

#### 10.2.48.8.18.7 System Information Block type 15.8

The system information block type 15.8 contains ciphering information and real-time integrity information. The content of this SIB is GNSS specific.

| Information Element/Group name | Need | Multi | Type and Reference                                     | Semantics description  | Version |
|--------------------------------|------|-------|--|--|---------|
| GANSS Data ciphering info      | OP   |       | UE positioning Ciphering info<br>10.3.7.86             | If this IE is present then the SIB types 15.1bis, 15.2bis, 15.2ter, 15.3bis, 15.6 and 15.7 are ciphered in accordance with the Data Assistance Ciphering Algorithm specified in [18] | REL-7   |
| GANSS real-time integrity      | OP   |       | UE positioning GANSS real-time integrity<br>10.3.7.95b |  | REL-7   |

## 10.2.48.8.19 System Information Block type 16

The system information block type 16 contains radio bearer, transport channel and physical channel parameters to be stored by UE in idle and connected mode for use during handover to UTRAN.

| Information Element/Group name    | Need | Multi | Type and Reference                       | Semantics description |
|-----------------------------------|------|-------|--|-----------------------|

#### 10.2.48.8.25 System Information Block type 22

NOTE: Only for FDD.

The system information block type 22 contains information for Concurrent deployment of 2ms and 10ms TTI in a cell, Node B triggered HS-DPCCH transmission, Fallback to R99 PRA CH, TTI alignment, Per HARQ process activation and de-activation and HS-DSCH DRX operation with second DRX cycle in CELL\_FACH. Further, it contains control parameters related to the PRA CH access preamble.

| Information Element/Group name  | Need | Multi | Type and reference   | Semantics description   | Version |
|---|------|-------|--|---|---------|
| PRACH preamble control parameters extension list Type 1 (for Enhanced Uplink) | OP   |       | PRACH preamble control parameters extension list for Type 1 (for Enhanced Uplink) 10.3.6.135 | Control parameters of the physical signal. This and/or parameters in IE "PRACH preamble control parameters (for Enhanced Uplink)" is used for access by UE's supporting concurrent deployment when the outcome of the common E-DCH TTI selection is 10ms. Also used for access if "E-DCH Transmission Time Interval" is equal to 10ms when concurrent deployment is not used, by UEs that support either Node B triggered HS-DPCCH transmission or HS-DSCH DRX operation with second DRX cycle or Fallback to R99 PRACH. See subclause 8.5.45, 8.5.73 and 8.5.74. | REL-11  |

## 10.3.1.3b Domain Specific Access Restriction

| Information Element/Group name             | Need | Multi   | Type and reference              | Semantics description   | Version |
|--|------|---------|---------------------------------|---|---------|
| CHOICE <i>restriction status</i>           | MP   |         |                                 |   | REL-6   |
| >no restriction                            |      |         |                                 | (no data)<br>This means 'no Access Class is barred'   | REL-6   |
| >restriction                               |      |         |                                 |   | REL-6   |
| >>Domain Specific Access Class Barred List | MD   | <MaxAC> |                                 | The first instance of the parameter corresponds to Access Class 0, the second to Access Class 1 and so on up to Access Class 15. UE reads this IE of its access class stored in SIM. The default value is the IE "Access Class Barred list" contained in the IE "Cell Access Restriction" of the System Information Block Type 3. | REL-6   |
| >>>Access Class Barred                     | MP   |         | Enumerated (barred, not barred) |   | REL-6   |

### 10.3.1.3c Domain Specific Access Restriction Parameters

This IE specifies domain specific access class restriction parameters for CS and PS domain.

| Information Element/Group name        | Need | Multi | Type and reference                           | Semantics description   | Version |
|---------------------------------------|------|-------|--|---|---------|
| CS Domain Specific Access Restriction | MP   |       | Domain Specific Access Restriction 10.3.1.3b | This IE contains Domain Specific Access Restriction Parameters for CS domain. | REL-6   |
| PS Domain Specific Access Restriction | MP   |       | Domain Specific Access Restriction 10.3.1.3b | This IE contains Domain Specific Access Restriction Parameters for PS domain. | REL-6   |

### 10.3.1.3d Domain Specific EAB Parameters

| Information Element/Group name    | Need                 | Multi | Type and reference          | Semantics description   | Version |
|-----------------------------------|----------------------|-------|-----------------------------|---|---------|
| CS Domain Specific EAB Parameters | OP                   |       | EAB Configuration 10.3.1.3e | This IE contains Domain Specific EAB Parameters for CS domain.                    | REL-11  |
| PS Domain Specific EAB Parameters | OP                   |       | EAB Configuration 10.3.1.3e | This IE contains Domain Specific EAB Parameters for PS domain.                    | REL-11  |
| Common EAB Parameters             | CV-<br><i>Common</i> |       | EAB Configuration 10.3.1.3e | This IE contains Domain Specific EAB Parameters for both CS domain and PS domain. | REL-11  |

| Condition     | Explanation   |
|---------------|---|
| <i>Common</i> | The IE is mandatory present if neither the IE "CS Domain Specific EAB Parameters" nor the IE "PS Domain Specific EAB Parameters" is present. Otherwise, the IE is not needed. |

### 10.3.1.3e EAB Configuration

| Information Element/Group name | Need | Multi | Type and reference  | Semantics description  | Version |
|--------------------------------|------|-------|---------------------|--|---------|
| EAB Category                   | MP   |       | Enumerated(a, b, c) | This IE identifies the category of UEs for which EAB applies. Value 'a' corresponds to all UEs, value 'b' corresponds to the UEs that are neither in their HPLMN nor in a PLMN that is equivalent to it, and value 'c' corresponds to the UEs that are neither in the PLMN listed as most preferred PLMN of the country where the UEs are roaming in the operator-defined PLMN selector list on the SIM, nor in their HPLMN nor in a PLMN that is equivalent to their HPLMN, see [75]. | REL-11  |
| EAB Access Class Barred List   | MP   | 10    |                     | The first instance of this IE corresponds to Access Class 0, the second instance corresponds to  | REL-11  |

| Information Element/<br>Group name | Need | Multi | Type and<br>reference                 | Semantics description  | Version |
|------------------------------------|------|-------|---------------------------------------|--|---------|
|                                    |      |       |                                       | Access Class 1, and so on up to<br>Access Class 9. UE reads its Access<br>Class stored in the SIM. |         |
| >Access Class Barred               | MP   |       | Enumerated(<br>barred, not<br>barred) |  | REL-11  |

#### 10.3.1.4 IMEI

This IE contains an International Mobile Equipment Identity. Setting specified in [11].

| Information Element/Group<br>name | Need | Multi | Type and<br>reference | Semantics description   |
|-----------------------------------|------|-------|-----------------------|---|
| IMEI                              | MP   | 15    |                       | The first element contains the<br>first IMEI digit, the second<br>element the second IMEI digit<br>and so on. |
| >IMEI digit                       | MP   |       | INTEGER(0.<br>.15)    |   |

#### 10.3.1.5 IMSI (GSM-MAP)

This IE contains an International Mobile Subscriber Identity, used towards a GSM -MAP type of PLMN. Setting specified in [11].

| Information Element/Group<br>name | Need | Multi   | Type and<br>reference | Semantics description   |
|-----------------------------------|------|---------|-----------------------|---|
| IMSI                              | MP   | 6 to 21 |                       | The first element contains the<br>first IMSI digit, the second<br>element the second IMSI digit<br>and so on.<br>Although normally upto 15<br>digits are used for this IE, a<br>bigger length is used to<br>support future extension. |
| >IMSI digit                       | MP   |         | INTEGER(0.<br>.9)     |   |

#### 10.3.1.6 Intra Domain NAS Node Selector

This IE carries information to be used to route the establishment of a signalling connection to a CN node within a CN domain.

| Information Element/Group<br>name | Need | Multi | Type and<br>reference | Semantics description  |
|-----------------------------------|------|-------|-----------------------|--|
| CHOICE <i>version</i>             | MP   |       |                       |  |
| >R99                              |      |       |                       | This choice shall also be used<br>by mobiles that are compliant<br>to this version of the protocol |

| >>Location/Registration Access Class Barred List | MP   | 15    |                                 | The first ten instance of the parameter corresponds to Access Class 0 to 9, and eleventh to fifteenth instance of the parameter corresponds to Access Class 11 to 15, respectively. UE reads this IE of its access class stored in SIM (except for Access Class 10). | REL-8   |
| >>>Access Class Barred                           | MP   |       | Enumerated (barred, not barred) |  | REL-8   |

## 10.3.1.7a Multiple PLMN List

This information element identifies the multiple Public Land Mobile Networks (for a GSM-MAP type of PLMN) of a cell in a shared network.

| Information Element/Group name   | Need | Multi  | Type and reference                            | Semantics description   | Version |
|----------------------------------|------|--------|---|---|---------|
| MIB PLMN Identity                | MP   |        | Boolean                                       | The PLMN identity IE 10.3.1.11, broadcasted in the MIB, shall be included in the multiple PLMN list if and only if this IE is TRUE. | REL-6   |
| Multiple PLMNs                   | MP   | 1 to 5 |   |   | REL-6   |
| >PLMN identity with Optional MCC |      |        | PLMN identity with Optional MCC<br>10.3.1.11a |   | REL-6   |

## 10.3.1.8 NAS message

A non-access stratum message to be transferred transparently through UTRAN.

| Information Element/Group name | Need | Multi | Type and reference     | Semantics description   |
|--------------------------------|------|-------|------------------------|---|
| NAS message                    | MP   |       | Octet string (1..4095) | The first octet contains octet 1 [17] of the NAS message, the second octet contains octet 2 of the NAS message and so on. |

### 10.3.1.9 NAS system information (GSM-MAP)

This information element contains system information that belongs to the non-access stratum for a GSM-MAP type of PLMN. This information is transparent to RRC. It may contain either information specific to one CN domain (CS or PS) or information common for both CN domains.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description  |
|--------------------------------|------|-------|--------------------|--|
| GSM-MAP NAS system information | MP   |       | Octet string(1..8) | The first octet contains octet 1 [5] of the NAS system information element, the second octet contains octet 2 of the NAS system information element and so on. |

### 10.3.1.10 Paging record type identifier

| Information Element/Group name | Need | Multi | Type and reference  | Semantics description |
|--------------------------------|------|-------|---|-----------------------|
| Paging record type identifier  | MP   |       | Enumerated (IMSI (GSM-MAP), TMSI (GSM-MAP)/ P-TMSI, IMSI (DS-41), TMSI (DS-41)) |                       |

### 10.3.1.10a Paging Permission with Access Control Parameters

| Information Element/Group name              | Need | Multi | Type and reference                           | Semantics description | Version |
|---|------|-------|--|-----------------------|---------|
| Paging Response Restriction Indication      | MP   |       | Enumerated (All, CS, PS, None)               |                       | REL-8   |
| Location/Registration Restriction Indicator | MP   |       | Enumerated (All, CS, PS)                     |                       | REL-8   |
| Location/Registration                       | MP   |       | Location /Registration Parameters 10.3.1.7oa |                       | REL-8   |

### 10.3.1.11 PLMN identity

This information element identifies a Public Land Mobile Network for a GSM-MAP type of PLMN. Setting of digits is defined in [11].

| Information Element/Group name | Need | Multi  | Type and reference | Semantics description  |
|--------------------------------|------|--------|--------------------|--|
| MCC                            | MP   | 3      |                    | The first element contains the first MCC digit, the second element the second MCC digit and so on. |
| >MCC digit                     | MP   |        | INTEGER(0..9)      |  |
| MNC                            | MP   | 2 to 3 |                    | The first element contains the first MNC digit, the second element the second MNC digit and so on. |
| >MNC digit                     | MP   |        | INTEGER(0..9)      |  |

### 10.3.1.11a PLMN identity with Optional MCC

This information element is a PLMN identity in subclause 10.3.1.11 where MCC is optional. It is used in a shared network and inserted in the Multiple PLMN List in subclause 10.3.1.7a.

| Information Element/<br>Group name | Need | Multi  | Type and<br>reference | Semantics description  | Version |
|------------------------------------|------|--------|-----------------------|--|---------|
| MCC                                | MD   | 3      |                       | The first element contains the first MCC digit, the second element the second MCC digit and so on. | REL-6   |
| >MCC digit                         | MP   |        | Integer<br>(0..9)     |  | REL-6   |
| MNC                                | MP   | 2 to 3 |                       | The first element contains the first MNC digit, the second element the second MNC digit and so on. | REL-6   |
| >MNC digit                         | MP   |        | Integer<br>(0..9)     |  | REL-6   |

### 10.3.1.12 PLMN Type

Identifies the type of Public Land Mobile Network (PLMN). This IE shall be used to control the interpretation of network dependent messages and information elements in the RRC protocol.

| Information Element/Group<br>name | Need | Multi | Type and<br>reference  | Semantics description      |
|-----------------------------------|------|-------|--|----------------------------|
| PLMN Type                         | MP   |       | Enumerated<br>(GSM-MAP,<br>ANSI-41,<br>GSM-MAP<br>and ANSI-<br>41) | One spare value is needed. |

### 10.3.1.13 P-TMSI (GSM-MAP)

This IE contains a Packet Temporary Mobile Subscriber Identity, used towards a GSM-MAP type of PLMN.

| Information Element/Group<br>name | Need | Multi | Type and<br>reference | Semantics description  |
|-----------------------------------|------|-------|-----------------------|--|
| P-TMSI                            | MP   |       | Bit string<br>(32)    | Setting specified in [11]. The first/leftmost bit of the bit string contains the most significant bit of the P-TMSI. |

### 10.3.1.14 RAB identity

This information element uniquely identifies a radio access bearer within a CN domain.

| Information Element/Group name  | Need | Multi | Type and reference | Semantics description   |
|---------------------------------|------|-------|--------------------|---|
| CHOICE <i>RAB identity type</i> | MP   |       |                    |   |
| >RAB identity (GSM-MAP)         |      |       | Bit string (8)     | Formatted according to [5]. The first/leftmost bit of the bit string contains the most significant bit of the RAB identity. In case of a radio bearer setup for an MBMS selected service, the RAB identity is set to the value reserved for 'MBMS Broadcast mode', see [5]. |
| >RAB identity (ANSI-41)         |      |       | Bit string (8)     | The first/leftmost bit of the bit string contains the most significant bit of the RAB identity.   |

| CHOICE <i>NAS binding info type</i> | Condition under which the given <i>RAB identity type</i> is chosen |
|-------------------------------------|--|
| RAB identity (GSM-MAP)              | PLMN is of type GSM-MAP  |
| RAB identity (ANSI-41)              | PLMN is of type ANSI-41  |

### 10.3.1.15 Routing Area Code

Identifies a routing area within a location area for a GSM-MAP type of PLMN.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description   |
|--------------------------------|------|-------|--------------------|---|
| Routing Area Code              | MP   |       | Bit string(8)      | Setting specified in [11]. The first/leftmost bit of the bit string contains the most significant bit of the Routing Area Code. |

### 10.3.1.16 Routing Area Identification

Identifies uniquely a routing area for a GSM-MAP type of PLMN. Setting specified in [11].

| Information Element/Group name | Need | Multi | Type and reference                       | Semantics description |
|--------------------------------|------|-------|--|-----------------------|
| LAI                            | MP   |       | Location area identification<br>10.3.1.7 |                       |
| RAC                            | MP   |       | Routing area code<br>10.3.1.15           |                       |

### 10.3.1.17 TMSI (GSM-MAP)

This IE contains a Temporary Mobile Subscriber Identity, used towards a GSM-MAP type of PLMN.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description  |
|--------------------------------|------|-------|--------------------|--|
| TMSI (GSM-MAP)                 | MP   |       | Bit string (32)    | Setting specified in [11]. The first/leftmost bit of the bit string contains the most significant bit of the TMSI. |

## 10.3.2 UTRAN mobility Information elements

### 10.3.2.1 Cell Access Restriction

Indicates the restrictions to cell access.

| Information Element/Group name              | Need              | Multi | Type and reference                     | Semantics description  | Version |
|---|-------------------|-------|--|--|---------|
| Cell Barred                                 | MP                |       | Enumerated(not barred, barred)         | If the cell is operating in MBSFN mode as indicated in subclause 8.1.1.6.3 and the value in this IE is different from "barred" the UE behaviour is unspecified.  |         |
| Intra-frequency cell re-selection indicator | CV- <i>Barred</i> |       | Enumerated(not allowed, allowed)       |  |         |
| T <sub>barred</sub>                         | CV- <i>Barred</i> |       | Integer (10,20,40,80,160,320,640,1280) | [4]<br>[s]   |         |
| Cell Reserved for operator use              | MP                |       | Enumerated(reserved, not reserved)     |  |         |
| Cell Reservation Extension                  | MP                |       | Enumerated(reserved, not reserved)     |  |         |
| Cell Reserved for CSG                       | CV-CSG            |       | Enumerated(TR UE)                      |  | REL-8   |
| Access Class Barred list                    | CV-SIB3-MD        | maxAC |  | Default is no access class barred is applied. The first instance of the parameter corresponds to Access Class 0, the second to Access Class 1 and so on up to Access Class 15. UE reads this IE of its access class stored in SIM. |         |
| >Access Class Barred                        | MP                |       | Enumerated (barred, not barred)        |  |         |

| Condition      | Explanation   |
|----------------|---|
| <i>Barred</i>  | The IE is mandatory present if the IE "Cell Barred" has the value "Barred"; otherwise the element is not needed in the message.   |
| <i>SIB3-MD</i> | The IE is mandatory and has a default value if the IE "Cell Access Restriction" is included in SIB 3. Otherwise the IE is not needed.   |
| <i>CSG</i>     | The IE is optional present if the cell is a CSG cell and the IE "Cell Reservation Extension" has the value "reserved". Otherwise the IE is not needed. The IE is not included in System Information Block type 4. |

### 10.3.2.2 Cell identity

This information element identifies a cell unambiguously within a PLMN.

NOTE: This information element may carry any implementation dependent identity that unambiguously identifies a cell within a PLMN. For GAN to UTRAN HO the Cell id is encoded as required in [9].

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|--------------------|-----------------------|
| Cell identity                  | MP   |       | bit string(28)     |                       |

## 10.3.2.3 Cell selection and re-selection info for SIB3/4

| Information Element/Group name                 | Need | Multi              | Type and reference                   | Semantics description  | Version |
|--|------|--------------------|--------------------------------------|--|---------|
| Mapping Info                                   | OP   |                    | Mapping info<br>10.3.2.5             | For FDD, 3.84 Mcps TDD and 7.68 Mcps TDD, this IE should not be sent.  |         |
| Cell selection and reselection quality measure | MP   |                    | Enumerated (CPICH Ec/N0, CPICH RSCP) | Choice of measurement (CPICH Ec/N0 or CPICH RSCP) to use as quality measure Q for FDD cells. This IE is also sent to the UE in SIB11/12. Both occurrences of the IE should be set to the same value. |         |
| CHOICE mode                                    | MP   |                    |                                      |  |         |
| >FDD   |      |                    |                                      |  |         |

| >>>>>EARFCN extension          | OP   |       | Integer(65536 ...262143) | EARFCN of the downlink carrier frequency [64].                                      | REL-11  |
| >>>>GSM                        |      |       |                          |   | REL-8   |
| >>>>>GSM cell group            | MP   |       | GSM cell group 10.3.7.9a |   | REL-8   |
| >>E-UTRA detection             | MP   |       | Boolean                  | 'TRUE' means that the UE may detect the presence of a E-UTRA cell and report to NAS | REL-8   |

NOTE: It is always ensured by the UTRAN that priorities for different Radio Access Technologies are always different (e.g. a GERAN group of cells cannot have the same priority as a UTRA or E-UTRA frequency).

NOTE: It is always ensured by the UTRAN that priorities for which both  $Thresh_{x,high2}$  and  $Thresh_{x,low2}$  are provided are always different from the priorities for which both  $Thresh_{x,high2}$  and  $Thresh_{x,low2}$  are not provided.

### 10.3.2.8 CSG Identity

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|-------|--------------------|-----------------------|---------|
| CSG Identity                   | MP   |       | Bit string(27)     | As defined in [76]    | REL-8   |

### 10.3.2.9 CSG PSC Split Information

| Information Element/Group name | Need              | Multi | Type and reference  | Semantics description  | Version |
|--------------------------------|-------------------|-------|---|--|---------|
| Start PSC                      | MP                |       | Integer (0..504 by step of 8)   | The value of this IE specifies the start PSC of the first PSC range (NOTE 1).  | REL-8   |
| Number of PSCs                 | MP                |       | Enumerated (5, 10, 15, 20, 30, 40, 50, 64, 80, 120, 160, 256, alltheRest) | This IE specifies the number of PSCs reserved for CSG cells in each PSC range. "alltheRest" indicates all values from Start PSC to 511. Three spare values are needed.     | REL-8   |
| PSC Range 2 Offset             | CV-<br>alltheRest |       | Integer (8..504 by step of 8)   | If this IE is included, the UE shall calculate the second PSC range (NOTE 2).<br>If this IE is not included, the UE shall consider the second PSC range to be not present. | REL-8   |

| Information Element/Group name   | Need | Multi | Type and reference | Semantics description | Version |
|--|------|-------|--------------------|-----------------------|---------|
| NOTE 1: Let the IE "Start PSC" = s. and "Number of PSCs" = n. The complete set of (n) PSC values in range 1 is defined as: {s, ((s + 1) mod 512), ((s + 2) mod 512) ... ((s + n-1) mod 512)}.  |      |       |                    |                       |         |
| NOTE 2: Let the IEs "Start PSC" + "Number of PSCs" - 1 + "PSC Range 2 Offset" = s. and "Number of PSCs" = n. The complete set of (n) PSC values in range 2 is defined as: {(s mod 512), ((s + 1) mod 512), ((s + 2) mod 512) ... ((s + n-1) mod 512)}. |      |       |                    |                       |         |

| Condition         | Explanation  |
|-------------------|--|
| <i>alltheRest</i> | This IE is optionally present if the value of IE "Number of PSCs" is not set to "alltheRest". Otherwise, it is not needed. |

### 10.3.3 UE Information elements

#### 10.3.3.1 Activation time

Activation Time defines the frame number/time at which the operation/changes caused by the related message shall take effect. Values between 0 and 255 indicate the absolute value of CFN (Connection Frame Number) of that frame number/time.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|--------------------|-----------------------|
| Activation time                | MP   |       | Integer(0..255)    | CFN [10]              |

#### 10.3.3.2 Capability Update Requirement

This IE indicates to the UE which specific capabilities to transfer to the network.

| Information Element/Group name                              | Need | Multi                      | Type and reference | Semantics description  | Version               |
|---|------|----------------------------|--------------------|--|-----------------------|
| UE radio access FDD capability update requirement           | MP   |                            | Boolean            | TRUE indicates update required   |                       |
| UE radio access 3.84 Mcps TDD capability update requirement | MP   |                            | Boolean            | TRUE indicates update required   | Name changed in REL-4 |
| UE radio access 7.68 Mcps TDD capability update requirement | MP   |                            | Boolean            | TRUE indicates update required   | REL-7                 |
| UE radio access 1.28 Mcps TDD capability update requirement | MP   |                            | Boolean            | TRUE indicates update required   | REL-4                 |
| System specific capability update requirement list          | OP   | 1 to <maxSystemCapability> |                    | In this version, a maximum size of 4 of the list shall be applied and any items after the 4 <sup>th</sup> item in the list shall be ignored. |                       |
| >System specific capability update requirement              | MP   |                            | Enumerated (GSM    | Five spare values needed.  |                       |
|   |      |                            | , GERAN Iu         |  | REL-5                 |
|   |      |                            | , E-UTRA)          |  | REL-8                 |

Default value is:

"UE radio capability FDD update requirement" = FALSE

"UE radio capability 3.84 Mcps TDD update requirement" = FALSE

"UE radio capability 7.68 Mcps TDD update requirement" = FALSE

"UE radio capability 1.28 Mcps TDD update requirement" = FALSE

"System specific capability update requirement" not present.

### 10.3.3.3 Cell update cause

Indicates the cause for cell update.

| Information Element/Group name | Need | Multi | Type and reference   | Semantics description      | Version |
|--------------------------------|------|-------|--|----------------------------|---------|
| Cell update cause              | MP   |       | Enumerated (cell reselection, periodical cell update, uplink data transmission, paging response, re-entered service area, radio link failure, RLC unrecoverable error, | One spare value is needed. |         |
|                                |      |       | MBMS reception, MBMS ptp RB request)   |                            | REL-6   |

### 10.3.3.4 Ciphering Algorithm

| Information Element/Group name | Need | Multi | Type and reference     | Semantics description | Version |
|--------------------------------|------|-------|------------------------|-----------------------|---------|
| Ciphering algorithm            | MP   |       | Enumerated (UEA0, UEA1 |                       |         |
|                                |      |       | , UEA2)                |                       | REL-7   |

### 10.3.3.5 Ciphering mode info

This information element contains the ciphering specific security mode control information.

| Information Element/Group name                       | Need | Multi | Type and reference                 | Semantics description   |
|--|------|-------|------------------------------------|---|
| Ciphering mode command                               | MP   |       | Enumerated (start/restart)         |   |
| Ciphering algorithm                                  | MP   |       | Ciphering algorithm 10.3.3.4       |   |
| Ciphering activation time for DPCH                   | OP   |       | Activation time 10.3.3.1           | Used for radio bearers mapped on RLC-TM. Only applicable if the UE is already in CELL_DCH state   |
| Radio bearer downlink ciphering activation time info | OP   |       | RB activation time info, 10.3.4.13 | Used for radio bearers mapped on RLC-AM or RLC-UM<br>The UTRAN should not include this IE in a message other than a SECURITY MODE COMMAND |

### 10.3.3.6 CN domain specific DRX cycle length coefficient

A coefficient in the formula to count the paging occasions to be used by a specific UE (specified in [4]).

| Information Element/Group name                  | Need | Multi | Type and reference | Semantics description   |
|---|------|-------|--------------------|---|
| CN domain specific DRX cycle length coefficient | MP   |       | Integer(6...9)     | Refers to 'k' in the formula as specified in [4], Discontinuous reception |

### 10.3.3.7 Void

#### 10.3.3.7a Common E-RNTI info

NOTE: For 1.28 Mcps TDD only.

This IE defines the common E-RNTI used in enhanced CELL\_FACH and Idle mode. Each instance in the IE "Common E-RNTI information" is related to an E-RUCCH which is defined in the PRACH system information in System Information Block 5. The first instance in IE "Common E-RNTI information" is related to the first instance of E-RUCCH in the PRACH system information in System Information Block 5 in the order of their appearances, the second instance in IE "Common E-RNTI information" is related to the second instance of E-RUCCH in the PRACH system information in System Information Block 5 and so on.

From each instance in the IE "Common E-RNTI information", we can compile a common E-RNTI list which is related to a certain E-RUCCH. For each E-RUCCH, there are a number of common E-RNTI groups related to it; up to 2 common E-RNTIs allocated in each group. The common E-RNTI list related to a certain E-RUCCH is derived in incremental manner with start code indicated by IE "Starting E-RNTI". The "Starting E-RNTI" corresponds to the first E-RNTI in the first group; if the "Number of E-RNTI per group" is bigger than one, then the second E-RNTI in the first group is derived by the first E-RNTI plus 1; the first E-RNTI in the second group is derived by the last of E-RNTI of the first group plus 1... the whole common E-RNTI list related to the E-RUCCH is compiled in this manner.

| Information Element/Group name | Need | Multi            | Type and reference           | Semantics description  | Version |
|--------------------------------|------|------------------|------------------------------|--|---------|
| Common E-RNTI information      | MP   | 1 to <maxERUCCH> |                              |  | REL-8   |
| >Starting E-RNTI               | MP   |                  | E-RNTI 10.3.3.10a            | Indicates the starting code of E-RNTI related to a certain E-RUCCH.  | REL-8   |
| >Number of group               | MP   |                  | Integer(1..maxERNTIgroup)    | Indicates the number of common E-RNTI groups related to the E-RUCCH. | REL-8   |
| >Number of E-RNTI per group    | MP   |                  | Integer(1..maxERNTIperGroup) | Indicates the number of common E-RNTIs in the group.                 | REL-8   |

### 10.3.3.8 C-RNTI

The cell RNTI (C-RNTI) identifies a UE having a RRC connection within a cell.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|--------------------|-----------------------|
| C-RNTI                         | MP   |       | bit string(16)     |                       |

#### 10.3.3.8a CSG proximity indication capability

| Information Element/Group name                  | Need | Multi | Type and reference | Semantics description   | Version |
|---|------|-------|--------------------|---|---------|
| Support of intra-frequency proximity indication | OP   |       | Enumerated (TRUE)  | The absence of this IE indicates that the UE does not support intra-frequency | REL-9   |

| Information Element/Group name                  | Need | Multi | Type and reference | Semantics description  | Version |
|---|------|-------|--------------------|--|---------|
|   |      |       |                    | proximity indication   |         |
| Support of inter-frequency proximity indication | OP   |       | Enumerated (TRUE)  | The absence of this IE indicates that the UE does not support inter-frequency proximity indication | REL-9   |
| Support of E-UTRA proximity indication          | OP   |       | Enumerated (TRUE)  | The absence of this IE indicates that the UE does not support E-UTRA proximity indication          | REL-9   |

### 10.3.3.9 Void

#### 10.3.3.9a DSCH-RNTI

In TDD, the DSCH-RNTI identifies a UE in CELL\_DCH or CELL\_FACH using a DSCH or USCH within the cell.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|--------------------|-----------------------|
| DSCH-RNTI                      | MP   |       | bit string(16)     |                       |

### 10.3.3.10 Void

#### 10.3.3.10a E-RNTI

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|-------|--------------------|-----------------------|---------|
| E-RNTI                         | MP   |       | bit string(16)     |                       | REL-6   |

10.3.3.11 Establishment cause

Cause for an RRC connection establishment request.

| Information Element/Group name | Need | Multi | Type and reference  | Semantics description         | Version |
|--------------------------------|------|-------|---|-------------------------------|---------|
| Establishment cause            | MP   |       | Enumerated( Originating Conversational Call, Originating Streaming Call, Originating Interactive Call, Originating Background Call, Originating Subscribed traffic Call, Terminating Conversational Call, Terminating Streaming Call, Terminating Interactive Call, Terminating Background Call, Emergency Call, Inter-RAT cell re-selection, Inter-RAT cell change order, Registration, Detach, Originating High Priority Signalling, Originating Low Priority Signalling, Call re-establishment, Terminating High Priority Signalling, Terminating Low Priority Signalling, Terminating – cause unknown, MBMS reception, MBMS ptp RB request, | Nine spare values are needed. |         |
|                                |      |       | Delay Tolerant  |                               | REL-10  |

|  |  |  |         |  |  |
|--|--|--|---------|--|--|
|  |  |  | Access) |  |  |
|--|--|--|---------|--|--|

### 10.3.3.12 Expiration Time Factor

| Information Element/Group name | Need | Multi | Type and reference  | Semantics description |
|--------------------------------|------|-------|---|-----------------------|
| Expiration Time Factor         | MP   |       | Enumerated(2times, 4times, 8times, 16times, 32times, 64times, 128times, 256times) |                       |

### 10.3.3.12a Extended Wait Time

The field defines the wait time for Delay Tolerant access request, to be passed to the UE upper layers.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|--------------------|-----------------------|
| Extended Wait time             | MP   |       | Integer(1..1800)   | Value in seconds      |

### 10.3.3.13 Failure cause

Cause for failure to perform the requested procedure.

| Information Element/Group name | Need | Multi | Type and reference   | Semantics description         |
|--------------------------------|------|-------|--|-------------------------------|
| Failure cause                  | MP   |       | Enumerated (configuration unsupported, physical channel failure, incompatible simultaneous reconfiguration, protocol error, compressed mode runtime error, cell update occurred, invalid configuration, configuration incomplete, unsupported measurement, MBMS session already received correctly, lower priority MBMS service) | Five spare values are needed. |

### 10.3.3.14 Failure cause and error information

Cause for failure to perform the requested procedure.

| Information Element/Group name | Need           | Multi | Type and reference                   | Semantics description |
|--------------------------------|----------------|-------|--------------------------------------|-----------------------|
| Failure cause                  | MP             |       | Failure cause 10.3.3.13              |                       |
| Protocol error information     | CV-ProtErr     |       | Protocol error information 10.3.8.12 |                       |
| Deleted TGPSI                  | CV-CompModeErr |       | TGPSI 10.3.6.82                      |                       |

| Condition          | Explanation  |
|--------------------|--|
| <i>ProtErr</i>     | The IE is mandatory present if the IE "Failure cause" has the value "Protocol error"; otherwise it is not needed in the message.               |
| <i>CompModeErr</i> | The IE is mandatory present if the IE "Failure cause" has the value "Compressed mode runtime error"; otherwise it is not needed in the message |

### 10.3.3.14o Group release information

Contains addressing information to perform a release of a group of RRC connections.

| Information Element/Group name | Need | Multi | Type and reference         | Semantics description | Version |
|--------------------------------|------|-------|----------------------------|-----------------------|---------|
| U-RNTI group                   | MP   |       | U-RNTI group<br>10.3.3.47a |                       | REL-5   |

### 10.3.3.14a H-RNTI

The H-RNTI identifies an UE having a HS-PDSCH assignment within a cell.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|-------|--------------------|-----------------------|---------|
| H-RNTI                         | MP   |       | bit string(16)     |                       | REL-5   |

### 10.3.3.14b IMS Voice capability

| Information Element/Group name             | Need | Multi | Type and reference | Semantics description  | Version |
|--|------|-------|--------------------|--|---------|
| Voice over UTRA PS HS Support              | OP   |       | Enumerated (TRUE)  | Absence of this IE means that the UE does not support IMS voice                          | REL-9   |
| SRVCC Support from UTRA to UTRA            | OP   |       | Enumerated (TRUE)  | Absence of this IE means that the UE does not support SRVCC from UTRA PS HS to UTRA CS   | REL-9   |
| SRVCC Support from UTRA to GERAN           | OP   |       | Enumerated (TRUE)  | Absence of this IE means that the UE does not support SRVCC from UTRA PS HS to GERAN CS  | REL-9   |
| rSRVCC support from UTRA CS to E-UTRAN FDD | OP   |       | Enumerated (TRUE)  | Absence of this IE means that the UE does not support rSRVCC from UTRA CS to E-UTRAN FDD | REL-11  |
| rSRVCC support from UTRA CS to E-UTRAN TDD | OP   |       | Enumerated (TRUE)  | Absence of this IE means that the UE does not support rSRVCC from UTRA CS to E-UTRAN TDD | REL-11  |

### 10.3.3.15 Initial UE identity

This information element identifies the UE at a request of an RRC connection.

| Information Element/Group name | Need | Multi | Type and reference         | Semantics description |
|--------------------------------|------|-------|----------------------------|-----------------------|
| CHOICE <i>UE id type</i>       | MP   |       |                            |                       |

### 10.3.3.16 Integrity check info

The Integrity check info contains the RRC message sequence number needed in the calculation of XMAC-I [40] and the calculated MAC-I.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description  |
|--------------------------------|------|-------|--------------------|--|
| Message authentication code    | MP   |       | bit string(32)     | MAC-I [40]. The first/leftmost bit of the bit string contains the most significant bit of the MAC-I. The 27 MSB of the IE shall be set to zero and the 5 LSB of the IE shall be set to the value of the IE "RB identity" for the used signalling radio bearer when the encoded RRC message is used as the MESSAGE parameter in the integrity protection algorithm. |
| RRC Message sequence number    | MP   |       | Integer (0..15)    | The local RRC hyper frame number (RRC HFN) is concatenated with the RRC message sequence number to form the input parameter COUNT-I for the integrity protection algorithm.<br>The IE value shall be set to zero when the encoded RRC message is used as the MESSAGE parameter in the integrity protection algorithm.  |

### 10.3.3.17 Integrity protection activation info

This IE contains the time, in terms of RRC sequence numbers, when a new integrity protection configuration shall be activated for the signalling radio bearers.

| Information Element/Group name   | Need | Multi  | Type and reference | Semantics description  |
|----------------------------------|------|--------|--------------------|--|
| RRC message sequence number list | MP   | 4 to 5 |                    | The RRC sequence number when a new integrity protection configuration shall be applied, for signalling radio bearers in the order RB0, RB1, RB2, RB3, RB4.<br><br>The value for RB1 shall be ignored if this IE was included in a RRC message sent on RB1.<br><br>The value for RB2 shall be ignored if this IE was included in a RRC message sent on RB2. |
| >RRC message sequence number     | MP   |        | Integer (0..15)    |  |

### 10.3.3.18 Integrity protection Algorithm

| Information Element/Group name | Need | Multi | Type and reference      | Semantics description | Version |
|--------------------------------|------|-------|-------------------------|-----------------------|---------|
| Integrity protection algorithm | MP   |       | Enumerated (UIA1, UIA2) |                       | REL-7   |

### 10.3.3.19 Integrity protection mode info

| Information Element/Group name                | Need             | Multi | Type and reference                             | Semantics description  |
|---|------------------|-------|--|--|
| Integrity protection mode command             | MP               |       | Enumerated (start, modify)                     |  |
| Downlink integrity protection activation info | <i>CV-modify</i> |       | Integrity protection activation info 10.3.3.17 |  |
| Integrity protection algorithm                | OP               |       | Integrity protection algorithm 10.3.3.18       |  |
| Integrity protection initialisation number    | <i>CV-start</i>  |       | Bit string(32)                                 | FRESH [40]. The first/leftmost bit of the bit string contains the most significant bit of the FRESH. |

| Condition     | Explanation   |
|---------------|---|
| <i>Start</i>  | The IE is mandatory present if the IE "Integrity protection mode command" has the value "start", otherwise it is not needed in the message. |
| <i>Modify</i> | The IE is mandatory present if the IE "Integrity protection mode command" has the value "modify" and not needed otherwise.                  |

10.3.3.19a Void

10.3.3.20 Void

10.3.3.21 Measurement capability

| Information Element/Group name                | Need                 | Multi | Type and reference | Semantics description   | Version               |
|---|----------------------|-------|--------------------|---|-----------------------|
| Inter-frequency detected set measurements     | CV-not_iRAT_HoInfo   |       | Enumerated (TRUE)  | TRUE means that the UE is able to measure inter-frequency detected cells.   | REL-10                |
| Cells excluded from detected set measurements | CV-not_iRAT_HoInfo   |       | Enumerated (TRUE)  | TRUE means that the UE is able to exclude cells from detected set measurements.   | REL-11                |
| Wideband RSRQ FDD measurements                | CV-not_iRAT_HoInfo   |       | Enumerated (TRUE)  | TRUE means that the UE is able to perform wideband RSRQ FDD measurements. It is FFS whether it is mandatory for UEs of this release of the specification. | REL-11                |
| Wideband RSRQ TDD measurements                | CV-not_iRAT_HoInfo   |       | Enumerated (TRUE)  | TRUE means that the UE is able to perform wideband RSRQ TDD measurements. It is FFS whether it is mandatory for UEs of this release of the specification. | REL-11                |

|   |
|---|
| NOTE 10: All UEs supporting multi-carrier HS-DSCH should signal a category between 1 and 18 or 39, 40, 43, 44 for this IE. This IE corresponds to the multi-carrier HS-DSCH category supported by the UE when MAC-e-hs is not configured. |
| NOTE 11: This IE corresponds to the multi-carrier HS-DSCH category supported by the UE when MAC-e-hs is configured.   |
| NOTE 12: This IE corresponds to the HS-DSCH category supported by the UE when dual cell operation is configured.  |
| NOTE 13: This IE corresponds to the HS-DSCH category supported by the UE when dual cell operation is configured with MIMO.  |
| NOTE 14: This IE corresponds to the E-DCH category supported by the UE when Dual Cell E-DCH operation is configured.  |
| NOTE 15: This IE corresponds to the E-DCH category supported by the UE when Multi-carrier E-DCH operation is configured.  |
| NOTE 16: This IE corresponds to the HS-DSCH category supported by the UE when it is configured with multi-cell operation on three cells.  |
| NOTE 17: This IE corresponds to the HS-DSCH category supported by the UE when it is configured with multi-cell operation on four cells.   |
| NOTE 18: This IE corresponds to the HS-DSCH category supported by the UE when it is configured with multi-cell operation on five and/or six cells.  |
| NOTE 19: This IE corresponds to the HS-DSCH category supported by the UE when it is configured with multi-cell operation on seven and/or eight cells.   |
| NOTE 20: This IE corresponds to the HS-DSCH category supported by the UE when MIMO mode with four transmit antennas operation is configured.  |
| NOTE 21: This IE corresponds to the E-DCH category supported by the UE when MIMO mode and/or 64QAM is configured.   |

| Condition                    | Explanation   |
|------------------------------|---|
| <i>3.84_Mcps_tdd_req_sup</i> | The IE is mandatory present if the IE "TDD RF capability" is present with the IE "Chip rate capability" set to "3.84 Mcps" and a 3.84 Mcps TDD capability update has been requested in a previous message. Otherwise this field is not needed in the message. |
| <i>7.68_Mcps_tdd_req_sup</i> | The IE is mandatory present if the IE "TDD RF capability" is present with the IE "Chip rate capability" set to "7.68 Mcps" and a 7.68 Mcps TDD capability update has been requested in a previous message. Otherwise this field is not needed in the message. |
| <i>1.28_Mcps_tdd_req_sup</i> | The IE is mandatory present if the IE "TDD RF capability" is present with the IE "Chip rate capability" set to "1.28 Mcps" and a 1.28 Mcps TDD capability update has been requested in a previous message. Otherwise this field is not needed in the message. |
| <i>fdd_req_sup</i>           | The IE is mandatory present if the IE "Multi-mode capability" has the value "FDD" or "FDD/TDD" and a FDD capability update has been requested in a previous message. Otherwise this field is not needed in the message.                                       |
| <i>not_iRAT_HoInfo</i>       | The CHOICE <i>Support of HS-PDSCH</i> is not needed in the INTER RAT HANDOVER INFO message. Otherwise, it is mandatory present.   |
| <i>not_iRAT_HoInfo</i>       | The CHOICE <i>Support of E-DCH</i> is not needed in the INTER RAT HANDOVER INFO message. Otherwise, it is mandatory present.  |

### 10.3.3.25a Pre-redirectation info

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description | Version |
|--------------------------------|------|-------|--------------------|-----------------------|---------|
| Support of E-UTRA FDD          | MP   |       | Boolean            |                       | REL-8   |
| Support of E-UTRA TDD          | MP   |       | Boolean            |                       | REL-8   |

## 10.3.3.26 Protocol error cause

This IE indicates the cause for a message or information that was not comprehended.

| Information Element/Group name | Need | Multi | Type and reference  | Semantics description        |
|--------------------------------|------|-------|---|------------------------------|
| Protocol error cause           | MP   |       | Enumerated (ASN.1 violation or encoding error, Message type non-existent or not implemented, Message not compatible with receiver state, Information element value not comprehended, Information element missing, Message extension not comprehended) | Two spare values are needed. |

## 10.3.3.27 Protocol error indicator

This IE indicates whether a message was transmitted due to a protocol error or not.

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description   |
|--------------------------------|------|-------|--------------------|---|
| Protocol error indicator       | MP   |       | Boolean            | TRUE means a protocol error occurred. FALSE means a protocol error did not occur. |

## 10.3.3.28 RB timer indicator

This IE is used to indicate to UTRAN if the timers T314 or T315 has expired in the UE.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description   |
|--------------------------------|------|-------|--------------------|---|
| T314 expired                   | MP   |       | Boolean            | TRUE means that the timer has expired or the stored value is zero.<br>FALSE means that the timer has not expired. |
| T315 expired                   | MP   |       | Boolean            | TRUE means that the timer has expired or the stored value is zero.<br>FALSE means that the timer has not expired. |

### 10.3.3.29 Redirection info

This IE is used to redirect the UE to another frequency or other system. With the Release 6 version a list of cells may be provided to the UE, where cell selection shall be started.

| Information Element/Group name        | Need | Multi | Type and reference          | Semantics description | Version |
|---------------------------------------|------|-------|-----------------------------|-----------------------|---------|
| CHOICE <i>Redirection Information</i> | MP   |       |                             |                       |         |
| >Frequency info                       |      |       | Frequency info<br>10.3.6.36 |                       |         |
| >Inter-RAT info                       |      |       | Inter-RAT info<br>10.3.7.25 |                       |         |

### 10.3.3.30 Re-establishment timer

This information element indicates which timer to associate with RA B.

| Information Element/Group name | Need | Multi | Type and reference                  | Semantics description |
|--------------------------------|------|-------|-------------------------------------|-----------------------|
| Re-establishment timer         | MP   |       | Enumerated(<br>useT314,<br>useT315) |                       |

### 10.3.3.31 Rejection cause

Cause for rejection of RRC connection establishment request.

| Information Element/Group name | Need | Multi | Type and reference                         | Semantics description |
|--------------------------------|------|-------|--|-----------------------|
| Rejection cause                | MP   |       | Enumerated(<br>congestion,<br>unspecified) |                       |

### 10.3.3.32 Release cause

Cause for release of RRC connection.

| Information Element/Group name | Need | Multi | Type and reference   | Semantics description      |
|--------------------------------|------|-------|--|----------------------------|
| Release cause                  | MP   |       | Enumerated<br>(normal event,<br>unspecified,<br>pre-emptive release,<br>congestion,<br>re-establishment reject,<br>directed signalling connection re-establishment, user inactivity) | One spare value is needed. |

## 10.3.3.32a RF Capability Compressed

## 10.3.3.45 UE positioning capability

| Information Element/Group name          | Need                                      | Multi              | Type and reference                                       | Semantics description  | Version |
|---|---|--------------------|--|--|---------|
| Standalone location method(s) supported | MP  |                    | Boolean  | Defines if a UE can measure its location by some means unrelated to UTRAN<br>TRUE means supported  |         |
| UE based OTDOA supported                | MP  |                    | Boolean  | TRUE means supported   |         |
| Network Assisted GPS support            | MP  |                    | Enumerated ('Network based', 'UE based', 'Both', 'None') | Defines if the UE supports network based or UE based GPS methods.  |         |
| Network Assisted GANSS support List     | CV-<br><i>not_iRA</i><br><i>T_HolInfo</i> | 1 to<br><maxGANSS> |  | Absent if GANSS is not supported   | REL-7   |
| >GANSS ID                               | OP  |                    | Enumerated(  | Absence of this IE means Galileo. Eight spare values needed.   | REL-7   |
|   |   |                    | SBAS, Modernized_GPS, QZSS, GLONASS)                     | Absence of this IE means Galileo. Four spare values needed.  | REL-8   |
| >SBAS IDs                               | CV-<br><i>GANSS-ID-SBAS</i>               |                    | Bit String(8)  | Defines the specific SBAS(s) supported. This is represented using a bit string with one bit per SBAS as defined in NOTE 1 where a one value indicates support and a zero value no support.   | REL-8   |
| >GANSS mode                             | MP  |                    | Enumerated ('Network based', 'UE based', 'Both', 'None') | Defines if the UE supports network based or UE based GANSS methods   | REL-7   |
| >GANSS Signal ID                        | OP  |                    | 10.3.3.45a   | Absence of this field means the default value as defined in 10.3.3.45a for the GANSS identified by GANSS ID.   | REL-7   |
| >GANSS Signal IDs                       | OP  |                    | Bit String(8)  | Defines if a UE has the capability to perform measurements on more than one GANSS signal and which signals are supported. This is represented using a bit string with one bit per signal as defined in NOTE 2 where a one value indicates support and a zero value no support. | REL-8   |

|   |                           |  |                   |  |       |
|---|---------------------------|--|-------------------|--|-------|
| >Support for GANSS timing of cell frames measurement                            | MP                        |  | Boolean           | Defines if a UE has the capability to perform the UE GANSS timing of cell frames measurement.<br>TRUE means capable  | REL-7 |
| >Support for GANSS Carrier-Phase Measurement                                    | OP                        |  | Boolean           | Defines if a UE has the capability to perform the UE GANSS Carrier-Phase Measurement.<br>TRUE means capable  | REL-7 |
| >Support for non-native assistance choices                                      | OP                        |  | Enumerated (TRUE) | Absence of this element means not supported and presence means the UE supports assistance data choices in formats not defined in the ICD of a particular GANSS. Multiple choices exist for assistance data elements defined in 10.3.7.89a, 10.3.7.94a/b, 10.3.7.97d. | REL-8 |
| GANSS support indication  | CV-<br><i>iRAT_HoInfo</i> |  | Enumerated (TRUE) | TRUE indicates that the UE supports GANSS  | REL-7 |
| Support for GPS timing of cell frames measurement                               | MP                        |  | Boolean           | Defines if a UE has the capability to perform the UE GPS timing of cell frames measurement [7].<br>TRUE means capable  |       |
| Support for IPDL  | MP                        |  | Boolean           | Defines if a UE has the capability to use IPDL to enhance its 'SFN-SFN observed time difference –type 2' measurement.<br>TRUE means supported  |       |
| Support for Rx-Tx time difference type2 measurement                             | MP                        |  | Boolean           | TRUE means supported   |       |
| Support for UP assisted GPS measurement validity in CELL_PCH and URA_PCH states | CV-<br>GPSsupported       |  | Enumerated (TRUE) |  |       |
| Support for SFN-SFN observed time difference type 2 measurement                 | OP                        |  | Enumerated (TRUE) | Absence of this element means not supported and presence means supported.  |       |

| Condition              | Explanation   |
|------------------------|---|
| <i>GPSsupported</i>    | This IE is mandatory present if the IE "Network Assisted GPS support" is set to 'Network based', 'UE based' or 'Both'. Otherwise, it is not needed. |
| <i>not_iRAT_HoInfo</i> | These IEs are not needed in the INTER RAT HANDOVER INFO message. Otherwise, they are optionally present.  |
| <i>iRAT_HoInfo</i>     | This IE is optionally present in the INTER RAT HANDOVER INFO message. Otherwise, the IE is not needed.  |
| <i>GANSS-ID-SBAS</i>   | This IE is mandatory present if the IE "GANSS ID" is "SBAS" and not needed otherwise.   |

NOTE 1: Coding of SBAS IDs:

| SBAS IDs Bit String(8) |       |       |       |       |       |       |             |

### 10.3.3.45a GANSS Signal Id

The GANSS Signal ID encodes the identification of the signal for each GANSS. It depends on the GANSS Id.

| Information Element/Group name      | Need | Multi | Type and reference | Semantics description | Version |
|-------------------------------------|------|-------|--------------------|-----------------------|---------|
| GANSS Signal Identity per Signal Id | MD   |       | INTEGER (0..7)     | See NOTE 1            | REL-7   |

NOTE 1:

| GANSS Id         | Value         | Explanation       | Version |
|------------------|---------------|-------------------|---------|
| Default: Galileo | Default Value | Galileo E1        | REL-7   |
|                  | 0             | Galileo E5A       |         |
|                  | 1             | Galileo E5B       |         |
|                  | 2             | Galileo E6        |         |
|                  | 3             | Galileo E5A + E5B |         |
|                  | 4-7           | Reserved          |         |
| Modernized GPS   | Default Value | GPS L1C           | REL-8   |
|                  | 0             | GPS L2C           |         |
|                  | 1             | GPS L5            |         |
|                  | 2-7           | Reserved          |         |
| SBAS             | Default Value | L1                |         |
|                  | 0-7           | Reserved          |         |
| QZSS             | Default Value | QZS-L1            |         |
|                  | 0             | QZS-L1C           |         |
|                  | 1             | QZS-L2C           |         |
|                  | 2             | QZS-L5            |         |
|                  | 3-7           | Reserved          |         |
| GLONASS          | Default Value | GLONASS G1        |         |
|                  | 0             | GLONASS G2        |         |
|                  | 1             | GLONASS G3        |         |
|                  | 2-7           | Reserved          |         |

### 10.3.3.46 URA update cause

Indicates the cause for s URA update.

| Information Element/Group name | Need | Multi | Type and reference                              | Semantics description      |
|--------------------------------|------|-------|---|----------------------------|
| URA update cause               | MP   |       | Enumerated( change of URA, periodic URA update) | One spare value is needed. |

### 10.3.3.47 U-RNTI

The U-RNTI (UTRAN Radio Network Temporary Identity) is allocated to a UE having a RRC connection and identifies the UE within UTRAN.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description  |
|--------------------------------|------|-------|--------------------|--|
| SRNC identity                  | MP   |       | bit string(12)     | <p>The SRNC ID unique in PLMN is encoded to SRNC identity IE in descending order from b31 . The b31 is the most significant bit.</p> <p>If the SRNC ID is more than 12 bits as defined in [57], the remaining bits are included as most significant bits of S-RNTI IE.</p> <p>If the UE ID unique in SRNS encoded in S-RNTI IE is more than 20 bits as defined in [57], the most significant bits are included as the least significant bits of SRNC ID.</p>             |
| S-RNTI                         | MP   |       | bit string(20)     | <p>The UE ID unique in SRNS is encoded to the S-RNTI IE in descending order.</p> <p>If the S-RNTI IE is more than 20 bits as defined in [57], the remaining bits are included as the least significant bits of SRNC ID.</p> <p>If the SRNC ID is more than 12 bits as defined in [57], S-RNTI include both part of the SRNC ID and the UE-ID. The least significant bits encode the UE-ID to the S-RNTI IE in descending order. The b0 is the least significant bit.</p> |

### 10.3.3.47a U-RNTI group

The U-RNTI group is used to identify a group of UEs having an RRC connection.

| Information Element/Group name    | Need | Multi | Type and reference           | Semantics description   | Version |
|-----------------------------------|------|-------|------------------------------|---|---------|
| CHOICE <i>group discriminator</i> | MP   |       |                              |   | REL-5   |
| >All                              |      |       |                              | (no data)   | REL-5   |
| >U-RNTI mask                      |      |       |                              |   | REL-5   |
| >>U-RNTI                          | MP   |       | U-RNTI<br>10.3.3.47          | The bits that are less significant than the bit position indicated by the U-RNTI bit mask index shall be ignored. | REL-5   |
| >>U-RNTI bit mask index           | MP   |       | Enumerated(<br>b1, b2,..b31) | Values b1 to b31 indicate bit positions in the S-RNTI and in the SRNC identity.                                   | REL-5   |

### 10.3.3.48 U-RNTI Short

The U-RNTI (UTRAN Radio Network Temporary Identity) is allocated to a UE having a RRC connection and identifies the UE within UTRAN.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description   |
|--------------------------------|------|-------|--------------------|---|
| SRNC identity                  | MP   |       | bit string(12)     | The SRNC identity bits are numbered b20 to b31, where b20 is the least significant bit. If the SRNC ID is more than 12 bits as defined in [57], the remaining bits are included as most significant bits of S-RNTI 2 IE.  |
| S-RNTI 2                       | MP   |       | bit string(10)     | The UE ID is encoded in S-RNTI 2 in descending order. If the SRNC ID is more than 12 bits as defined in [57], S-RNTI include both part of the SRNC ID and the UE-ID. The least significant bits encode the UE-ID to the S-RNTI IE in descending order. The b0 is the least significant bit. |

### 10.3.3.49 UTRAN DRX cycle length coefficient

A coefficient in the formula to count the paging occasions to be used by a specific UE (specified in [4]).

| Information Element/Group name | Need | Multi | Type and reference                           | Semantics description   | Version |
|--------------------------------|------|-------|--|---|---------|
| DRX cycle length coefficient   | MP   |       | Integer(3..9)                                | Refers to 'k' in the formula as specified in [4], Discontinuous reception   |         |
| DRX cycle length coefficient 2 | MD   |       | Integer(3..9)                                | Refers to 'k' in the formula as specified in [4], Discontinuous reception. The default value is "same as DRX cycle length coefficient". | REL-7   |
| Time for DRX cycle 2           | MD   |       | Integer(80, 160, 320, 640, 1280, 2560, 5120) | Values in milliseconds. The default value is 0 ms.  | REL-7   |

### 10.3.3.50 Wait time

Wait time defines the time period the UE has to wait before repeating the rejected procedure.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description  |
|--------------------------------|------|-------|--------------------|--|
| Wait time                      | MP   |       | Integer(0..15)     | Wait time in seconds<br>The value 0 indicates that repetition is not allowed.<br>Wait time should be set to zero if the IE "Extended Wait Time" is present in the RRC Connection Reject message. |

### 10.3.3.51 UE Specific Behaviour Information 1 idle

This IE indicates the UE conformance typically for RRC connection establishment from idle mode.

| Information Element/Group name           | Need | Multi | Type and Reference | Semantics description |
|--|------|-------|--------------------|-----------------------|
| UE Specific Behaviour Information 1 idle | MP   |       | bit string(4)      |                       |

### 10.3.3.52 UE Specific Behaviour Information 1 interRAT

This IE indicates the UE conformance typically for RRC connection establishment from another RAT.

| Information Element/Group name               | Need | Multi | Type and Reference | Semantics description |
|--|------|-------|--------------------|-----------------------|
| UE Specific Behaviour Information 1 interRAT | MP   |       | bit string(8)      |                       |

### 10.3.3.53 UE based network performance measurements parameters

| Information Element/Group name          | Need | Multi | Type and Reference | Semantics description   | Version |
|---|------|-------|--------------------|---|---------|
| Support of Logged Measurements Idle PCH | OP   |       | Enumerated (TRUE)  | The absence of this IE indicates that the UE does not support logged measurements in Idle mode, URA_PCH or CELL_PCH states. | REL-10  |

## 10.3.4 Radio Bearer Information elements

### 10.3.4.0a Common RB mapping info

NOTE: For FDD and 1.28 Mcps TDD only.

A multiplexing option between a logical channel and a MAC-ehs queue.

| Information Element/Group name | Need | Multi | Type and reference         | Semantics description | Version |
|--------------------------------|------|-------|----------------------------|-----------------------|---------|
| Logical channel identity       | MP   |       | Integer(1..15)             | Note                  | REL-7   |
| MAC-ehs queue identity         | MP   |       | MAC-ehs Queue Id 10.3.5.7f |                       | REL-7   |

NOTE: the IE "Logical channel identity" conveys the value to be used in the "LCH-ID" field of the MAC-ehs header [15] associated with the MAC-ehs reordering queue identified by the IE "MAC-ehs queue identity".

### 10.3.4.0 Default configuration identity

This information element identifies a default radio parameter configuration. The corresponding default configurations are specified in subclause 13.7.

| Information Element/Group name   | Need                          | Multi  | Type and reference | Semantics description                      | Version |
|--|-------------------------------|--------|--------------------|--|---------|
| Default configuration identity   | MP                            |        | Integer (0..10,    | See NOTE 1                                 |         |
|  |                               |        | 11,                |  | REL-4   |
|  |                               |        | 13,                | Default configuration ID 2 is not used.    | REL-5   |
|  |                               |        | 12, 14, 15, 16     |  | REL-6   |
|  |                               |        | 17,                | Used only in RRC Connection Setup message. | REL-6   |
|  |                               |        | 18..22,            | See NOTE 1                                 | REL-6   |
|  |                               |        | 23,                | Used only in RRC Connection Setup message. | REL-9   |
|  |                               |        | 24,                |  | REL-10  |
| 25..31)  | Reserved for future extension | REL-10 |                    |  |         |
| NOTE 1: For TDD, default configuration identities 0, 1, 5, 6, 7 and 22 are only valid from REL-10. |                               |        |                    |  |         |

### 10.3.4.0a Default configuration for CELL\_FACH

This information element identifies a default radio parameter configuration for CELL\_FACH. The corresponding default configurations are specified in subclause 13.8.

| Information Element/Group name               | Need | Multi | Type and reference    | Semantics description   | Version |
|--|------|-------|-----------------------|---|---------|
| Default configuration mode                   | MP   |       | Enumerated (FDD, TDD) | Indicates whether the FDD or TDD version of the default configuration shall be used | REL-8   |
| Default configuration identity for CELL_FACH | MP   |       | Integer (0,           |   | REL-8   |
|  |      |       | 1..15)                | Reserved for future extension   | REL-8   |

#### 10.3.4.1 Downlink RLC STATUS info

| Information Element/Group name | Need                    | Multi | Type and reference                                     | Semantics description  | Version |
|--------------------------------|-------------------------|-------|--|--|---------|
| Timer_Status_Prohibit          | OP                      |       | Integer(10..50 by step of 10, 550..1000 by step of 50) | Minimum time in ms between STATUS reports  |         |
| Missing PDU Indicator          | MP                      |       | Boolean  | Value TRUE indicates that UE should send a STATUS report for each missing PDU that is detected                 |         |
| Timer_STATUS_periodic          | OP                      |       | Integer(100, 200, 300, 400, 500, 750, 1000, 2000)      | Time in milliseconds   |         |
| Timer_Reordering               | CV-<br><i>Multiflow</i> |       | Integer(50,100,150,200,400,600,800,1000)               | Time in milliseconds for which a UE should wait upon encountering a gap in the RLC sequence numbers.<br>NOTE1. | REL-11  |

NOTE1: If this IE is included for SRB0 or SRB1, then the UE behaviour is unspecified.

| Condition        | Explanation  |
|------------------|--|
| <i>Multiflow</i> | The IE is optional when the Multiflow operation is configured, otherwise it is not needed. |

#### 10.3.4.1a PDCP context relocation info

This information element indicates that the header compression context relocation is to be performed during SRNS relocation for the given radio bearer.

| Information Element/Group name                  | Need | Multi | Type and reference    | Semantics description   | Version |
|---|------|-------|-----------------------|---|---------|
| RB identity                                     | MP   |       | RB identity 10.3.4.16 |   | REL-5   |
| Downlink RFC 3095 context relocation indication | MP   |       | Boolean               | TRUE means RFC 3095 context relocation is performed in downlink | REL-5   |
| Uplink RFC 3095 context relocation indication   | MP   |       | Boolean               | TRUE means RFC 3095 context relocation is performed in uplink   | REL-5   |

### 10.3.4.2 PDCP info

The purpose of the PDCP info IE is to indicate which algorithms shall be established and to configure the parameters of each of the algorithms.

| Information Element/Group name  | Need                        | Multi                  | Type and reference           | Semantics description   | Version |
|---|-----------------------------|------------------------|------------------------------|---|---------|
| Support for lossless SRNS relocation or for lossless DL RLC PDU size change | CV- <i>LosslessCriteria</i> |                        | Boolean                      | TRUE means support  |         |
| Max PDCP SN window size   | CV- <i>Lossless</i>         |                        | Enumerated(sn255, sn65535)   | Maximum PDCP sequence number window size. The handling of sequence number when the Max PDCP SN window size is 255 is specified in [23]. |         |
| PDCP PDU header   | MP                          |                        | Enumerated (present, absent) | Whether a PDCP PDU header is existent or not.   |         |
| Header compression information  | OP                          | 1 to <maxPDCPAlgoType> |                              |   |         |
| >CHOICE <i>algorithm type</i>   | MP                          |                        |                              | Note 1  |         |
| >>RFC 2507  |                             |                        |                              | Header compression according to IETF standard RFC 2507  |         |
| >>>F_MAX_PERIOD   | MD                          |                        | Integer (1..65535)           | Largest number of compressed non-TCP headers that may be sent without sending a full header. Default value is 256.                      |         |
| >>>F_MAX_TIME   | MD                          |                        | Integer (1..255)             | Compressed headers may not be sent more than F_MAX_TIME seconds after sending last full header. Default value is 5.                     |         |
| >>>MAX_HEADER   | MD                          |                        | Integer (60..65535)          | The largest header size in octets that may be   |         |

| Information Element/Group name  | Need | Multi                   | Type and reference  | Semantics description  | Version |
|---------------------------------|------|-------------------------|---|--|---------|
|                                 |      |                         |   | compressed.<br>Default value is 168.   |         |
| >>>TCP_SPACE                    | MD   |                         | Integer (3..255)  | Maximum CID value for TCP connections.<br>Default value is 15.   |         |
| >>>NON_TCP_SPACE                | MD   |                         | Integer (3..65535)  | Maximum CID value for non-TCP connections.<br>Default value is 15.   |         |
| >>>EXPECT_REORDERING            | MD   |                         | Enumerated (reordering not expected, reordering expected) | Whether the algorithm shall reorder PDCP SDUs or not.<br>Default value is "reordering not expected".                 |         |
| >>RFC 3095                      |      |                         |   | Header compression according to IETF ROHC standard [83], [84].   | REL-4   |
| >>>Profiles                     | MP   | 1 to <maxROHC-Profiles> |   | Profiles supported by both compressor and decompressor in both UE and UTRAN. Profile 0 shall always be supported.    | REL-4   |
| >>>>Profile instance            | MP   |                         | Integer(1.. 3)  | 1 = 0x0001, 2 = 0x0002, 3 = 0x0003 (see [52])  | REL-4   |

| Poll_SDU                       | OP   |       | Integer(1,4,16,64)                                     | Number of SDUs, interval between pollings                             |
| Last transmission PDU poll     | MP   |       | Boolean  | TRUE indicates that poll is made at last PDU in transmission buffer   |
| Last retransmission PDU poll   | MP   |       | Boolean  | TRUE indicates that poll is made at last PDU in retransmission buffer |
| Poll_Window                    | OP   |       | Integer(50,60,70,80,85,90,95,99)                       | Percentage of transmission window, threshold for polling              |
| Timer_poll_periodic            | OP   |       | Integer(100, 200, 300, 400, 500, 750, 1000, 2000)      | Time in milliseconds Timer for periodic polling.                      |

## 10.3.4.5 Predefined configuration identity

This information element identifies a pre - defined radio parameter configuration.

| Information Element/Group name          | Need | Multi | Type and reference | Semantics description |
|---|------|-------|--------------------|-----------------------|
| Predefined radio configuration identity | MP   |       | Integer (0..15)    |                       |

## 10.3.4.5a Predefined configuration status information

Another system may provide the UE with one or more predefined UTRAN configurations, comprising of radio bearer, transport channel and physical channel parameters. If requested, the UE shall indicate the configurations it has stored. The predefined configuration status information should include the following RRC information.

| Information Element/Group name      | Need | Multi                | Type and reference                          | Semantics description   |
|-------------------------------------|------|----------------------|---|---|
| <b>RB information elements</b>      |      |                      |   |   |
| Predefined configurations           |      | maxPredefConfigCount |   | The list is in order of preconfiguration identity                               |
| >Predefined configuration value tag | OP   |                      | Predefined configuration value tag 10.3.4.6 | The UE shall include the value tag if it has stored the concerned configuration |

| Multi Bound          | Explanation                                 |
|----------------------|---|
| MaxPredefConfigCount | Maximum number of predefined configurations |

### 10.3.4.5b Predefined configuration status information compressed

Another system may provide the UE with one or more predefined UTRAN configurations, comprising of radio bearer, transport channel and physical channel parameters. If requested, the UE shall indicate the configurations it has stored. The compressed predefined configuration status information should include the following RRC information.

| Information Element/Group name                           | Need | Multi                  | Type and reference                           | Semantics description   | Version |
|--|------|------------------------|--|---|---------|
| Sets with different value tags                           | MP   |                        |  |   | REL-5   |
| >Pre-defined configuration set with different value tags | MP   | 1..2                   |  |   | REL-5   |
| >>Start position   | MD   |                        | INTEGER (0..10)                              | Default value is 0, corresponding with the first pre-defined configuration. The pre-defined configuration where the consecutive sequence of pre-defined configurations begins.  | REL-5   |
| >>Pre-defined configuration value tag list               | MP   | 6..<max PredefC onfig> | Pre-defined configuration value tag 10.3.4.6 | Value Tags for each pre-defined configuration starting from the lowest.   | REL-5   |
| Other Entries  | OP   |                        |  |   | REL-5   |
| >Pre-defined configuration list with variable size       | MP   | 1..<max PredefC onfig> |  | List of other pre-defined configurations not included within the Sets with different value tags, in consecutive order starting with the lowest. If there are stored pre-defined configurations positioned after a pre-defined configuration that is not stored, the UE shall indicate the not-stored pre-defined configuration by explicitly indicating it to be absent. If there are no stored pre-defined configurations positioned after a pre-defined configuration that is not stored, then the UE may totally omit these pre-defined configurations from the IE, i.e. reduce the size of the list to correspond to the last position that contained a stored pre-defined configuration. | REL-5   |
| >>Predefined configuration value tag                     | OP   |                        | Predefined configuration value tag 10.3.4.6  | The UE shall include the value tag if it has stored the concerned configuration   | REL-5   |

### 10.3.4.6 Predefined configuration value tag

This information element is used to identify different versions of a radio bearer configuration as may be used within one PLMN e.g. to support different UTRAN implementations.

| Information Element/Group name     | Need | Multi | Type and Reference | Semantics description |
|------------------------------------|------|-------|--------------------|-----------------------|
| Predefined configuration value tag | MP   |       | Integer(0..15)     |                       |

### 10.3.4.7 Predefined RB configuration

This information element concerns a pre- defined configuration of radio bearer parameters

| Information Element/Group name             | Need | Multi              | Type and Reference                              | Semantics description            |

### 10.3.4.8 RAB info

This IE contains information used to uniquely identify a radio access bearer.

| Information Element/Group name  | Need           | Multi | Type and reference                         | Semantics description  | Version |
|---|----------------|-------|--|--|---------|
| RAB identity  | MP             |       | RAB identity<br>10.3.1.14                  |  |         |
| MBMS Service Identity   | CV-<br>Message |       | MBMS service ID<br>10.3.9a.8a              | Included when establishing a RB for a MBMS service of the broadcast type; NOTE 1 | REL-6   |
| MBMS Session identity   | CV-<br>Message |       | MBMS Session identity<br>10.3.9a.9         |  | REL-6   |
| CN domain identity  | MP             |       | CN domain identity<br>10.3.1.1             |  |         |
| NAS Synchronization Indicator   | OP             |       | NAS Synchronization indicator<br>10.3.4.12 |  |         |
| Re-establishment timer  | MP             |       | Re-establishment timer<br>10.3.3.30        |  |         |
| NOTE 1: Only the "MBMS Service ID" part of the MBMS service identity is signalled in this IE. The UE should consider that the "PLMN identity" part of the MBMS service identity equals the PLMN identity of an MBMS service with the same "MBMS Service ID" stored in the variable ACTIVATED_MBMS_SERVICES. If there is no such MBMS service or more than one such MBMS service, the UE behaviour is unspecified. |                |       |  |  |         |

| Condition      | Explanation   |
|----------------|---|
| <i>Message</i> | This IE is optionally present in the RADIO BEARER SETUP and the SRNS RELOCATION INFO messages and not needed otherwise. |

### 10.3.4.9 RAB info Post

This IE contains information used to uniquely identify a radio access bearer.

| Information Element/Group name | Need | Multi | Type and reference                                | Semantics description |

| MBMS Session Identity          | OP   |       | MBMS<br>Session<br>identity<br>10.3.9a.9 | Indicates that this<br>radio bearer is<br>used for a<br>different session<br>of the MBMS<br>service. | REL-7   |

## 10.3.4.10 RAB information for setup

| Information Element/Group name | Need     | Multi               | Type and reference                              | Semantics description   | Version |
|--------------------------------|----------|---------------------|---|---|---------|
| RAB info                       | MP       |                     | RAB info 10.3.4.8                               |   |         |
| CS-HSPA information            | CV-CS    |                     |   |   | REL-8   |
| >UL AMR rate                   | MD       |                     | Enumerated (t0, t1, t2, t3, t4, t5, t6, t7, t8) | Indicates the bit rate as defined in [62] and [63]. In case NAS Synchronization Indicator indicates AMR, default value is "t7". In case NAS Synchronization Indicator indicates AMR-WB, default value is "t8". 7 spare values are needed. | REL-8   |
| >Max CS delay                  | MP       |                     | Integer (20..200 by step of 10)                 | Indicates the maximum possible delay for CS voice frames Unit is ms   | REL-8   |
| RAB info to replace            | CV-SRVCC |                     | RAB info to replace 10.3.4.11a                  |   | REL-8   |
| RB information to setup list   | MP       | 1 to <maxRBpe rRAB> |   |   |         |
| >RB information to setup       | MP       |                     | RB information to setup 10.3.4.20               |   |         |

| Condition | Explanation  |
|-----------|--|
| CS        | This IE is mandatory if the IE "CN domain identity" has the value "CS domain" and the RAB is mapped on HS-DSCH/E-DCH. It is not needed otherwise.                |
| SRVCC     | This IE is mandatory if the RAB is established as part of an SR-VCC procedure and the message is not HANDOVER TO UTRAN COMMAND message and not needed otherwise. |

## 10.3.4.11 RAB information to reconfigure

| Information Element/Group name | Need  | Multi | Type and reference                             | Semantics description   | Version |
|--------------------------------|-------|-------|--|---|---------|
| RAB identity                   | MP    |       | RAB Identity 10.3.1.14                         |   |         |
| CN domain identity             | MP    |       | CN domain identity 10.3.1.1                    |   |         |
| NAS synchronization indicator  | MP    |       | NAS Synchronization info 10.3.4.12             | Note 1  |         |
| CS-HSPA information            | CV-CS |       |  |   | REL-8   |
| >UL AMR rate                   | MD    |       | Enumerated(t0, t1, t2, t3, t4, t5, t6, t7, t8) | Indicates the bit rate as defined in [62] and [63]. In case NAS Synchronization Indicator indicates AMR, default value is "t7". In case NAS Synchronization Indicator indicates AMR-WB, default value is "t8". 7 spare values are needed. | REL-8   |
| >Max CS delay                  | MP    |       | Integer(20..200 by step of 10)                 | Indicates the maximum possible delay for CS voice frames Unit is ms   | REL-8   |

| Condition | Explanation   |
|-----------|---|
| CS        | This IE is mandatory if the IE "CN domain identity" has the value "CS domain" and the RAB is mapped on HS-DSCH/E-DCH. It is not needed otherwise. |

NOTE 1: This IE is only relevant for the CS domain.

## 10.3.4.11a RAB info to replace

This IE contains information to identify a radio access bearer to be replaced with a new radio access bearer as part of SR-VCC procedures. This IE is not included in case SR-VCC from LTE to UMTS.

| Information Element/Group name | Need | Multi | Type and reference          | Semantics description | Version |
|--------------------------------|------|-------|-----------------------------|-----------------------|---------|
| RAB identity                   | MP   |       | RAB identity 10.3.1.14      |                       | REL-8   |
| CN domain identity             | MP   |       | CN domain identity 10.3.1.1 |                       | REL-8   |

## 10.3.4.12 NAS Synchronization indicator

A container for non-access stratum information to be transferred transparently through UTRAN.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description  |
|--------------------------------|------|-------|--------------------|--|
| NAS Synchronization indicator  | MP   |       | Bit string(4)      | The first/leftmost bit of the bit string contains the most significant bit of the NAS Synchronization indicator. |

#### 10.3.4.13 RB activation time info

This IE contains the time, in terms of RLC sequence numbers, when a certain configuration shall be activated, for a number of radio bearers.

| Information Element/Group name | Need | Multi        | Type and reference    | Semantics description                                       |
|--------------------------------|------|--------------|-----------------------|---|
| Radio bearer activation time   | MP   | 1 to <maxRB> |                       |   |
| >RB identity                   | MP   |              | RB identity 10.3.4.16 |   |
| >RLC sequence number           | MP   |              | Integer (0..4095)     | RLC SN [16]. Used for radio bearers mapped on RLC AM and UM |

#### 10.3.4.14 RB COUNT-C MSB information

The MSB of the COUNT-C values of the radio bearer.

| Information Element/Group name | Needed | Multi | Type and reference        | Semantics description                      |
|--------------------------------|--------|-------|---------------------------|--|
| RB identity                    | MP     |       | RB identity 10.3.4.16     |  |
| COUNT-C-MSB-uplink             | MP     |       | Integer (0.. $2^{25}-1$ ) | 25 MSBs from COUNT-C associated to this RB |
| COUNT-C-MSB-downlink           | MP     |       | Integer (0.. $2^{25}-1$ ) | 25 MSBs from COUNT-C associated to this RB |

#### 10.3.4.15 RB COUNT-C information

The COUNT-C values of the radio bearer.

| Information Element/Group name | Needed | Multi | Type and reference        | Semantics description |
|--------------------------------|--------|-------|---------------------------|-----------------------|
| RB identity                    | MP     |       | RB identity 10.3.4.16     |                       |
| COUNT-C-uplink                 | MP     |       | Integer (0.. $2^{32}-1$ ) |                       |
| COUNT-C-downlink               | MP     |       | Integer (0.. $2^{32}-1$ ) |                       |

#### 10.3.4.16 RB identity

An identification number for the radio bearer affected by a certain message.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description  |
|--------------------------------|------|-------|--------------------|--|
| RB identity                    | MP   |       | Integer(1..32)     | Values 1-4 shall only be used for signalling radio bearers. The IE value minus one shall be used as BEARER in the ciphering algorithm. |

## 10.3.4.17 RB information to be affected

| Information Element/Group name | Need | Multi | Type and reference              | Semantics description |
|--------------------------------|------|-------|---------------------------------|-----------------------|
| RB identity                    | MP   |       | RB identity<br>10.3.4.16        |                       |

|--------------------------------|------|---------------|--|------------------------------|
| Removal TFCI information       | MP   | 1 to <maxTFC> |  |                              |
| >TFCI                          | MP   |               | Transport Format Combination (TFC) 10.3.5.19 | In TDD 0 is a reserved value |

### 10.3.5.17 Void

### 10.3.5.18 Transport channel identity

This information element is used to distinguish transport channels. Transport channels of different type (RACH, USCH, FACH/PCH, DSCH or DCH) have separate series of identities. This also holds for uplink and downlink transport channel identities (i.e. for DCH). Depending on in which context a transport channel identity  $n$  that is sent, it will have different meaning

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|--------------------|-----------------------|
| Transport channel identity     | MP   |       | Integer(1..32)     |                       |

### 10.3.5.19 Transport Format Combination (TFC)

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|--------------------|-----------------------|
| Transport format combination   | MP   |       | Integer (0..1023)  |                       |

### 10.3.5.20 Transport Format Combination Set

Indicates the allowed combinations of already defined Transport formats and the mapping between these allowed TFCs and the corresponding TFCI values.

For TDD, different coded composite transport channels have independent transport format combination sets and thus independent TFCI values.

| Information Element/Group name | Need | Multi | IE type and reference                 | Semantics description |
|--------------------------------|------|-------|---------------------------------------|-----------------------|
| TFCI Field 1 Information       | MP   |       | TFCS explicit Configuration 10.3.5.13 |                       |

### 10.3.5.21 Transport Format Combination Set Identity

NOTE: Only for TDD.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description   |
|--------------------------------|------|-------|--------------------|---|
| TFCS ID                        | MD   |       | Integer (1..8)     | Indicates the identity of every TFCS within a UE. Default value is 1. |
| Shared Channel Indicator       | MP   |       | Boolean            | TRUE indicates the use of   |

|  |  |  |  |                                    |
|--|--|--|--|------------------------------------|
|  |  |  |  | shared channels. Default is FALSE. |
|--|--|--|--|------------------------------------|

### 10.3.5.22 Transport Format Combination Subset

Indicates which Transport format combinations in the already defined Transport format combination set are allowed.

| Information Element/Group name                      | Need | Multi           | Type and reference                     | Semantics description |

NOTE 3: For FDD, E-DCH MAC-d flow identity 7 is reserved for CCCH transmission.

## 10.3.6 Physical CH Information elements

### 10.3.6.1 AC-to-ASC mapping

| Information Element/Group name | Need | Multi     | Type and reference | Semantics description   |
|--------------------------------|------|-----------|--------------------|---|
| AC-to-ASC mapping table        | MP   | maxASCmap |                    |   |
| >AC-to-ASC mapping             | MP   |           | Integer(0..7)      | Mapping of Access Classes to Access Service Classes (see subclause 8.5.13.) |

### 10.3.6.2 AICH Info

NOTE: Only for FDD.

| Information Element/Group name | Need | Multi | Type and reference          | Semantics description                          |
|--------------------------------|------|-------|-----------------------------|--|
| Channelisation code            | MP   |       | Integer(0..255)             | SF is fixed and equal to 256                   |
| STTD indicator                 | MP   |       | STTD Indicator<br>10.3.6.78 |  |
| AICH transmission timing       | MP   |       | Enumerated<br>(0, 1)        | See parameter AICH_Transmission_Timing in [26] |

### 10.3.6.3 AICH Power offset

NOTE: Only for FDD.

This parameter is used to indicate the power level of AICH channel. This is the power per transmitted Acquisition Indicator, Extended Acquisition Indicator minus power of the Primary CPICH.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|--------------------|-----------------------|
| AICH Power offset              | MP   |       | Integer(-22..+5)   | Offset in dB          |

### 10.3.6.4 Allocation period info

NOTE: Only for TDD.

Parameters used by UE to determine period of shared channel allocation.

| Information Element/Group name | Need | Multi | Type and reference  | Semantics description                             |
|--------------------------------|------|-------|---------------------|---|
| Allocation Activation Time     | MP   |       | Integer<br>(0..255) | Start the allocation period at the given CFN.     |
| Allocation Duration            | MP   |       | Integer<br>(1..256) | Total number of frames for the allocation period. |

## 10.3.6.5 Alpha

| Information Element/Group name | Need | Multi | Type and reference                                  | Semantics description |
|--------------------------------|------|-------|---|-----------------------|
| Alpha Value                    | MP   |       | Enumerated(0, 1/8, 2/8, 3/8, 4/8, 5/8, 6/8, 7/8, 1) |                       |

## 10.3.6.6 ASC setting

| Information Element/Group name              | Need | Multi | Type and reference | Semantics description  | Version |
|---|------|-------|--------------------|--|---------|
| CHOICE <i>mode</i>                          | MP   |       |                    |  |         |
| >FDD  |      |       |                    |  |         |

### 10.3.6.11 Constant value

NOTE: Only for FDD.

This constant value is used by the UE to calculate the initial output power on PRACH according to the Open loop power control procedure.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|--------------------|-----------------------|
| Constant value                 | MP   |       | Integer (-35..-10) | ln dB                 |

### 10.3.6.11a Constant value TDD

NOTE: Only for 3.84 Mcps TDD and 7.68 Mcps TDD.

3.84 Mcps TDD and 7.68 Mcps TDD constant values are used for open loop power control of PRACH, USCH, HS-SICH and UL DPCH as defined in subclause 8.5.7.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|--------------------|-----------------------|
| TDD Constant value             | MP   |       | Integer (-35..+10) | ln dB                 |

10.3.6.12 Void

10.3.6.13 Void

10.3.6.14 Void

10.3.6.15 Void

### 10.3.6.16 Default DPCH Offset Value

Indicates the default offset value within interleaving size at a resolution of 512chip (1/5 slot) in FDD and a resolution of one frame in TDD to offset CFN in the UE. This is used to distribute discontinuous transmission periods in time and also to distribute NodeB-RNC transmission traffics in time. Even though the CFN is offset by DOFF, the start timing of the interleaving will be the timing that "CFN mod (interleaving size)"=0 (e.g. interleaving size: 2,4,8) in both UE and SRNC.

| Information Element/Group name     | Need | Multi | Type and reference                 | Semantics description                                |

|----------------|--|
| <i>Message</i> | This IE is not needed if the IE "Downlink DPCH info common for all RL" is included in RRC CONNECTION SETUP or HANDOVER TO UTRAN COMMAND messages. Otherwise it is optional.  |
| <i>Synch</i>   | The IE is not needed in the CELL UPDATE CONFIRM, HANDOVER TO UTRAN COMMAND and the RRC CONNECTION SETUP messages or if the IE "Timing Indication" is set to "Initialise" or if the IE "Frequency Info" is not included. Otherwise, it is optional. |

NOTE: Within the HANDOVER TO UTRAN COMMAND message, only value "initialise" is applicable.

| >Transport Block Size List   | MP | 1 to 2 |                 |   | REL-8 |
| >>Transport Block Size Index | MP |        | Integer (1..32) | Index of value range 1 to 32 of the MAC-ehs transport block size as described in Table 9.2.3.3.8 [15] | REL-8 |

NOTE 1: The IE is not signalled when the "PICH info" is present in "Secondary CCPCH system information" in SIB5 and SIB6.

NOTE 2: HS-PDSCH channelisation codes are allocated contiguously from a signalled start code to a signalled stop code, and the allocation includes both the start and stop code. If a value of Start code = 16 and Stop code = 1 is signalled, a spreading factor of SF=1 shall be used for the HS-PDSCH resources.

NOTE 3: The timing between PICH and the paging associated HS-PDSCH is specified in [30]. UE should receive the HS-PDSCH based on the timing specification.

### 10.3.6.36e HS-SCCH system info

These parameters enable the UE to receive transmission on HSDPA cell resources, when the UE is not in CELL\_DCH.

NOTE: for FDD only.

| Information Element/Group name          | Need | Multi              | Type and reference                     | Semantics description   | Version |

| Condition        | Explanation  |
|------------------|--|
| <i>Multiflow</i> | The IE is optional when the Multiflow operation is configured, otherwise it is not needed. |

## 10.3.6.41 Midamble shift and burst type

NOTE: Only for TDD.

This information element indicates burst type and midamble allocation. Three different midamble allocation schemes exist:

- Default midamble: the midamble shift is selected by layer 1 depending on the associated channelisation code (DL and UL)
- Common midamble: the midamble shift is chosen by layer 1 depending on the number of channelisation codes (possible in DL only)
- UE specific midamble: a UE specific midamble is explicitly assigned (DL and UL).

| Condition           | Explanation  |
|---------------------|--|
| <i>SIB5-MD</i>      | The information element is present only in SIB 5 and in SIB5bis. In SIB 5 and in SIB 5bis it is mandatory with default.              |
| <i>Add-RACH-TFS</i> | The information element is MP if the IE "Additional RACH TFS for CCCH" is included. Otherwise the information element is not needed. |

NOTE: If the setting of the PRACH information results in that a combination of a signature, preamble scrambling code and subchannel corresponds to a RACH with different TFS and/or TFCS, then for that combination only the TFS/TFCS of the PRACH listed first is valid, where PRACHs listed in System Information Block type 5 or 5bis shall be counted first.

### 10.3.6.56 Predefined PhyCH configuration

This information element concerns a pre- defined configuration of physical channel parameters.

For 1.28 Mcps TDD only

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|-------|--------------------|-----------------------|---------|
| CHOICE MU-MIMO info            | MP   |       |                    |                       | REL-10  |

| Information Element/Group name | Need               | Multi | Type and reference                                 | Semantics description  | Version |
|--------------------------------|--------------------|-------|--|--|---------|
| >Continue                      |                    |       | (no data)  |  | REL-10  |
| >New configuration             |                    |       |  |  | REL-10  |
| >>MU-MIMO operation            | MP                 |       | Enumerated (Uplink, Downlink, Uplink and Downlink) | One spare value is needed.   | REL-10  |
| >>>Standalone midamble info    | OP                 |       |  |  | REL-10  |
| >>>Midamble configuration      | MP                 |       | Integer (2, 4, 6, 8, 10, 12, 14, 16)               | Midamble Allocation mode is UE specific midamble allocation  | REL-10  |
| >>>Midamble shift              | MP                 |       | Integer (0..15)                                    | The allocated midamble shift.  | REL-10  |
| >>>Timeslot information        | MP                 |       | Bit string (5)                                     | Each bit indicates availability of a timeslot, where the timeslot is numbered "Timeslot 1" to "Timeslot 5". The value 1 of a bit indicates that the corresponding timeslot is available. "Timeslot 1" is the first/leftmost bit of the bit string. | REL-10  |
| >>>Activation time             | MP                 |       | Activation time 10.3.3.1                           | Specifies the standalone midamble channel Offset in Radio Frame level.   | REL-10  |
| >>>Subframe number             | MP                 |       | Integer (0..1)                                     | Specifies the standalone midamble channel Offset in subframe level.  | REL-10  |
| >>>Repetition period           | MP                 |       | Enumerated (1, 2, 4, 8, 16, 32, 64)                | Value 1 indicates continuous, in subframe level. One spare value is needed.  | REL-10  |
| >>>Reference beta              | <i>CV-UL_E-DCH</i> |       | Integer (-15..16)                                  | In dB.   | REL-10  |

| Condition       | Explanation   |
|-----------------|---|
| <i>UL_E-DCH</i> | This IE is mandatory present if IE "uplink transport channel type" is equal to "E-DCH". Otherwise it is not needed. |

### 10.3.6.123 E-RGCH Info for Common E-DCH

Includes the configuration for the E-DCH related Relative Grant Channel to be used with common E-DCH in CELL\_FACH and Idle mode. The E-RGCH is using the same channelisation code as configured for the E-HICH channel (see subclause 10.3.6.124).

| Information Element/Group name  | Need | Multi | Type and reference | Semantics description | Version |
|---|------|-------|--------------------|-----------------------|---------|
| Signature Sequence  | MD   |       | Integer(0..39)     | NOTE1                 | REL-8   |
| NOTE1: The default value is defined by:<br>Signature Sequence = (offset + common E-DCH resource list position) mod 40<br>where "offset" is the value of the last occurrence of the IE "Signature Sequence". If "Signature Sequence" is not present in the first occurrence, "offset" is equal to zero.<br>"common E-DCH resource list position" indicates the Common E-DCH resource Configuration Information number by order of appearance. The value of the "common E-DCH resource list position" is zero for the first occurrence. |      |       |                    |                       |         |

### 10.3.6.124 E-HICH Info for Common E-DCH

Includes the configuration for the E-DCH related HARQ Acknowledgement Indicator Channel.

| Information Element/Group name  | Need     | Multi | Type and reference | Semantics description  | Version |
|---|----------|-------|--------------------|--|---------|
| Channelisation Code   | CV-Short |       | Integer (0..127)   | If this IE is not present, the value is equal to the last occurrence of this IE. | REL-8   |
| Signature Sequence  | MD       |       | Integer (0..39)    | NOTE1  | REL-8   |
| NOTE1: The default value is defined by:<br>Signature Sequence = (offset + common E-DCH resource list position) mod 40<br>where "offset" is the value of the last occurrence of the IE "Signature Sequence". If "Signature Sequence" is not present in the first occurrence, "offset" is equal to zero.<br>"common E-DCH resource list position" indicates the Common E-DCH resource Configuration Information number by order of appearance. The value of the "common E-DCH resource list position" is zero for the first occurrence. |          |       |                    |  |         |

| Condition    | Explanation  |
|--------------|--|
| <i>Short</i> | This IE is mandatory present for the first occurrence. Otherwise, this IE is optional. |

### 10.3.6.125 Uplink CLTD info FDD

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description | Version |
|--------------------------------|------|-------|--------------------|-----------------------|---------|
|--------------------------------|------|-------|--------------------|-----------------------|---------|

|                                 |                          |  |  |  |        |
|---------------------------------|--------------------------|--|--|--|--------|
| CHOICE Configuration info       | MP                       |  |  |  | REL-11 |
| >Continue                       |                          |  | (no data)                              | Used in reconfigurations without interruption of uplink CLTD operation.                | REL-11 |
| >New configuration              |                          |  |  |  |        |
| >>S-DPCCH info                  | MP                       |  |  |  | REL-11 |
| >>>S-DPCCH/DPCCH power offset   | MP                       |  | Integer (0..6)                         | Refer to quantization of the power offset in [28].                                     | REL-11 |
| >>Initial CLTD activation state | CV-<br><i>InitConfig</i> |  | Enumerated (first state, second state) | Indicates the CLTD activation state as described in [27].                              | REL-11 |
| >>>Primary CPICH info           | CV-<br><i>DCHOnly</i>    |  | Primary CPICH Info 10.3.6.60           | Indicates the cell that determines the precoding weights amongst the active set cells. | REL-11 |

| Condition         | Explanation   |
|-------------------|---|
| <i>DCHOnly</i>    | This IE is mandatory present if HS-DSCH is not configured and only DCH is configured. Otherwise it is not needed. |
| <i>InitConfig</i> | This IE is mandatory present in the initial uplink CLTD configuration. Otherwise it is optional.                  |

### 10.3.6.126 Uplink OLTD info FDD

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|-------|--------------------|-----------------------|---------|
| Uplink OLTD activation         | MP   |       | Enumerated (TRUE)  |                       | REL-11  |

### 10.3.6.127 F-TPICH info

NOTE: Only for FDD.

| Information Element/Group name | Need | Multi | Type and reference                | Semantics description   | Version |
|--------------------------------|------|-------|-----------------------------------|---|---------|
| F-TPICH slot format            | MP   |       | Integer (0..9)                    | Slot format used by F-TPICH in [26].  | REL-11  |
| F-TPICH code number            | MP   |       | Integer (0..255)                  |   | REL-11  |
| F-TPICH frame offset           | MP   |       | Integer (0..38144 by step of 256) | Offset (in number of chips) between the beginning of the P-CCPCH frame and the beginning of the F-TPICH frame. This is called $\tau_{F-TPICH,m}$ in [26]. | REL-11  |

NOTE: The UTRAN should configure the F-TPICH info either only for the RL transmitted from the cell which determines the precoding weights, or for all the RL(s) within the RLS that the cell which determines the precoding weights belongs to, otherwise the UE behaviour is not specified.

## 10.3.6.128 F-TPICH reconfiguration info

NOTE: Only for FDD.

| Information Element/Group name                              | Need | Multi           | Type and reference              | Semantics description   | Version |
|---|------|-----------------|---------------------------------|---|---------|
| F-TPICH info new cell that determines the precoding weights | OP   |                 |                                 | This IE is not present if the cell is added to the active set with this message.  | REL-11  |

### 10.3.7.19 Inter-frequency measurement reporting criteria

The triggering of the event-triggered reporting for an inter-frequency measurements. All events concerning inter-frequency measurements are labelled 2x where x is a,b,c, ...

Event 2a: Change of best frequency.

Event 2b: The estimated quality of the currently used frequency is below a certain threshold **and** the estimated quality of a non-used frequency is above a certain threshold.

Event 2c: The estimated quality of a non-used frequency is above a certain threshold.

Event 2d: The estimated quality of the currently used frequency is below a certain threshold.

Event 2e: The estimated quality of a non-used frequency is below a certain threshold.

Event 2f: The estimated quality of the currently used frequency is above a certain threshold.

| >>None                                  |                    |                    | (no data)  | This value has been introduced to handle the case when IE "New inter-RAT cells" is not required                           |         |
| Cell for measurement                    | OP                 | 1 to <maxCellMeas> |  |   |         |
| >Inter-RAT cell id                      | MP                 |                    | Integer(0 .. <maxCellMeas>-1)  |   |         |
| Inter-RAT cell info indication          | CV- <i>Message</i> |                    | Integer (0..3)   | NOTE 1 and 2  | REL-5   |

| Condition      | Explanation   |
|----------------|---|
| <i>Message</i> | The IE is optionally present in the MEASUREMENT CONTROL and in the SRNS RELOCATION INFO messages, otherwise the IE is not needed. |

NOTE 1: The UTRAN may choose not to use the "Inter-RAT cell info indication" value "0" in the MEASUREMENT CONTROL message, to distinguish that case from those cases where the UE receives the IE "Inter-RAT cell info list" in SIB11 or SIB12.

NOTE 2: In case of an SRNS relocation, if the UE has been sent the "Inter-RAT cell info indication" in the MEASUREMENT CONTROL message and the IE "Inter-RAT cell info list" is included in the SRNS RELOCATION INFO sent from the source RNC to the target RNC, the "Inter-RAT cell info indication" should be included in the IE "Inter-RAT cell info list".

NOTE 3: If the UTRAN configures a UE with a "Inter-RAT cell info list" containing a set of GSM cells where one or more cell(s) belong to DCS 1800 band and one or more cell(s) belong to PCS 1900 band, the UE behaviour is unspecified.

### 10.3.7.24 Inter-RAT event identity

### 10.3.7.30 Inter-RAT measurement reporting criteria

The triggering of the event-triggered reporting for an inter-RAT measurement. All events concerning inter-RAT measurements are labelled 3x where x is a,b,c, ...

Event 3a: The estimated quality of the currently used UTRAN frequency is below a certain threshold **and** the estimated quality of the other system is above a certain threshold.

Event 3b: The estimated quality of other system is below a certain threshold.

Event 3c: The estimated quality of other system is above a certain threshold.

Event 3d: Change of best cell in other system.

| Information Element/Group name     | Need        | Multi                | Type and reference                    | Semantics description  |

| Condition        | Explanation  |
|------------------|--|
| <i>reporting</i> | This IE is optional if the CHOICE " <i>report criteria</i> " is equal to "periodical reporting criteria" or "No reporting", otherwise the IE is not needed |

NOTE 1: The IE "report criteria" is optional in all releases except Rel-6. In Rel-6 the IE "report criteria" is mandatory present in order to align the tabular format with the Rel-6 ASN.1.

### 10.3.7.37 Intra-frequency measurement event results

This IE contains the measurement event results that are reported to UTRAN for intra-frequency measurements.

| Information Element/Group name | Need | Multi | Type and reference                          | Semantics description | Version |
|--------------------------------|------|-------|---|-----------------------|---------|

### 10.3.7.39 Intra-frequency measurement reporting criteria

The triggering of the event-triggered reporting for an intra-frequency measurement. All events concerning intra-frequency measurements are labelled 1x where x is a, b, c....

Event 1a: A Primary CPICH enters the Reporting Range (FDD only).

Event 1b: A Primary CPICH leaves the Reporting Range (FDD only).

Event 1c: A Non-active Primary CPICH becomes better than an active Primary CPICH (FDD only).

Event 1d: Change of best cell (FDD only).

Event 1e: A Primary CPICH becomes better than an absolute threshold (FDD only).

Event 1f: A Primary CPICH becomes worse than an absolute threshold (FDD only).

Event 1g: Change of best cell in TDD.

Event 1h: Timeslot ISCP below a certain threshold (TDD only).

Event 1i: Timeslot ISCP above a certain threshold (TDD only).

Event 1j: A Non-active E-DCH but active DCH Primary CPICH becomes better than an active E-DCH Primary CPICH (FDD only).

## 10.3.7.44 Measured results

Contains the measured results of the quantity indicated optionally by Reporting Quantity in Measurement Control. "Measured results" can be used for both event trigger mode and periodical reporting mode. For intra-frequency and

inter-frequency measurements the list shall be in the order of the value of the measurement quantity (the first cell shall be the best cell). The "best" FDD cell has the largest value when the measurement quantity is "Ec/No" or "RSCP". On the other hand, the "best" cell has the smallest value when the measurement quantity is "Pathloss". The "best" TDD cell has the largest value when measurement quantity is "Primary CCPCH RSCP". For intra-frequency measurements, the ordering shall be applied to all cells included in the IE "Measured results". For inter-frequency measurements, the ordering shall be applied to all cells on the same frequency included in the IE "Measured results". For other measurements, the order of reported measurement objects is not specified.

### 10.3.7.45 Measured results on RACH

For measurements on used frequency, this IE contains the measured results on RACH of the quantity indicated by Reporting quantity in the IE "Intra-frequency reporting quantity for RACH Reporting" in system information broadcast on BCH. The list, measurement results for monitored cells (not including the current cell) shall be in the order of the value of the measurement quantity as indicated by Reporting Quantity in the IE "Intra-frequency reporting quantity for RACH Reporting" (the first cell shall be the best cell).

For measurements on non-used frequencies, this IE includes the best cell on each non-used frequency, in order of decreasing quality and up to a maximum number as specified by the IE "Maximum number of inter-frequency RACH reporting cells".

The "best" FDD cell has the largest value when the measurement quantity is "Ec/No" or "RSCP". On the other hand, the "best" cell has the smallest value when the measurement quantity is "Pathloss". The "best" TDD cell has the largest value when measurement quantity is "Primary CCPCH RSCP".

For measurements on E-UTRA frequencies, this IE includes a bit string, of which the i-th bit should be set to 1 only if the quantity of the i-th E-UTRA frequency configured for measurement and reporting on RACH in the IE "E-UTRA frequency list indicator" received in System Information Block Type 19 exceeds the threshold specified by

- 1> if the "E-UTRA frequency RACH reporting quantity" is set to RSRP

2> the threshold specified by the IE "E-UTRA frequency RACH reporting threshold".

1> if the "E-UTRA frequency RACH reporting quantity" is set to RSRQ

2> the threshold specified by the IE "E-UTRA frequency RACH reporting threshold" minus the offset "EUTRA-RSRQ-offsetWB", if stored in the variable PRIORITY\_INFO\_LIST for that frequency.

If the threshold is not exceeded, set the corresponding bit to 0.

NOTE: Monitored cells consist of neighbouring cells.

### 10.3.7.45a Measured results on RACH FDD

NOTE 1: Only for FDD.

For measurements on used frequency, this IE contains the measured results on RACH of the quantity indicated by Reporting quantity in the IE "Intra-frequency reporting quantity for RACH Reporting" in system information broadcast on BCH. The list, measurement results for monitored cells (not including the current cell) shall be in the order of the value of the measurement quantity as indicated by Reporting Quantity in the IE "Intra-frequency reporting quantity for RACH Reporting" (the first cell shall be the best cell).

For measurements on non-used frequencies, this IE includes the best cell on each non-used frequency, in order of decreasing quality and up to a maximum number as specified by the IE "Maximum number of inter-frequency RACH reporting cells".

The "best" FDD cell has the largest value when the measurement quantity is "Ec/No" or "RSCP". On the other hand, the "best" cell has the smallest value when the measurement quantity is "Pathloss".

For measurements on E-UTRA frequencies, this IE includes a bit string, of which the i-th bit should be set to 1 only if the quantity of the i-th E-UTRA frequency configured for measurement and reporting on RACH in the IE "E-UTRA frequency list indicator" received in System Information Block Type 19 exceeds the threshold specified by

- 1> if the "E-UTRA frequency RACH reporting quantity" is set to RSRP
  - 2> the threshold specified by the IE "E-UTRA frequency RACH reporting threshold".
- 1> if the "E-UTRA frequency RACH reporting quantity" is set to RSRQ
  - 2> the threshold specified by the IE "E-UTRA frequency RACH reporting threshold" minus the offset "EUTRA-RSRQ-offsetWB", if stored in the variable PRIORITY\_INFO\_LIST for that frequency.

If the threshold is not exceeded, set the corresponding bit to 0.

| Condition      | Explanation   |
|----------------|---|
| <i>MCM_opt</i> | This IE is OPTIONAL when sent in SYSTEM INFORMATION. Otherwise, the IE is not needed. |

### 10.3.7.48 Measurement Identity

A reference number that is used by the UTRAN at modification and release of the measurement, and by the UE in the measurement report.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|-------|--------------------|-----------------------|---------|
| Measurement identity           | MP   |       | Integer(1..16      |                       | REL-9   |
|                                |      |       | 17..32)            |                       |         |

NOTE: The specific handling of the Measurement Identity for UEs supporting the measurement identity extension is captured in ASN.1

### 10.3.7.49 Measurement reporting mode

Contains the type of Measurement Report transfer mode and the indication of periodical/event trigger.

| Information Element/Group name                      | Need | Multi | Type and reference  | Semantics description |
|---|------|-------|---|-----------------------|
| Measurement Report Transfer Mode                    | MP   |       | enumerated (Acknowledged mode RLC, Unacknowledged mode RLC) |                       |
| Periodical Reporting / Event Trigger Reporting Mode | MP   |       | Enumerated (Periodical reporting, Event trigger)            |                       |

### 10.3.7.50 Measurement Type

| Information Element/Group name | Need | Multi | Type and reference  | Semantics description |
|--------------------------------|------|-------|---|-----------------------|
| Measurement Type               | MP   |       | Enumerated (Intra-frequency, Inter-frequency, Inter-RAT, Traffic volume, Quality, UE internal, UE positioning, CSG proximity) |                       |

### 10.3.7.51 Measurement validity

| Information Element/Group name | Need | Multi | Type and reference  | Semantics description |
|--------------------------------|------|-------|---|-----------------------|
| UE state                       | MP   |       | Enumerated (CELL_DCH, all states except CELL_DCH, all states) |                       |

## 10.3.7.52 Void

## 10.3.7.53 Periodical reporting criteria

Contains the periodical reporting criteria information. It is necessary only in the periodical reporting mode.

| Information Element/Group name | Need | Multi | Type and reference   | Semantics description  | Version |
|--------------------------------|------|-------|--|--|---------|
| Amount of reporting            | MD   |       | Integer(1, 2, 4, 8, 16, 32, 64, Infinity)  | The default value is infinity.   |         |
| Reporting interval             | MP   |       | Integer(250, 500, 1000, 2000, 3000, 4000, 6000, 8000, 12000, 16000, 20000, 24000, 28000, 32000, 64000) | Indicates the interval of periodical report.<br>Interval in milliseconds.<br>If this IE is configured for SI acquisition, then it specifies the maximum time the UE can take for SI acquisition. |         |

## 10.3.7.53aa Periodical reporting info-1b

| Information Element/Group name | Need | Multi | Type and reference                                  | Semantics description  | Version |
|--------------------------------|------|-------|---|--|---------|
| Amount of reporting            | MP   |       | Integer(1, 2, 4, 8, 16, 32, 64, Infinity)           |  | REL-5   |
| Reporting interval             | MP   |       | Integer(0, 250, 500, 1000, 2000, 4000, 8000, 16000) | Indicates the interval of periodical reporting when such reporting is triggered by an event. Interval in milliseconds.<br>0 means no periodical reporting. | REL-5   |

## 10.3.7.53a PLMN identities of neighbour cells

This IE contains the PLMN identities of neighbour cells.

| Information Element/Group name      | Need | Multi              | Type and reference      | Semantics description   | Version |
|-------------------------------------|------|--------------------|-------------------------|---|---------|
| PLMNs of intra-frequency cells list | OP   | 1 to <maxCeIIMeas> |                         | NOTE  |         |
| >PLMN identity                      | OP   |                    | PLMN identity 10.3.1.11 | Action when not present is specified in subclause 8.1.1.6.18. |         |
| PLMNs of inter-frequency cells list | OP   | 1 to <maxCeIIMeas> |                         | NOTE  |         |
| >PLMN identity                      | OP   |                    | PLMN identity 10.3.1.11 | Action when not present is specified in subclause 8.1.1.6.18. |         |
| PLMNs of inter-RAT cells list       | OP   | 1 to <maxCeIIMeas> |                         |   |         |

| Information Element/Group name               | Need | Multi               | Type and reference                             | Semantics description   | Version |
|--|------|---------------------|--|---|---------|
| >PLMN identity                               | OP   |                     | PLMN identity<br>10.3.1.11                     | Action when not present is specified in subclause 8.1.1.6.18. |         |
| Multiple PLMNs of intra-frequency cells list | OP   | 1 to <maxCellsMeas> |  |   | REL-8   |
| >Multiple PLMN list                          | OP   | 1 to 6              |  | Action when not present is specified in subclause 8.1.1.6.18. | REL-8   |
| >> PLMN identity with Optional MCC           | MP   |                     | PLMN identity with Optional MCC<br>10.3.1.11 a |   | REL-8   |
| Multiple PLMNs of inter-frequency cells list | OP   | 1 to <maxCellsMeas> |  |   | REL-8   |
| >Multiple PLMN list                          | OP   | 1 to 6              |  | Action when not present is specified in subclause 8.1.1.6.18. | REL-8   |
| >> PLMN identity with Optional MCC           | MP   |                     | PLMN identity with Optional MCC<br>10.3.1.11 a |   | REL-8   |

NOTE: The IE "PLMNs of intra-frequency cells list" and/or the IE "PLMNs of inter-frequency cells list" can be used when each entry in those lists is either empty or includes a single PLMN identity. If multiple PLMNs need to be indicated in a non-empty entry, the network uses the IE "Multiple PLMNs of intra-frequency cells list" and/or the IE "Multiple PLMNs of inter-frequency cells list" instead.

### 10.3.7.54 Primary CCPCH RSCP info

NOTE: Only for TDD

| Information Element/Group name      | Need    | Multi | IE type and reference | Semantics description   | Version |
|-------------------------------------|---------|-------|-----------------------|---|---------|
| Primary CCPCH RSCP                  | MP      |       | Integer(0..91)        | According to P-CCPCH_RSCP_LEV in [19] and [20]. Thirty-six spare values are needed.                           |         |
| Delta <sub>Primary</sub> CCPCH RSCP | CV-Rel5 |       | Integer(-5..-1)       | If present, the actual value of Primary CCPCH RSCP = Primary CCPCH RSCP + Delta <sub>Primary</sub> CCPCH RSCP | REL-5   |

| Condition | Explanation   |
|-----------|---|
| Rel5      | This IE is mandatory if the value of Primary CCPCH RSCP is below 0. Otherwise the IE is not needed. |

## 10.3.7.54a Qhcs

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description   | Version |
|--------------------------------|------|-------|--------------------|---|---------|
| Qhcs                           | MP   |       | Integer(0..99)     | Qhcs, mapped from CPICH Ec/No (FDD), see [4] [dB]<br>0: -24<br>1: -23.5<br>2: -23<br>3: -22.5<br>...<br>45: -1.5<br>46: -1<br>47: -0.5<br>48: 0<br>49: (spare)<br>...<br>98: (spare)<br>99: (spare) |         |
|                                |      |       |                    | Qhcs, mapped from CPICH RSCP (FDD), see [4] [dBm]<br>0: -115<br>1: -114<br>2: -113<br>:<br>88: -27<br>89: -26<br>90: -(spare)<br>91: -(spare)<br>:<br>98: -(spare)<br>99: -(spare)                  |         |
|                                |      |       |                    | Qhcs, mapped from PCCPCH RSCP (TDD), see [4] [dBm]<br>0: -115<br>1: -114<br>2: -113<br>:<br>88: -27<br>89: -26<br>90: -(spare)<br>91: -(spare)<br>:<br>98: -(spare)<br>99: -(spare)                 |         |

| Information Element/Group name | Need    | Multi | Type and Reference | Semantics description  | Version |
|--------------------------------|---------|-------|--------------------|--|---------|
|                                |         |       |                    | Qhcs level, mapped from Averaged received signal level RSSI (GSM), see [4] [dBm]<br>0: -110<br>1: -109<br>2: -108<br>:<br>61: -49<br>62: -48<br>63: -47<br>64: -46<br>65: -45<br>66: -44<br>67: -43<br>68: -42<br>69: -41<br>70: -40<br>71: -39<br>72: -38<br>73: -37<br>74: -(spare)<br>:<br>98: -(spare)<br>99: -(spare) |         |
| Delta <sub>Qhcs-RSCP</sub>     | CV-RSCP |       | Integer(-5..-1)    | If present, the actual value of Qhcs = Qhcs + Delta <sub>Qhcs-RSCP</sub>   | REL-5   |

| Condition | Explanation  |
|-----------|--|
| RSCP      | This IE is optional if Qhcs is mapped from CPICH RSCP or PCCPCH RSCP, and if the value of the RSCP is below 0 (-115dBm). It is not needed otherwise. |

### 10.3.7.55 Quality measured results list

| Information Element/Group name | Need | Multi            | Type and reference                      | Semantics description                             |
|--------------------------------|------|------------------|---|---|

|----------------|---|
| BLER reporting | This IE is not needed if the IE "DL Transport Channel BLER" is FALSE and optional if the IE "DL Transport Channel BLER" is TRUE |

## 10.3.7.60 Reference time difference to cell

In the SystemInformation message, the reference time difference to cell indicates the timing difference between the primary CCPCH of the current cell and the primary CCPCH of a neighbouring cell.

In the Measurement Control message, the reference time difference to cell indicates the timing difference between UE uplink transmission timing and the primary CCPCH of a neighbouring cell.

| Information Element/Group name | Need | Multi | Type and reference                | Semantics description |
|--------------------------------|------|-------|-----------------------------------|-----------------------|

| >>Reference time difference    | MP   |       | Integer(0..38400 by step of 2560) | In chips              |

## 10.3.7.61 Reporting Cell Status

Indicates maximum allowed number of cells to report and whether active set cells and/or virtual active set cells and/or monitored set cells and/or detected set cells on used frequency and/or monitored set cells and/or detected set cells on non used frequency should/should not be included in the IE "Measured results".

| Information Element/Group name  | Need | Multi | Type and reference | Semantics description  | Version |
|---------------------------------|------|-------|--------------------|--|---------|
| CHOICE reported cell            | MP   |       |                    |  |         |
| >Report cells within active set |      |       |                    | This choice is not valid for inter-RAT measurements. For inter-frequency |         |

| Information Element/Group name  | Need | Multi | Type and reference   | Semantics description   | Version |
|---|------|-------|--|---|---------|
|   |      |       |  | measurements it is only valid for reporting events 2D and 2F. See NOTE 1. |         |
| >>Maximum number of reported cells  | MP   |       | Integer(1..6)  |   |         |

| >Traffic volume measurement reporting criteria |      |       | Traffic volume measurement reporting criteria<br>10.3.7.72 |   |
| >Periodical reporting criteria                 |      |       | Periodical reporting criteria<br>10.3.7.53                 |   |
| >No reporting                                  |      |       |  | (no data)<br>Chosen when this measurement only is used as additional measurement to another measurement |

### 10.3.7.69 Traffic volume measurement event results

Contains the event result for a traffic volume measurement.

| Information Element/Group name                  | Need           | Multi | Type and reference                      | Semantics description   |
|---|----------------|-------|---|---|
| Uplink transport channel type causing the event | MP             |       | Enumerated(DCH,RACH, USCH)              | USCH is TDD only.<br>RACH is the currently configured default in the uplink.<br>For 1.28 Mcps TDD, if E-DCH is configured to the UE, and the Uplink transport channel type is USCH and UL Transport Channel identity is 32, it means E-DCH TVM is configured. |
| UL Transport Channel identity                   | CV-UL-DCH/USCH |       | Transport channel identity 10.3.5.18    |   |
| Traffic volume event identity                   | MP             |       | Traffic volume event identity 10.3.7.66 |   |

| Condition          | Explanation  |
|--------------------|--|
| <i>UL-DCH/USCH</i> | If IE "Uplink transport channel type" is equal to "DCH" or "USCH" (TDD only) this IE is mandatory present. Otherwise the IE is not needed. |

### 10.3.7.70 Traffic volume measurement object

Contains the measurement object information for a traffic volume measurement.

| Information Element/Group name     | Need           | Multi           | Type and reference                   | Semantics description   |
|------------------------------------|----------------|-----------------|--------------------------------------|---|
| Traffic volume measurement objects | MP             | 1 to <maxTrCH > |                                      |   |
| >Uplink transport channel type     | MP             |                 | Enumerated(DCH,RACH, USCH)           | USCH is TDD only.<br>RACH is the currently configured default in the uplink.<br>For 1.28 Mcps TDD, if E-DCH is configured to the UE, and the Uplink transport channel type is USCH and UL Transport Channel identity is 32, it means E-DCH TVM is configured. |
| >UL Target Transport Channel ID    | CV-UL-DCH/USCH |                 | Transport channel identity 10.3.5.18 |   |

| Condition          | Explanation  |
|--------------------|--|
| <i>UL-DCH/USCH</i> | If IE "Uplink transport channel type" is equal to "DCH" or "USCH" (TDD only) this IE is mandatory present. Otherwise the IE is not needed. |

### 10.3.7.71 Traffic volume measurement quantity

Contains the measurement quantity information for a traffic volume measurement.

| Information Element/Group name                 | Need  | Multi | Type and reference  | Semantics description             |
|--|-------|-------|---|-----------------------------------|
| Measurement quantity                           | MP    |       | Enumerated( RLC buffer payload, Average RLC buffer payload, Variance of RLC buffer payload) | This parameter should be ignored. |
| Time Interval to take an average or a variance | CV-AV |       | Integer(20, 40, ..260, by steps of 20)  | In ms                             |

| Condition | Explanation  |
|-----------|--|
| A/V       | This IE is mandatory present when "Average RLC buffer" or "Variance of RLC buffer payload" is chosen and not needed otherwise. |

### 10.3.7.72 Traffic volume measurement reporting criteria

Contains the measurement reporting criteria information for a traffic volume measurement.

Event 4a: Transport Channel Traffic Volume [15] exceeds an absolute threshold.

Event 4b: Transport Channel Traffic Volume [15] becomes smaller than an absolute threshold.

| Information Element/Group name             | Need           | Multi                   | Type and reference   | Semantics description   |
|--|----------------|-------------------------|--|---|
| Parameters sent for each transport channel | OP             | 1 to <maxTrCH >         |  | This IE is always required, need is OP to align with ASN.1  |
| >Uplink transport channel type             | OP             |                         | Enumerated(DCH,RACH, USCH)   | USCH is TDD only. RACH is the currently configured default in the uplink. For 1.28 Mcps TDD, if E-DCH is configured to the UE, and the Uplink transport channel type is USCH and UL Transport Channel identity is 32, it means E-DCH TVM is configured. |
| >UL Transport Channel ID                   | CV-UL-DCH/USCH |                         | Transport channel identity 10.3.5.18   |   |
| >Parameters required for each Event        | OP             | 1 to <maxMeas parEvent> |  |   |
| >>Traffic volume event identity            | MP             |                         | Traffic volume event identity 10.3.7.66  |   |
| >>Reporting Threshold                      | MP             |                         | Enumerated(8,16,32,64,128,256,512,1024,2K,3K,4K,6K,8K,12K,16K,24K,32K,48K,64K,96K,128K,192K,256K,384K,512K,768K) | Threshold in bytes<br>And N Kbytes = N*1024 bytes   |
| >>Time to trigger                          | OP             |                         | Time to trigger 10.3.7.64  | Indicates the period of time during which the event condition has to be satisfied, before sending a Measurement Report. Time in ms  |
| >>Pending time after trigger               | OP             |                         | Integer(250, 500, 1000, 2000, 4000, 8000, 16000)   | Indicates the period of time during which it is forbidden to send any new measurement reports with the same Traffic volume event identity even if the triggering condition is fulfilled. Time in milliseconds   |
| >>Tx interruption after trigger            | OP             |                         | Integer (250, 500, 1000, 2000, 4000, 8000, 16000)  | Time in milliseconds. Indicates how long the UE shall block DTCH transmissions on the RACH after a measurement report is triggered.   |

| Condition          | Explanation   |
|--------------------|---|
| <i>UL-DCH/USCH</i> | If IE "Uplink transport channel type" is equal to "DCH" or "USCH" (TDD only) this IE is optional. Otherwise the IE is not needed. |

### 10.3.7.73 Traffic volume measurement system information

| Condition       | Explanation   |
|-----------------|---|
| <i>Clause 1</i> | This IE is mandatory present if the IE "UE internal event identity" is set to "6f" or "6g", otherwise the IE is not needed. |

## 10.3.7.79 UE internal measurement quantity

The quantity the UE shall measure in case of UE internal measurement.

| Information Element/Group name | Need | Multi | Type and reference  | Semantics description   | Version |
|--------------------------------|------|-------|---|---|---------|
| CHOICE <i>mode</i>             | MP   |       |   |   |         |
| >FDD                           |      |       |   |   |         |
| >>Measurement quantity         | MP   |       | Enumerated(UE Transmitted Power, UTRA Carrier RSSI, UE Rx-Tx time difference) |   |         |
| >TDD                           |      |       |   |   |         |
| >>Measurement quantity         | MP   |       | Enumerated(UE Transmitted Power, UTRA Carrier RSSI, $T_{ADV}$ )               | Measurement on Timing Advance is for 1.28 Mcps TDD  | REL-4   |
| Filter coefficient             | OP   |       | Filter coefficient 10.3.7.9   | If the IE "Measurement quantity" is set to "Rx-Tx time difference" and this IE is present, the UE behaviour is unspecified. |         |

### 10.3.7.80 UE internal measurement reporting criteria

The triggering of the event-triggered reporting for a UE internal measurement. All events concerning UE internal measurements are labelled 6x where x is a, b, c... In TDD, the events 6a - 6d are measured and reported on timeslot basis.

Event 6a: The UE Transmitted Power becomes larger than an absolute threshold

Event 6b: The UE Transmitted Power becomes less than an absolute threshold

Event 6c: The UE Transmitted Power reaches its minimum value

Event 6d: The UE Transmitted Power reaches its maximum value

Event 6e: The UE RSSI reaches the UEs dynamic receiver range

Event 6f (FDD): The UE Rx-Tx time difference for a RL included in the active set becomes larger than an absolute threshold

Event 6f (1.28 Mcps TDD): The time difference indicated by  $T_{ADV}$  becomes larger than an absolute threshold

Event 6g: The UE Rx-Tx time difference for a RL included in the active set becomes less than an absolute threshold

| Information Element/Group name                         | Need | Multi               | Type and reference                   | Semantics description | Version |
|--|------|---------------------|--------------------------------------|-----------------------|---------|
| Parameters sent for each UE internal measurement event | OP   | 1 to <maxMeasEvent> |                                      |                       |         |

### 10.3.7.83 UE Rx-Tx time difference type 1

The difference in time between the UE uplink DPCCH/DPDCH frame transmission and the first detected path (in time), of the downlink DPCH or F-DPCH frame from the measured radio link, as defined in [7]. This measurement is for FDD only.

| Information Element/Group name  | Need | Multi | Type and reference | Semantics description                     |
|---------------------------------|------|-------|--------------------|---|
| UE Rx-Tx time difference type 1 | MP   |       | Integer(768..1280) | In chips.<br>511 spare values are needed. |

### 10.3.7.84 UE Rx-Tx time difference type 2

The difference in time between the UE uplink DPCCH/DPDCH frame transmission and the first detected path (in time), of the downlink DPCH or F-DPCH frame from the measured radio link, as defined in [7].

| Information Element/Group name  | Need | Multi | Type and reference | Semantics description |
|---------------------------------|------|-------|--------------------|-----------------------|
| UE Rx-Tx time difference type 2 | MP   |       | Integer (0..8191)  | According to [19].    |

### 10.3.7.85 UE Transmitted Power info

| Information Element/Group name | Need | Multi | IE type and reference | Semantics description                     |
|--------------------------------|------|-------|-----------------------|---|
| UE Transmitted Power           | MP   |       | Integer (0..104)      | According to UE_TX_POWER in [19] and [20] |

### 10.3.7.86 UE positioning Ciphering info

This IE contains information for the ciphering of UE positioning assistance data broadcast in System Information.

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description                                 |
|--------------------------------|------|-------|--------------------|---|
| Ciphering Key Flag             | MP   |       | Bit string(1)      |   |
| Ciphering Serial Number        | MP   |       | Integer(0..65535)  | The serial number used in the DES ciphering algorithm |

## 10.3.7.87 UE positioning Error

| Information Element/Group name           | Need                        | Multi | Type and Reference   | Semantics description | Version |
|--|-----------------------------|-------|--|-----------------------|---------|
| Error reason                             | MP                          |       | Enumerated( Not Enough OTDOA Cells, Not Enough GPS Satellites, Assistance Data Missing, Not Accomplished GPS Timing Of Cell Frames, Undefined Error, Request Denied By User, Not Processed And Timeout, Reference Cell Not Serving Cell, | Note 1                |         |
|  |                             |       | Not Enough GANSS Satellites, Not Accomplished GANSS Timing Of Cell Frames)   | Note 1                | REL-7   |
| GPS Additional Assistance Data Request   | CV- <i>GPSdataMissing</i>   |       | UE positioning GPS Additional Assistance Data Request 10.3.7.88a   |                       |         |
| GANSS Additional Assistance Data Request | CV- <i>GANSSdataMissing</i> |       | UE positioning GANSS Additional Assistance Data Request 10.3.7.88c   |                       | REL-7   |

NOTE 1: The following table describes each value of the IE "Error reason".

| Value  | Indication   |
|--|--|
| Not Enough OTDOA Cells                       | There were not enough cells to be received.                                |
| Not Enough GPS Satellites                    | There were not enough GPS satellites to be received.                       |
| Assistance Data Missing                      | UE positioning GANSS or/and GPS assistance data missing.                   |
| Not Accomplished GPS Timing Of Cell Frames   | UE was not able to accomplish the GPS timing of cell frames measurement.   |
| Undefined Error                              | Undefined error.   |
| Request Denied By User                       | UE positioning request denied by upper layers.                             |
| Not Processed And Timeout                    | UE positioning request not processed by upper layers and timeout.          |
| Reference Cell Not Serving Cell              | UE was not able to read the SFN of the reference cell.                     |
| Not Enough GANSS Satellites                  | There were not enough GANSS satellites to be received.                     |
| Not Accomplished GANSS Timing Of Cell Frames | UE was not able to accomplish the GANSS timing of cell frames measurement. |

| Condition               | Explanation  |
|-------------------------|--|
| <i>GPSdataMissing</i>   | The IE is optional if the IE "Error reason" is "Assistance Data Missing" and not needed otherwise. |
| <i>GANSSdataMissing</i> | The IE is optional if the IE "Error reason" is "Assistance Data Missing" and not needed otherwise. |

### 10.3.7.88 UE positioning GPS acquisition assistance

This IE contains parameters that enable fast acquisition of the GPS signals in UE-assisted GPS positioning.

| Information Element/Group name               | Need | Multi         | Type and Reference  | Semantics description   | Version |
|--|------|---------------|---|---|---------|
| GPS TOW msec                                 | MP   |               | Integer(0..6.048*10 <sup>9</sup> -1)                        | GPS Time of Week in milliseconds rounded down to the nearest millisecond unit. It is also the time when satellite information is valid. |         |
| UTRAN GPS reference time                     | OP   |               |   |   |         |

### 10.3.7.88b UE positioning GANSS reference measurement information

This IE provides reference code and Doppler measurement information of visible satellites of a GNSS constellation. The information enables fast acquisition of the GANSS signals in UE-assisted GANSS positioning. If the IE "UE positioning GPS acquisition assistance" is not included in IE "UE positioning measurement", the Satellite Information is valid at the time as given in the IE "UE positioning GANSS reference time" IE. I.e., if IE "UE positioning GANSS reference measurement information" is included in IE "UE positioning GANSS assistance data" and IE "UE positioning GPS acquisition assistance" is not included in IE "UE positioning measurement", the IE "UE positioning GANSS reference time" shall also be included. If the IE "UE positioning GPS acquisition assistance" is included in IE "UE positioning measurement", the IE "GPS TOW msec" and IE "UTRAN GPS reference time" included in IE "UE positioning GPS acquisition assistance" is also valid for the Satellite information in IE "UE positioning GANSS reference measurement information".

| Condition                    | Explanation   |
|------------------------------|---|
| <i>GANSS-ID-SBAS</i>         | This IE is mandatory present if the IE "GANSS ID" is "SBAS" and not needed otherwise.   |
| <i>GANSSNavigation Model</i> | The IE is mandatory present if the IE "GANSS Navigation Model" is set to TRUE or if the IE "GANSS Additional Navigation Models" is included and not needed otherwise. |
| <i>AssistanceChoices</i>     | This IE is mandatory present if non-native or non-default assistance data choices are requested and not needed otherwise.   |

### 10.3.7.88d DGANSS Signal Id

The DGANSS signal Id refers to the signal for which differential corrections or data bit assistance are required. It depends on the GANSS ID. Each bit refers to a particular signal. When the bit is set to 1, this means that the differential corrections or data bit assistance are requested for this particular signal. Differential corrections or data bit assistance can be requested for several signals using the bit string.

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description | Version |

NOTE: This IE shall contain exactly one of the optional fields indicated by "NOTE".

### 10.3.7.92 UE positioning GPS ionospheric model

The IE contains fields needed to model the propagation delays of the GPS signals through the ionosphere.

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description |
|--------------------------------|------|-------|--------------------|-----------------------|
| $\alpha_0$                     | MP   |       | Bit string(8)      | Note 1                |
| $\alpha_1$                     | MP   |       | Bit string(8)      | Note 1                |
| $\alpha_2$                     | MP   |       | Bit string(8)      | Note 1                |
| $\alpha_3$                     | MP   |       | Bit string(8)      | Note 1                |
| $\beta_0$                      | MP   |       | Bit string(8)      | Note 2                |
| $\beta_1$                      | MP   |       | Bit string(8)      | Note 2                |
| $\beta_2$                      | MP   |       | Bit string(8)      | Note 2                |
| $\beta_3$                      | MP   |       | Bit string(8)      | Note 2                |

NOTE 1: The parameters  $\alpha_n$  are the coefficients of a cubic equation representing the amplitude of the vertical delay [12].

NOTE 2: The parameters  $\beta_n$  are the coefficients of a cubic equation representing the period of the ionospheric model [12].

### 10.3.7.92a UE positioning GANSS ionospheric model

The IE contains fields needed to model the propagation delays of the GANSS signals through the ionosphere.

### 10.3.7.94 UE positioning GPS navigation model

This IE contain information required to manage the transfer of precise navigation data to the GPS-capable UE.

| Information Element/Group name                 | Need                           | Multi         | Type and Reference  | Semantics description  |
|--|--------------------------------|---------------|---|--|
| Satellite information                          | MP                             | 1 to <maxSat> |   |  |
| >SatID   | MP                             |               | Enumerated(0..63)   | Identifies the satellite and is equal to (SV ID No - 1) where SV ID No is defined in [12]. |
| >Satellite Status                              | MP                             |               | Enumerated(NS_NN, ES_SN, ES_NN, REVD)                                   | NOTE   |
| >GPS Ephemeris and Clock Correction parameters | CV-<br><i>Satellite status</i> |               | UE positioning GPS Ephemeris and Clock Correction parameters 10.3.7.91a |  |

NOTE: The UE shall interpret enumerated symbols as follows.

| Value | Indication                                |
|-------|---|
| NS_NN | New satellite, new Navigation Model       |
| ES_SN | Existing satellite, same Navigation Model |
| ES_NN | Existing satellite, new Navigation Model  |
| REVD  | Reserved                                  |

| Condition        | Explanation   |
|------------------|---|
| Satellite status | The IE is not needed if the IE "Satellite status" is ES_SN and mandatory present otherwise. |

### 10.3.7.94a UE positioning GANSS navigation model

This IE contains information required to manage the transfer of precise navigation data to the GANSS-capable UE.

| Information Element/Group name | Need | Multi              | Type and Reference                          | Semantics description   | Version |
|--------------------------------|------|--------------------|---|---|---------|
| Non-Broadcast Indication       | OP   |                    | Enumerated (TRUE)                           | If this IE is present, GANSS navigation model is not derived from satellite broadcast | REL-7   |
| Satellite information          | MP   | 1 to <maxGANSSSat> |   |   | REL-7   |
| >SatID                         | MP   |                    | Integer (0..63)                             | Identifies the satellite and is as defined in Note 2 of 10.3.7.88b.                   | REL-7   |
| >SVHealth                      | MP   |                    | Bit string(5)                               | NOTE  | REL-7   |
| >IOD                           | MP   |                    | Bit string(10)                              |   | REL-7   |
| >GANSS Clock Model             | MP   |                    | UE positioning GANSS clock model 10.3.7.91d |   | REL-7   |
| > GANSS Orbit Model            | MP   |                    | UE positioning GANSS orbit model 10.3.7.91c |   | REL-7   |

NOTE: The Health values are GNSS specific. For Galileo, the UE shall interpret bit string as follows:

| Parameter                 | Bit | Type       | Explanation        |
|---------------------------|-----|------------|--------------------|
| E5a Data Validity Status  | 0   | Boolean    |                    |
| E5b Data Validity Status  | 1   | Boolean    |                    |
| E1-B Data Validity Status | 2   | Boolean    |                    |
| E5a Signal Health Status  | 3-4 | Bit string | See [61], Table 67 |

### 10.3.7.94b UE positioning GANSS additional navigation models

This IE contains information required to manage the transfer of precise navigation data to the GANSS-capable UE.

| Information Element/Group name | Need | Multi               | Type and Reference                                      | Semantics description   | Version |
|--------------------------------|------|---------------------|---|---|---------|
| Non-Broadcast Indication       | OP   |                     | Enumerated (TRUE)                                       | If this IE is present, GANSS navigation model is not derived from satellite broadcast | REL-8   |
| Satellite information          | MP   | 1 to <maxGAN SSSat> |   |   | REL-8   |
| >SatID                         | MP   |                     | Integer (0..63)   | Identifies the satellite and is as defined in Note 2 of 10.3.7.88b.                   | REL-8   |
| >SV Health                     | MP   |                     | Bit string(6)   | NOTE 1  | REL-8   |
| >IOD                           | MP   |                     | Bit string(11)  | NOTE 2  | REL-8   |
| >GANSS additional clock models | MP   |                     | UE positioning GANSS additional clock models 10.3.7.91f |   | REL-8   |
| >GANSS additional orbit models | MP   |                     | UE positioning GANSS additional orbit models 10.3.7.91e |   | REL-8   |

NOTE 1: The SV Health values are GNSS specific as identified by the GANSS ID :

| GANSS               | SV Health Bit String(6)            |                                  |                               |                   |                |                |
|---------------------|------------------------------------|----------------------------------|-------------------------------|-------------------|----------------|----------------|
|                     | Bit 1 (MSB)                        | Bit 2                            | Bit 3                         | Bit 4             | Bit 5          | Bit 6 (LSB)    |
| Modernized GPS      | L1C Health [70]                    | L1 Health [68,69]                | L2 Health [68,69]             | L5 Health [68,69] | '0' (reserved) | '0' (reserved) |
| SBAS                | Ranging On (0), Off(1) [71]        | Corrections On (0), Off (1) [71] | Integrity On (0), Off(1) [71] | '0' (reserved)    | '0' (reserved) | '0' (reserved) |
| QZSS QZS-L1         | SV Health [72]                     |                                  |                               |                   |                |                |
| QZSS QZS-L1C/L2C/L5 | L1C Health [72]                    | L1 Health [72]                   | L2 Health [72]                | L5 Health [72]    | '0' (reserved) | '0' (reserved) |
| GLONASS             | B <sub>n</sub> (MSB) [73, page 23] | F <sub>T</sub> [73, Table 4.4]   |                               |                   |                | '0' (reserved) |

NOTE 2: The IOD values are GNSS specific as identified by the GANSS ID :

| GANSS               | IOD Bit String(11)   |                           |       |                                      |  |       |       |       |       |        |              |
|---------------------|--|---------------------------|-------|--------------------------------------|--|-------|-------|-------|-------|--------|--------------|
|                     | Bit 1 (MSB)  | Bit 2                     | Bit 3 | Bit 4                                | Bit 5  | Bit 6 | Bit 7 | Bit 8 | Bit 9 | Bit 10 | Bit 11 (LSB) |
| Modernized GPS      | t <sub>oe</sub> (seconds, scale factor 300, range 0 – 604500) [68, 69, 70] |                           |       |                                      |  |       |       |       |       |        |              |

| >SFN                                | MP   |       | Integer(0..4095)  | The SFN which the UTRAN GANSS timing of cell frames time stamps.   | REL-7   |
| T <sub>UTRAN-GANSS</sub> drift rate | OP   |       | ENUMERATED (0, 1, 2, 5, 10, 15, 25, 50, -1, -2, -5, -10, -15, -25, -50) | in 1/256 chips per sec. One spare value needed.  | REL-7   |

NOTE: Definition of GNSS system time origin:

| GNSS                | GNSS System Time Origin              |
|---------------------|--------------------------------------|
| Galileo System Time | August 22, 1999; 00:00:00 UTC (BIPM) |
| GPS System Time     | January 6, 1980; 00:00:00 UTC (USNO) |
| QZSS System Time    | January 6, 1980; 00:00:00 UTC (USNO) |
| GLONASS System Time | January 1, 1996; 03:00:00 UTC (RU)   |

## 10.3.7.96a UE positioning GPS reference time uncertainty

| Information Element/Group name                | Need | Multi | Type and reference | Semantics description  | Version |
|---|------|-------|--------------------|--|---------|
| UE Positioning GPS Reference Time Uncertainty | MP   |       | Integer (0..127)   | This element provides the accuracy of the provided GPS time, or alternatively the accuracy of the provided relation between GPS and UTRAN time. If "GPS TOW" is the provided GPS time, or alternatively the GPS time corresponding to the UTRAN time provided, then the true GPS time lies in the interval ["GPS TOW" - "GPS Reference Time Uncertainty", "GPS TOW" + "GPS Reference Time Uncertainty"]. The uncertainty $r$ , expressed in microseconds, is mapped to a number $K$ with the following formula:<br>$r = C * ((1+x)^K) - 1$ with $C = 0.0022$ and $x = 0.18$ .<br>To encode any higher value of the uncertainty than that corresponding to $K=127$ in the formula above, or to indicate an undefined value of the "GPS TOW", the same value, $K=127$ , shall be used. | REL-7   |

NOTE: This IE is not needed in the SRNS RELOCATION INFO message.

## 10.3.7.97 UE positioning GPS UTC model

The UTC Model field contains a set of parameters needed to relate GPS time to Universal Time Coordinate (UTC).

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description |
|--------------------------------|------|-------|--------------------|-----------------------|
| $A_t$                          | MP   |       | Bit string(24)     | sec/sec [12]          |
| $A_0$                          | MP   |       | Bit string(32)     | seconds [12]          |
| $t_{ot}$                       | MP   |       | Bit string(8)      | seconds [12]          |
| $WN_t$                         | MP   |       | Bit string(8)      | weeks [12]            |
| $\Delta t_{LS}$                | MP   |       | Bit string(8)      | seconds [12]          |
| $WN_{LSF}$                     | MP   |       | Bit string(8)      | weeks [12]            |
| DN                             | MP   |       | Bit string(8)      | days [12]             |

|  |  |  |  | encoded modulation symbols as defined in [72] section 5.6. In case of GLONASS, it contains the 100 sps differentially Manchester encoded modulation symbols as defined in [73] section 3.3.2.2. |  |
|--|--|--|--|---|--|

### 10.3.7.97c UE positioning GANSS UTC model

The UTC Model field contains a set of parameters needed to relate GANSS time to Universal Time Coordinate (UTC).

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description |
|--------------------------------|------|-------|--------------------|-----------------------|
| $A_1$                          | MP   |       | Bit string(24)     |                       |
| $A_0$                          | MP   |       | Bit string(32)     |                       |
| $t_{ot}$                       | MP   |       | Bit string(8)      |                       |
| $\Delta t_{LS}$                | MP   |       | Bit string(8)      |                       |
| $WN_t$                         | MP   |       | Bit string(8)      |                       |
| $WN_{LSF}$                     | MP   |       | Bit string(8)      |                       |
| DN                             | MP   |       | Bit string(8)      |                       |
| $\Delta t_{LSF}$               | MP   |       | Bit string(8)      |                       |

For a GANSS Id referring to Galileo, the definition and the unit of the elements are provided in [61].

### 10.3.7.97d UE positioning GANSS additional UTC models

This element contains several sets of parameters needed to relate GNSS system time to Universal Time Coordinate (UTC), as defined in [68, 69, 70, 71, 72, 73]. Only one parameter set can be included in one UE positioning GANSS additional UTC models and which set of parameters to include depends on the GANSS-ID and UE capabilities.

The UTC time standard, UTC(k), is GNSS specific. E.g., if GANSS ID indicates QZSS, UE positioning GANSS additional UTC models contains a set of parameters needed to relate QZST to UTC(NICT). If GANSS ID indicates Modernized GPS, UE positioning GANSS additional UTC models contains a set of parameters needed to relate GPS system time to UTC(USNO). If GANSS ID indicates GLONASS, UE positioning GANSS additional UTC models contains a set of parameters needed to relate GLONASS system time to UTC(RU). If GANSS ID indicates SBAS, UE positioning GANSS additional UTC models contains a set of parameters needed to relate SBAS network time for the SBAS indicated by SBAS ID to the UTC standard defined by the UTC Standard ID.

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description   | Version |

NOTE: Total Round Trip Time = IE "Round Trip Time" + IE "Round Trip Time Extension".

| Condition | Explanation  |
|-----------|--|
| FDD       | The IE is optionally present in FDD, otherwise it is not needed. |

### 10.3.7.107 UE positioning OTDOA quality

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description  |
|--------------------------------|------|-------|--------------------|--|
| Std Resolution                 | MP   |       | Bit string(2)      | Std Resolution field includes the resolution used in Std of OTDOA Measurements field. Encoding on two bits as follows:<br>'00' 10 meters<br>'01' 20 meters<br>'10' 30 meters<br>'11' Reserved  |
| Number of OTDOA Measurements   | MP   |       | Bit string(3)      | The 'Number of OTDOA measurements' field indicates how many OTDOA measurements have been used in the UE to determine the sample standard deviation of the measurements. Following 3 bit encoding is used:<br>'001' 5-9<br>'010' 10-14<br>'011' 15-24 |

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description  |
|--------------------------------|------|-------|--------------------|--|
|                                |      |       |                    | '100' 25-34<br>'101' 35-44<br>'110' 45-54<br>'111' 55 or more<br>Special case:<br>'000': In this case the field 'Std of OTDOA measurements' contains the std of the reported SFN-SFN otd value = $\sqrt{E[(x-\mu)^2]}$ , where x is the reported value and $\mu = E[x]$ is the expectation value (i.e. the true value) of x. This std can be used irrespective of the number of measurements and reporting of the number of measurements is not needed. Also other measurements such as Ec/No or Rx levels can be utilised in this case to evaluate the 'Std of OTDOA measurements' reported in this IE.   |
| Std of OTDOA Measurements      | MP   |       | Bit string(5)      | Std of OTDOA Measurements field includes sample standard deviation of OTDOA measurements (when number of measurements is reported in 'Number of OTDOA measurements field') or standard deviation of the reported SFN-SFN otd value = $\sqrt{E[(x-\mu)^2]}$ , where x is the reported value and $\mu = E[x]$ is the expectation value (i.e. the true value) of x (when '000' is given in 'Number of OTDOA measurements' field). Following linear 5 bit encoding is used:<br>'00000' 0 - (R*1-1) meters<br>'00001' R*1 - (R*2-1) meters<br>'00010' R*2 - (R*3-1) meters<br>...<br>'11111' R*31 meters or more where R is the resolution defined by Std Resolution field. E.g. R=20 m corresponds to 0-19 m, 20-39 m,...,620+m. |

10.3.7.108 UE positioning OTDOA reference cell info

This IE defines the cell used for time references in all OTDOA measurements.

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description |

## 10.3.7.109a UE positioning Relative Time Difference quality

| Information Element/Group name          | Need | Multi | Type and Reference | Semantics description   |
|---|------|-------|--------------------|---|
| Relative Time Difference Std Resolution | MP   |       | Bit string(2)      | Std Resolution field includes the resolution used in Std of Relative Time Difference field. Encoding on two bits as follows:<br>'00' 10 meters<br>'01' 20 meters<br>'10' 30 meters<br>'11' Reserved   |
| Std of Relative Time Difference         | MP   |       | Bit string(5)      | Std of Relative Time difference field includes standard deviation of (SFN-SFN relative time difference + Fine SFN-SFN). Following linear 5 bit encoding is used:<br>'00000' 0 - (R*1-1) meters<br>'00001' R*1 - (R*2-1) meters<br>'00010' R*2 - (R*3-1) meters<br>...<br>'11111' R*31 meters or more<br>where R is the resolution defined by Std Resolution field. E.g. R=20 m corresponds to 0-19 m, 20-39 m, ..., 620+ m. |

## 10.3.7.110 UE positioning reporting criteria

The triggering of the event-triggered reporting for a UE positioning measurement.

| Information Element/Group name   | Need | Multi                | Type and Reference  | Semantics description   | Version |
|--|------|----------------------|---|---|---------|
| Parameters required for each event   | MP   | 1 to <maxMeas Event> |   | Note: need corrected to MP in Rel-7 to align with ASN.1.  |         |
| >Amount of reporting   | MP   |                      | Integer(1, 2, 4, 8, 16, 32, 64,infinite)  |   |         |
| >Report first fix  | MP   |                      | Boolean   | If TRUE the UE reports the position once the measurement control is received, and then each time an event is triggered.         |         |
| >Measurement interval  | MP   |                      | Integer(5,15,60,300,900,1800,3600,7200)   | Indicates how often the UE should make the measurement<br>In seconds  |         |
| >CHOICE Event ID   | MP   |                      |   |   |         |
| >>7a   |      |                      |   |   |         |
| >>>Threshold Position Change   | MP   |                      | Integer(10, 20,30,40,50,100,200, 300,500,1000,2000,5000,10000,20000,50000,100000) | Meters. Indicated how much the position should change compared to last reported position fix in order to trigger the event.     |         |
| >>7b   |      |                      |   |   |         |
| >>>Threshold SFN-SFN change  | MP   |                      | Real(0.25, 0.5,1,2,3,4, 5,10,20,50, 100,200,500,1000,2000,5000)                   | Chips. Indicates how much the SFN-SFN measurement of ANY measured cell is allowed to change before the event is triggered.      |         |
| >>7c   |      |                      |   |   |         |
| >>>Threshold SFN-GPS TOW   | MP   |                      | Integer(1,2, 3,5,10,20, 50,100)   | Time in ms. When the GPS TOW and SFN timer has drifted apart more than the specified value the event is triggered.              |         |
|  |      |                      |   | Time in micro seconds (NOTE 1).   | REL-7   |
| >>7d   |      |                      |   |   | REL-7   |
| >>>Threshold SFN-GANSS TOW   | MP   |                      | Integer(1,2, 3,5,10,20, 50,100)   | Time in micro seconds. When the GANSS TOW and SFN timer has drifted apart more than the specified value the event is triggered. | REL-7   |
| NOTE 1: In previous versions of the protocol, the IE "Threshold SFN-GPS TOW" was provided in units of milli seconds. If the information is provided in units of micro seconds, the UE shall ignore any information provided in units of milli seconds. |      |                      |   |   |         |

### 10.3.7.111 UE positioning reporting quantity

The purpose of the element is to express the allowed/required location method(s), and to provide information desired QoS.

| Information Element/Group name | Need | Multi | Type and Reference                             | Semantics description | Version |
|--------------------------------|------|-------|--|-----------------------|---------|
| Method Type                    | MP   |       | Enumerated( UE assisted, UE based, UE based is |                       |         |

| Information Element/Group name     | Need              | Multi | Type and Reference   | Semantics description  | Version |
|------------------------------------|-------------------|-------|--|--|---------|
|                                    |                   |       | preferred but UE assisted is allowed, UE assisted is preferred but UE based is allowed)  |  |         |
| Positioning Methods                | MP                |       | Enumerated(OTDOA, GPS, OTDOA or GPS, Cell ID)  |  |         |
| Response Time                      | MP                |       | Integer(1,2,4, 8, 16, 32, 64, 128)   | This IE shall be ignored.  |         |
| Horizontal Accuracy                | CV-<br>MethodType |       | Bit string(7)  | The uncertainty is derived from the "uncertainty code" k by $r = 10 * (1.1^k - 1)$ in meters.  |         |
| Vertical Accuracy                  | CV-<br>MethodType |       | Bit string(7)  | The uncertainty is derived from the "uncertainty code" k by $r = 45 * (1.025^k - 1)$ in meters.  |         |
| GPS timing of Cell wanted          | MP                |       | Boolean  | If TRUE the SRNC wants the UE to report the SFN-GPS timing of the reference cell. This is however optional in the UE.  |         |
| Multiple Sets                      | MP                |       | Boolean  | This IE shall be ignored.  |         |
| Additional Assistance Data Request | MP                |       | Boolean  | TRUE indicates that the UE is requested to send the IE "GPS Additional Assistance Data Request" and/or the "IE "GANSS Additional Assistance Data Request" (if the IE "GANSS Positioning Methods" is included) when the IE "UE positioning Error" is present in the UE positioning measured results. FALSE indicates that the UE shall use the assistance data available. |         |
| Environment Characterisation       | OP                |       | Enumerated(possibly heavy multipath and NLOS conditions, no or light multipath and usually LOS conditions, not defined or mixed environment) | One spare value is needed.   |         |
| Velocity Requested                 | OP                |       | Enumerated (TRUE)  | If this element is present the UE is requested to send a velocity estimate   | REL-7   |

NOTE: The network should ensure that priorities for different Radio Access Technologies are always different.

NOTE: The network should ensure that priorities for which both Thresh<sub>x,high2</sub> and Thresh<sub>x,low2</sub> are provided are always different from the priorities for which both Thresh<sub>x,high2</sub> and Thresh<sub>x,low2</sub> are not provided.

| Condition   | Explanation   |
|-------------|---|
| EARFCNBands | This IE is mandatory present when the number of instances of IE "E-UTRA frequency and priority" and IE "E-UTRA frequency and priority extension" combined is greater than maxNumEUTRAFreqs, otherwise it is not needed. |
| WB-RSRQ     | The field is optionally present if the measurement bandwidth indicated by <i>Measurement Bandwidth</i> is 50 resource blocks or larger. Otherwise it is not needed.   |

### 10.3.7.116 Intra-frequency cell info list on secondary UL frequency

NOTE: For FDD only.

Contains the information for the list of measurement objects for an intra-frequency measurement on secondary uplink frequency.

### 10.3.7.137 E-UTRA measurement for CELL\_FACH

NOTE: Only for FDD.

| Information Element/Group name     | Need | Multi                                   | Type and reference                                 | Semantics description  | Version |
|------------------------------------|------|---|--|--|---------|
| E-UTRA frequencies for measurement | MP   | 1 to<br><maxNumEU<br>TRAFreqs_F<br>ACH> |  |  | REL-11  |
| >EARFCN                            | MP   |   | Integer (0..65535)                                 | EARFCN of the downlink carrier frequency [64]. If the IE indicates a value of 65535, then the EARFCN for this instance should be read from the corresponding instance of IE "EARFCN extension" | REL-11  |
| >EARFCN extension                  | OP   |   | Integer (65536..262143)                            | EARFCN of the downlink carrier frequency [64].   | REL-11  |
| Report criteria                    | MP   |   | Enumerated (Event-triggered, Periodical reporting) |  | REL-11  |
| Measurement quantity               | MP   |   | Enumerated (RSRP, RSRQ)                            | This IE indicates the quantity that the UE uses to determine the event trigger.  | REL-11  |
| Reporting Threshold                | MP   |   | Integer (0..97)                                    | In dB. Ranges used depend on measurement quantity: if measurement quantity is RSRQ, range should be (0..34), if measurement quantity is RSRP, range should be (0..97).                         | REL-11  |

## 10.3.7.138 E-UTRA results for CELL\_FACH

NOTE: Only for FDD.

| Information Element/Group name | Need | Multi | Type and reference                 | Semantics description   | Version |
|--------------------------------|------|-------|------------------------------------|---|---------|
| E-UTRA frequency indicator     | MP   |       | Bit string(max NumEUTRAFreqs_FACH) | Bit 0 is the first/leftmost bit of the bit string. Each bit indicates whether the radio quality of an E-UTRA frequency is above the reporting threshold or not, where a one value indicates above and a zero value not. Bit n corresponds to the n-th E-UTRA frequency in the list provided by the IE E-UTRA frequencies for measurement. | REL-11  |

## 10.3.7.139 E-UTRA frequency RACH reporting information

NOTE: Only for FDD.

Contains the reporting configuration information for an E-UTRA frequency measurement report, which is sent on the RACH.

| Information Element/Group name           | Need | Multi | Type and reference           | Semantics description  | Version |
|--|------|-------|------------------------------|--|---------|
| E-UTRA frequency list indicator          | MP   |       | Bit string(maxNumEUTRAFreqs) | Bit 0 is the first/leftmost bit of the bit string. Each bit indicates the E-UTRA frequency that the UE is required to measure and report on RACH. Bit n corresponds to the n-th E-UTRA frequency received in SIB19. Value '1' for a bit means the corresponding E-UTRA frequency has been configured to measure and report on RACH. Max. 4 EUTRA frequencies shall be configured in this version of the specification. | REL-11  |
| E-UTRA frequency RACH reporting quantity | MP   |       | Enumerated (RSRP, RSRQ)      |  | REL-11  |

| Information Element/Group name            | Need | Multi | Type and reference   | Semantics description  | Version |
|---|------|-------|--|--|---------|
| E-UTRA frequency RACH reporting threshold | MP   |       | Integer (0..97)  | In dB. Ranges used depend on measurement quantity: if measurement quantity is RSRQ, range should be (0..34), if measurement quantity is RSRP, range should be (0..97).   | REL-11  |
| RACH reporting priority                   | MD   |       | Enumerated (IntraEUTRAInter, InterIntraEUTRA, InterEUTRAIntra, EUTRAIntraInter, EUTRAInterIntra) | The default value is that E-UTRA measurements shall be omitted first, followed by limiting the number of inter-frequency cells, before limiting the number of intra-frequency cells. Measurement result for the current cell shall be omitted last. Three spare values are needed. | REL-11  |

### 10.3.8 Other Information elements

#### 10.3.8.1 BCCH modification info

Indicates modification of the System Information on BCCH.

| Information Element/Group name | Need | Multi | Type and reference             | Semantics description                                  |
|--------------------------------|------|-------|--------------------------------|--|
| MIB Value tag                  | MP   |       | MIB Value tag 10.3.8.9         |  |
| BCCH modification time         | OP   |       | Integer (0..4088 in step of 8) | All SFN values in which MIB may be mapped are allowed. |

#### 10.3.8.2 BSIC

| Information Element/Group name                | Need | Multi | Type and reference | Semantics description  |
|---|------|-------|--------------------|--|
| Base transceiver Station Identity Code (BSIC) | MP   |       |                    | [11]   |
| >Network Colour Code (NCC)                    | MP   |       | bit string(3)      | The first/leftmost bit of the bit string contains the most significant bit of the NCC. |
| >Base Station Colour Code (BCC)               | MP   |       | bit string(3)      | The first/leftmost bit of the bit string contains the most significant bit of the BCC. |

#### 10.3.8.3 CBS DRX Level 1 information

This information element contains the CBS discontinuous reception information to be broadcast for CBS DRX Level 1 calculations in the UE.

| Information Element/Group name        | Need    | Multi | Type and reference                | Semantics description                                  | Version |
|---------------------------------------|---------|-------|-----------------------------------|--|---------|
| Period of CTCH allocation (N)         | MP      |       | Integer (1..256)                  | $M_{TTI} \leq N \leq 256$ ,<br>N multiple of $M_{TTI}$ |         |
| CBS frame offset (K)                  | MP      |       | Integer (0..255)                  | $0 \leq K \leq N-1$ ,<br>K multiple of $M_{TTI}$       |         |
| Period of BMC scheduling messages (P) | CV-SIB5 |       | Integer (8, 16, 32, 64, 128, 256) |  | REL-6   |

| Condition | Explanation  |
|-----------|--|
| SIB5      | The IE is optional when the IE "CBS DRX Level 1 information" in SIB5, otherwise the IE is not needed |

#### 10.3.8.4 Cell Value tag

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|--------------------|-----------------------|
| Cell Value tag                 | MP   |       | Integer (1..4)     |                       |

#### 10.3.8.4a Ellipsoid point

This IE contains the description of an ellipsoid point as in [24].

| Information Element/Group name | Need | Multi | Type and Reference                   | Semantics description   |
|--------------------------------|------|-------|--------------------------------------|---|
| Latitude sign                  | MP   |       | Enumerated (North, South)            |   |
| Degrees Of Latitude            | MP   |       | Integer (0... $2^{23}-1$ )           | The IE value ( $N$ ) is derived by this formula:<br>$N \leq 2^{23} X / 90 < N+1$<br>X being the latitude in degree (0°.. 90°)       |
| Degrees Of Longitude           | MP   |       | Integer (- $2^{23}$ ... $2^{23}-1$ ) | The IE value ( $N$ ) is derived by this formula:<br>$N \leq 2^{24} X / 360 < N+1$<br>X being the longitude in degree (-180°..+180°) |

#### 10.3.8.4b Ellipsoid point with Altitude

This IE contains the description of an ellipsoid point with altitude as in [24].

| Information Element/Group name | Need | Multi | Type and Reference                   | Semantics description   |
|--------------------------------|------|-------|--------------------------------------|---|
| Latitude sign                  | MP   |       | Enumerated (North, South)            |   |
| Degrees Of Latitude            | MP   |       | Integer (0... $2^{23}-1$ )           | The IE value ( $N$ ) is derived by this formula:<br>$N \leq 2^{23} X / 90 < N+1$<br>X being the latitude in degree (0°.. 90°)       |
| Degrees Of Longitude           | MP   |       | Integer (- $2^{23}$ ... $2^{23}-1$ ) | The IE value ( $N$ ) is derived by this formula:<br>$N \leq 2^{24} X / 360 < N+1$<br>X being the longitude in degree (-180°..+180°) |

| Information Element/Group name | Need | Multi | Type and Reference              | Semantics description  |
|--------------------------------|------|-------|---------------------------------|--|
| Altitude Direction             | MP   |       | Enumerated (Height, Depth)      |  |
| Altitude                       | MP   |       | Integer (0..2 <sup>15</sup> -1) | The IE value ( <i>N</i> ) is derived by this formula:<br>$N \leq a < N+1$<br><i>a</i> being the altitude in metres |

#### 10.3.8.4c Ellipsoid point with Altitude and uncertainty ellipsoid

This IE contains the description of an ellipsoid point with altitude and uncertainty ellipsoid as in [24].

| Information Element/Group name | Need | Multi | Type and Reference                               | Semantics description   |
|--------------------------------|------|-------|--|---|
| Latitude sign                  | MP   |       | Enumerated (North, South)                        |   |
| Degrees Of Latitude            | MP   |       | Integer (0...2 <sup>23</sup> -1)                 | The IE value ( <i>N</i> ) is derived by this formula:<br>$N \leq 2^{23} X / 90 < N+1$<br><i>X</i> being the latitude in degree (0°.. 90°)   |
| Degrees Of Longitude           | MP   |       | Integer (-2 <sup>23</sup> ...2 <sup>23</sup> -1) | The IE value ( <i>N</i> ) is derived by this formula:<br>$N \leq 2^{24} X / 360 < N+1$<br><i>X</i> being the longitude in degree (-180°..+180°)   |
| Altitude Direction             | MP   |       | Enumerated (Height, Depth)                       |   |
| Altitude                       | MP   |       | Integer (0..2 <sup>15</sup> -1)                  | The IE value ( <i>N</i> ) is derived by this formula:<br>$N \leq a < N+1$<br><i>a</i> being the altitude in metres  |
| Uncertainty semi-major         | MP   |       | Integer (0...127)                                | The uncertainty <i>r</i> is derived from the "uncertainty code" <i>k</i> by<br>$r = 10 \times (1.1^k - 1)$  |
| Uncertainty semi-minor         | MP   |       | Integer (0...127)                                | The uncertainty <i>r</i> is derived from the "uncertainty code" <i>k</i> by<br>$r = 10 \times (1.1^k - 1)$  |
| Orientation of major axis      | MP   |       | Integer (0..89)                                  | The IE value ( <i>N</i> ) is derived by this formula:<br>$2N \leq a < 2(N+1)$<br><i>a</i> being the orientation in degree (0°.. 179°)   |
| Uncertainty Altitude           | MP   |       | Integer(0..127)                                  | The uncertainty in altitude, <i>h</i> , expressed in metres is mapped from the IE value ( <i>K</i> ), with the following formula:<br>$h = C \left( (1+x)^K - 1 \right)$<br>with <i>C</i> = 45 and <i>x</i> = 0.025. |
| Confidence                     | MP   |       | Integer (0..100)                                 | in percentage   |

### 10.3.8.4d Ellipsoid point with uncertainty Circle

This IE contains the description of an ellipsoid point with an uncertainty circle as in [24].

| Information Element/Group name | Need | Multi | Type and Reference                               | Semantics description   |
|--------------------------------|------|-------|--|---|
| Latitude sign                  | MP   |       | Enumerated (North, South)                        |   |
| Degrees Of Latitude            | MP   |       | Integer (0...2 <sup>23</sup> -1)                 | The IE value (N) is derived by this formula:<br>$N \leq 2^{23} X / 90 < N+1$<br>X being the latitude in degree (0°.. 90°)       |
| Degrees Of Longitude           | MP   |       | Integer (-2 <sup>23</sup> ...2 <sup>23</sup> -1) | The IE value (N) is derived by this formula:<br>$N \leq 2^{24} X / 360 < N+1$<br>X being the longitude in degree (-180°..+180°) |
| Uncertainty Code               | MP   |       | Integer (0...127)                                | The uncertainty <i>r</i> is derived from the "uncertainty code" <i>k</i> by<br>$r = 10 \times (1.1^k - 1)$                      |

### 10.3.8.4e Ellipsoid point with uncertainty Ellipse

This IE contains the description of an ellipsoid point with an uncertainty ellipse as in [24].

| Information Element/Group name | Need | Multi | Type and Reference                               | Semantics description   |
|--------------------------------|------|-------|--|---|
| Latitude sign                  | MP   |       | Enumerated (North, South)                        |   |

| System Information Type 15.1bis,<br>System Information Type 15.2bis,<br>System Information Type 15.2ter,<br>System Information Type 15.3bis,<br>System Information Type 15.6,<br>System Information Type 15.7<br>System Information Type 15.8 | REL-8   |

### 10.3.8.19 SIB data fixed

Contains the result of a master information block or a system information block after encoding and segmentation. The IE is used for segments with fixed length (segments filling an entire transport block).

| Information Element/Group name | Need | Multi | Type and reference | Semantics description                                |
|--------------------------------|------|-------|--------------------|--|
| SIB data fixed                 | MP   |       | Bit string (222)   | The first bit contains the first bit of the segment. |

### 10.3.8.20 SIB data variable

Contains either a complete system information block or a segment of a system information block. Contains the result of a master information block or a system information block after encoding and segmentation. The IE is used for segments with variable length. The system information blocks are defined in clauses 10.2.48.8.1 to 10.2.48.8.18.

| Information Element/Group name | Need | Multi | Type and reference  | Semantics description                                |
|--------------------------------|------|-------|---------------------|--|
| SIB data variable              | MP   |       | Bit string (1..214) | The first bit contains the first bit of the segment. |

### 10.3.8.20a SIB occurrence identity

This information element identifies a SIB occurrence for System Information Block types 15.2, 15.2bis, 15.2ter, 15.3 and 15.3bis. For System Information Block type 15.2, 15.2bis and 15.2ter, this identity is assigned to the visible satellite only. Unused identities are claimed by newly rising satellites.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|--------------------|-----------------------|
| SIB occurrence identity        | MP   |       | Integer (0..15)    |                       |

## 10.3.8.20b SIB occurrence identity and value tag

| Information Element/Group name | Need | Multi | Type and reference                     | Semantics description |
|--------------------------------|------|-------|--|-----------------------|
| SIB occurrence identity        | MP   |       | SIB occurrence identity<br>10.3.8.20a  |                       |
| SIB occurrence value tag       | MP   |       | SIB occurrence value tag<br>10.3.8.20c |                       |

## 10.3.8.20c SIB occurrence value tag

This information element is used to identify different versions of SIB occurrence for System Information Block types 15.2, 15.2bis, 15.2ter, 15.3 and 15.3bis.

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description |
|--------------------------------|------|-------|--------------------|-----------------------|
| SIB occurrence value tag       | MP   |       | Integer(0..15)     |                       |

## 10.3.8.21 SIB type

The SIB type identifies a specific system information block.

| Information Element/Group name  | Need | Multi | Type and reference    | Semantics description |
|---|------|-------|-----------------------|-----------------------|
| SIB type  | MP   |       | Enumerated, see below | NOTE 1                |
| NOTE 1: If the value "Extension Type" is signalled, the UE shall use the scheduling information in the MIB and, if present, in the SB1 and SB2 to identify the specific type of system information block. |      |       |                       |                       |

| List of enumerated values  | Version |
|--|---------|
| Master information block,<br>System Information Type 1,<br>System Information Type 2,<br>System Information Type 3,<br>System Information Type 4,<br>System Information Type 5,<br>System Information Type 6,<br>System Information Type 7,<br>System Information Type 11,<br>System Information Type 12,<br>System Information Type 13,<br>System Information Type 13.1,<br>System Information Type 13.2,<br>System Information Type 13.3,<br>System Information Type 13.4,<br>System Information Type 14,<br>System Information Type 15,<br>System Information Type 15.1,<br>System Information Type 15.2,<br>System Information Type 15.3,<br>System Information Type 15.4,<br>System Information Type 15.5,<br>System Information Type 16,<br>System Information Type 17,<br>System Information Type 18,<br>Scheduling Block 1,<br>Scheduling Block 2, |         |
| System Information Type 5bis,<br>Extension Type  | REL-6   |

### 10.3.8.22 SIB type SIBs only

The SIB type identifies a specific system information block.

| Information Element/Group name | Need | Multi | Type and reference    | Semantics description        |
|--------------------------------|------|-------|-----------------------|------------------------------|
| SIB type SIBs only             | MP   |       | Enumerated, see below | Four spare values are needed |

| List of enumerated values   | Version |
|---|---------|
| System Information Type 1,<br>System Information Type 2,<br>System Information Type 3,<br>System Information Type 4,<br>System Information Type 5,<br>System Information Type 6,<br>System Information Type 7,<br>System Information Type 11,<br>System Information Type 12,<br>System Information Type 13,<br>System Information Type 13.1,<br>System Information Type 13.2,<br>System Information Type 13.3,<br>System Information Type 13.4,<br>System Information Type 14,<br>System Information Type 15,<br>System Information Type 15.1,<br>System Information Type 15.2,<br>System Information Type 15.3,<br>System Information Type 15.4,<br>System Information Type 15.5,<br>System Information Type 16,<br>System Information Type 17,<br>System Information Type 18, |         |
| System Information Type 5bis  | REL-6   |

### 10.3.8.23 UE History Information

| Information element/Group name | Need | Multi | Type and reference                 | Semantics description  | Version |
|--------------------------------|------|-------|------------------------------------|--|---------|
| UE inactivity period           | MP   |       | Integer (1..120)                   | Provides expired time since last u-plane activity. If the integer value x is between 1 and 59, it represents the expired time x in seconds. If the integer value x is between 60 and 119, it represents the expired time (x-59) in minutes. If integer value is set to 120, no u-plane activity has been for 60 minutes or more. | REL-8   |
| UE Mobility State indicator    | OP   |       | Enumerated (High-mobilityDetected) | Absence of this IE implies that, according to [4] either the High mobility state is not applicable or it has not been detected by the UE.  | REL-8   |
| UL data volume history         | OP   |       | Data volume history 10.3.8.24      |  | REL-8   |
| DL data volume history         | OP   |       | Data volume history 10.3.8.24      |  | REL-8   |

## 10.3.8.24 Data volume history

| Information element/Group name           | Need | Multi        | Type and reference                                      | Semantics description   | Version |
|--|------|--------------|---|---|---------|
| Data volume monitoring window            | MP   |              | Integer (1..120)  | If the integer value x is between 1 and 59, it represents seconds. If the integer value is between 60 and 120, it represents the the value minus 59 in minutes.   | REL-8   |
| Data transmission frequency              | OP   |              | Integer (100, 250, 500, 1000, 2000, 5000, 10000, 60000) | In ms   | REL-8   |
| >Data transmission frequency granularity | MP   |              | Integer (100, 250, 500, 1000, 2000, 5000, 10000, 60000) | In ms   | REL-8   |
| >Number of data transmission occasions   | MP   |              | Integer (0..610)  | Measure of data transmission frequency. The data volume monitoring window is organised in time periods of "Data transmission frequency granularity", and each transmission within such a period is counted. | REL-8   |
| Data volume per RB                       | OP   | 1 to <maxRB> |   |   | REL-8   |
| >RB identity                             | MP   |              | RB identity 10.3.4.16                                   |   | REL-8   |
| >Data volume                             | MP   |              | Integer (0..4294967 295)                                | Data volume monitored during the data volume monitoring window, in byte.  | REL-8   |

## 10.3.9 ANSI-41 Information elements

## 10.3.9.1 ANSI-41 Core Network Information

| Information element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|--------------------|-----------------------|
| P_REV                          | MP   |       | P_REV 10.3.9.10    |                       |
| MIN_P_REV                      | MP   |       | MIN_P_REV 10.3.9.8 |                       |
| SID                            | MP   |       | SID 10.3.9.11      |                       |
| NID                            | MP   |       | NID 10.3.9.9       |                       |

## 10.3.9.2 ANSI-41 Global Service Redirection information

This Information Element contains ANSI-41 Global Service Redirection information.

| Information Element/Group name                 | Need | Multi | Type and reference              | Semantics description  |
|--|------|-------|---------------------------------|--|
| ANSI-41 Global Service Redirection information | MP   |       | ANSI-41 NAS parameter, 10.3.9.3 | Formatted and coded according to the 3GPP2 document "G3G CDMA DS on ANSI-41" |

### 10.3.9.3 ANSI-41 NAS parameter

This Information Element contains ANSI-41 User Zone Identification information.

| Information Element/Group name | Need | Multi | Type and reference          | Semantics description  |
|--------------------------------|------|-------|-----------------------------|--|
| ANSI-41 NAS parameter          | MP   |       | Bit string (size (1..2048)) | The first bit contains the first bit of the ANSI-41 information. |

### 10.3.9.4 ANSI-41 NAS system information

This Information Element contains ANSI-41 system information.

| Information Element/Group name   | Need | Multi | Type and reference              | Semantics description  |
|----------------------------------|------|-------|---------------------------------|--|
| NAS (ANSI-41) system information | MP   |       | ANSI-41 NAS parameter, 10.3.9.3 | Formatted and coded according to the 3GPP2 document "G3G CDMA DS on ANSI-41" |

### 10.3.9.5 ANSI-41 Private Neighbour List information

This Information Element contains ANSI-41 Private Neighbour List information.

| Information Element/Group name             | Need | Multi | Type and reference              | Semantics description  |
|--|------|-------|---------------------------------|--|
| ANSI-41 Private Neighbour List information | MP   |       | ANSI-41 NAS parameter, 10.3.9.3 | Formatted and coded according to the 3GPP2 document "G3G CDMA DS on ANSI-41" |

### 10.3.9.6 ANSI-41 RAND information

This Information Element contains ANSI-41 RAND information.

| Information Element/Group name | Need | Multi | Type and reference              | Semantics description  |
|--------------------------------|------|-------|---------------------------------|--|
| ANSI-41 RAND information       | MP   |       | ANSI-41 NAS parameter, 10.3.9.3 | Formatted and coded according to the 3GPP2 document "G3G CDMA DS on ANSI-41" |

### 10.3.9.7 ANSI-41 User Zone Identification information

This Information Element contains ANSI-41 User Zone Identification information.

| Information Element/Group name               | Need | Multi | Type and reference              | Semantics description  |
|--|------|-------|---------------------------------|--|
| ANSI-41 User Zone Identification information | MP   |       | ANSI-41 NAS parameter, 10.3.9.3 | Formatted and coded according to the 3GPP2 document "G3G CDMA DS on ANSI-41" |

### 10.3.9.8 MIN\_P\_REV

This Information Element contains minimum protocol revision level.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description   |
|--------------------------------|------|-------|--------------------|---|
| MIN_P_REV                      | MP   |       | Bit string (8)     | Minimum protocol revision level. The first/leftmost bit of the bit string contains the most significant bit of the MIN_P_REV. |

### 10.3.9.9 NID

This Information Element contains Network identification.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description  |
|--------------------------------|------|-------|--------------------|--|
| NID                            | MP   |       | Bit string (16)    | Network identification. The first/leftmost bit of the bit string contains the most significant bit of the NID. |

### 10.3.9.10 P\_REV

This Information Element contains protocol revision level.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description   |
|--------------------------------|------|-------|--------------------|---|
| P_REV                          | MP   |       | Bit string (8)     | Protocol revision level. The first/leftmost bit of the bit string contains the most significant bit of the P_REV. |

### 10.3.9.11 SID

This Information Element contains System identification.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description   |
|--------------------------------|------|-------|--------------------|---|
| SID                            | MP   |       | Bit string (15)    | System identification. The first/leftmost bit of the bit string contains the most significant bit of the SID. |

## 10.3.9a MBMS Information elements

### 10.3.9a.1 MBMS Common CCTrCH identity

Identifies a Coded Composite Transport channel configuration included within the MBMS COMMON P-T-M RB INFORMATION message.

| Information element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|-------|--------------------|-----------------------|---------|
| MBMS Common CCTrCh identity    | MP   |       | Integer (1..32)    |                       | REL-6   |

### 10.3.9a.2 MBMS Common PhyCh identity

Identifies a physical channel configuration included within the MBMS COMMON P-T-M RB INFORMATION message.

| Information element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|-------|--------------------|-----------------------|---------|
| MBMS Common PhyCh identity     | MP   |       | Integer (1..32)    |                       | REL-6   |

### 10.3.9a.3 MBMS Common RB identity

Identifies a radio bearer channel configuration included within the MBMS COMMON P-T-M RB INFORMATION message.

| Information element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|-------|--------------------|-----------------------|---------|
| MBMS Common RB identity        | MP   |       | Integer (1..32)    |                       | REL-6   |

### 10.3.9a.4 MBMS Common TrCh identity

Identifies a transport channel configuration included within the MBMS COMMON P-T-M RB INFORMATION message.

| Information element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|-------|--------------------|-----------------------|---------|
| MBMS Common TrCh identity      | MP   |       | Integer (1..32)    |                       | REL-6   |

### 10.3.9a.5 MBMS Current cell S-CCPCH identity

Identifies one of the current cell's Secondary CCPCH's.

| Information element/Group name     | Need | Multi | Type and reference      | Semantics description | Version |
|------------------------------------|------|-------|-------------------------|-----------------------|---------|
| MBMS Current cell S-CCPCH identity | MP   |       | Integer (1..maxSC CPCH) |                       | REL-6   |

### 10.3.9a.6 Void

### 10.3.9a.7 MBMS L1 combining schedule

Includes information about the MBMS L1 combining schedule.

| Information element/Group name | Need | Multi               | Type and reference  | Semantics description  | Version |
|--------------------------------|------|---------------------|---|--|---------|
| MBMS L1 combining cycle length | MP   |                     | Enumerated (32, 64, 128, 256, 512, 1024)                      | In number of radio frames  | REL-6   |
| MBMS L1 combining cycle offset | MD   |                     | Integer (0.. MBMS L1 combining cycle length - 4) by step of 4 | Start of the L1 combining cycle (relative to the timing of the current cell) in number of radio frames. Default value is no offset | REL-6   |
| MTCH L1- combining period list | MP   | 1 to <maxMBMS-L1CP> |   | One or more periods in which L1 combining is performed   | REL-6   |
| >Start                         | MP   |                     | Integer (0.. MBMS L1 combining cycle length - 4) by step of 4 | Number of frames from the end of the previous combining period or the start of the cycle (for the first period)                    | REL-6   |
| >Duration                      | MP   |                     | Integer (4.. MBMS L1 combining cycle length) by step of 4     | Number of frames (see note)  | REL-6   |

NOTE: The MTCH L1- combining period should indicate one or more complete TTIs.

### 10.3.9a.7o MBMS p-t-m activation time

| Information Element/Group name   | Need | Multi | Type and reference | Semantics description                | Version |
|--|------|-------|--------------------|--------------------------------------|---------|
| MBMS p-t-m activation time   | MP   |       | Integer (0..2047)  | The 11 LSB of the SFN. Note 1 and 2. | REL-6   |
| Note 1: The "MBMS p-t-m activation time" indicates the start of the 10 ms frame corresponding to the indicated SFN value and of the primary CCPCH of the cell where this IE is transmitted.  |      |       |                    |                                      |         |
| Note 2: The range of the "MBMS p-t-m activation time" is from 10 ms after the beginning of the MCCH modification period wherein it is transmitted and to the end of next following MCCH modification period. The UE shall consider a value out of this range as expired. |      |       |                    |                                      |         |

## 10.3.9a.7a MBMS p-t-m RB information

Includes information about an MBMS p-t-m radio bearers mapped on a TrCH.

| Information element/Group name | Need            | Multi | Type and reference                          | Semantics description   | Version |
|--------------------------------|-----------------|-------|---|---|---------|
| RB information                 | <i>CV-Curr</i>  |       | MBMS Common RB identity 10.3.9a.3           |   | REL-6   |
| MBMS short transmission ID     | MP              |       | MBMS Short transmission identity 10.3.9a.10 |   | REL-6   |
| MBMS logical channel identity  | MP              |       | Integer (1..15)                             | This identifier is used to distinguish different TrCH mapped on to a TrCh ("MBMS-Id" within the MAC header[15])                           | REL-6   |
| L1 combining status            | <i>CV-Neigh</i> |       | Boolean                                     | The IE is only applicable in case of partial L1 combining, in which case value TRUE means that L1 combining is used for this radio bearer | REL-6   |

| Condition    | Explanation  |
|--------------|--|
| <i>Curr</i>  | The IE is mandatory present if the IE "MBMS p-t-m RB information list" is included in the MBMS CURRENT CELL P-T-M RB INFORMATION message and not needed otherwise      |
| <i>Neigh</i> | The IE is mandatory present if the IE "MBMS p-t-m RB information list" is included in the MBMS NEIGHBOURING CELL P-T-M RB INFORMATION message and not needed otherwise |

## 10.3.9a.7b MBMS Selected Service Info

This IE indicates whether the UE has any MBMS Selected Services, and if it does it includes the list of MBMS Selected Services.

| Information element/Group name | Need | Multi | Type and reference                     | Semantics description | Version |
|--------------------------------|------|-------|--|-----------------------|---------|
| CHOICE <i>Status</i>           |      |       |  |                       |         |
| >None                          |      |       |  | (no data)             |         |
| >Some                          | MP   |       | MBMS Selected Services Full 10.3.9a.7c |                       | REL-6   |

### 10.3.9a.7c MBMS Selected Services Full

This IE provides the MBMS Selected Services by means of the full identity.

| Information element/Group name | Need | Multi                    | Type and reference              | Semantics description | Version |
|--------------------------------|------|--------------------------|---------------------------------|-----------------------|---------|
| MBMS Selected Services         | MP   | 1 to <maxMBMSservSelect> |                                 |                       | REL-6   |
| >MBMS Selected Service ID      | MP   |                          | MBMS service identity 10.3.9a.8 |                       | REL-6   |

### 10.3.9a.7d MBMS Selected Services Short

This IE indicates the MBMS Selected Services by means of a short identity to identify the MBMS transmission by referencing the services included in the MBMS MODIFIED SERVICES INFORMATION and the MBMS UNMODIFIED SERVICES INFORMATION messages.

| Information element/Group name | Need | Multi                    | Type and reference                          | Semantics description   | Version |
|--------------------------------|------|--------------------------|---|---|---------|

### 10.3.9a.8a MBMS Service ID

Uniquely identifies an MBMS bearer service within a PLMN.

| Information element/Group name | Need | Multi | Type and reference | Semantics description   | Version |
|--------------------------------|------|-------|--------------------|---|---------|
| MBMS Service ID                | MP   |       | Octet string (3 )  | The content of the MBMS Service ID field is coded as octets 3 to 5 of the IE <i>Temporary Mobile Group Identity</i> [5] | REL-6   |

### 10.3.9a.9 MBMS Session identity

Includes information about the the identity of a session of an MBMS service.

| Information element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|-------|--------------------|-----------------------|---------|
| MBMS Session ID                | MP   |       | Octet string (1)   |                       | REL-6   |

### 10.3.9a.10 MBMS Short transmission identity

Includes a short identity of the MBMS transmission identity, which concerns a session of a specific service.

| Information element/Group name   | Need | Multi | Type and reference              | Semantics description   | Version |
|----------------------------------|------|-------|---------------------------------|---|---------|
| MBMS short transmission identity | MP   |       | Integer (1..maxMBMSservUnmodif) | Reference/ index to a transmission listed in the MBMS MODIFIED SERVICES INFORMATION or MBMS UNMODIFIED SERVICES INFORMATION | REL-6   |

### 10.3.9a.10a MBMS Soft Combining Timing Offset

Indicates the timing offset applied in the CFN calculation in sub-clause 8.5.15.5 for a secondary CCPCH carrying only MBMS logical channels. It is used for FDD only.

| Information Element/Group name     | Need | Multi | Type and reference      | Semantics description   | Version |
|------------------------------------|------|-------|-------------------------|---|---------|
| >MBMS Soft Combining Timing Offset | MP   |       | Integer (0, 10, 20, 40) | Timing offset applied in the CFN calculation in sub-clause 8.5.15.5, in ms. | REL-6   |

### 10.3.9a.11 MBMS specific timers and counters

Includes MBMS specific timers and counters.

| Information element/Group name | Need | Multi | Type and reference  | Semantics description                         | Version |
|--------------------------------|------|-------|---|---|---------|
| T318                           | MD   |       | Integer(25 0... 2000 by step of 250, 3000, 4000, 6000, 8000, 10000, 12000, 16000) | Value in milliseconds. Default value is 1000. | REL-6   |

### 10.3.9a.12 MBMS Transmission identity

Includes information about the MBMS transmission identity, which concerns a session of a specific service.

| Information element/Group name | Need | Multi | Type and reference              | Semantics description | Version |
|--------------------------------|------|-------|---------------------------------|-----------------------|---------|
| MBMS Service ID                | MP   |       | MBMS Service identity 10.3.9a.8 |                       | REL-6   |
| MBMS Session ID                | OP   |       | MBMS Session identity 10.3.9a.9 |                       | REL-6   |

### 10.3.9a.12a MBSFN frequency list

| Information Element/Group name | Need | Multi    | Type and reference         | Semantics description   | Version |
|--------------------------------|------|----------|----------------------------|---|---------|
| MBSFN frequency list           | MP   |          | 0 to <maxMBSFNclusters >   |   | REL-7   |
| >MBSFN frequency               | MP   |          | Frequency info 10.3.6.36   |   | REL-7   |
| >IMB indication                | OP   |          | Enumerated (TRUE)          | If present: 3.84 Mcps TDD MBSFN IMB is applied on this frequency. | REL-8   |
| >Cell parameter ID             | OP   | <0..127> | Cell parameter Id 10.3.6.9 | Only for 1.28 Mcps TDD [32]. NOTE 1                               | REL-7   |

NOTE 1: For 1.28 Mcps TDD the IE "Cell Parameter ID" indicates the cell which is providing MBMS service in MBSFN only mode on the corresponding frequency; if it is not included, the IE "MBSFN frequency" indicates the secondary frequency providing MBMS service in non-MBSFN only mode of current multi-frequency cell.

## 10.3.9a.12b MBSFN TDM Information List

| Information element/Group name | Need | Multi                         | Type and reference                          | Semantics description | Version |
|--------------------------------|------|-------------------------------|---|-----------------------|---------|
| MBSFN TDM Information List     | MP   | 1 to <maxM BMSservUnmodified> |   |                       | REL-7   |

| TCTF presence                  | OP   |       | Enumerated (FALSE)                       | By default the TCTF is present even though the FACH only carries one logical channel (type). When this IE is included, the TCTF is absent  | REL-6   |

### 10.3.9a.17 Network Standard Time Information

NOTE: Only for 1.28Mcps TDD

This IE includes information about the Network Standard Time and a related SFN value. If Correlative SFN is absent, the default Correlative SFN is equal to zero, this means the "Network Standard Time" indicate the standard time value when SFN equal zero.

The "Network Standard Time" occupied 40 bits; the format refers to "ETSI EN 300 468 V1.5.1 (2003-05)".

| Information Element/Group name | Need | Multi | Type and reference | Semantics description   | Version |
|--------------------------------|------|-------|--------------------|---|---------|
| Network Standard Time          | MP   |       | BIT STRING (40)    | Network Standard Time   | REL-8   |
| Correlative SFN                | OP   |       | Integer (0..4095)  | System frame number which is correlative with Network Standard Time Information. If it is absent, Correlative SFN is equal to zero. | REL-8   |

### 10.3.10 Multiplicity values and type constraint values

The following table includes constants that are either used as multi bounds (name starting with "max") or as high or low value in a type specification (name starting with "lo" or "hi"). Constants are specified only for values appearing more than once in the RRC specification. In case a constant is related to one or more other constants, an expression is included in the "value" column instead of the actual value.

| Constant                          | Explanation   | Value           | Version |
|-----------------------------------|---|-----------------|---------|
| <b>CN information</b>             |   |                 |         |
| maxCNdomains                      | Maximum number of CN domains  | 4               |         |
| <b>UTRAN mobility information</b> |   |                 |         |
| maxRAT                            | Maximum number of Radio Access Technologies   | maxOtherRAT + 1 |         |
| maxOtherRAT                       | Maximum number of other Radio Access Technologies   | 15              |         |
| maxURA                            | Maximum number of URAs in a cell  | 8               |         |
| maxInterSysMessages               | Maximum number of Inter System Messages   | 4               |         |

| maxFreqBands TDD                  | Maximum number of frequency bands supported by the UE as defined in [22]                      | 4               |         |
| maxFreqBands TDD-ext              | Maximum number of frequency bands supported by the UE as defined in [22]                      | 16              | REL-8   |
| maxFreqBands GSM                  | Maximum number of frequency bands supported by the UE as defined in [45]                      | 16              |         |
| maxFreqBands EUTRA                | Maximum number of frequency bands supported by the UE as defined in [36.101]                  | 16              | REL-8   |
| maxFreqBands EUTRA-ext            | Maximum number of frequency bands supported by the UE as defined in [36.101]                  | 48              | REL-11  |
| maxFreqBandsIndicatorSupport      | Maximum number of frequency bands broadcasted in SIB5/5bis                                    | 2               | REL-10  |

| Constant                 | Explanation  | Value   | Version |
|--------------------------|--|---|---------|
| maxPage1                 | Number of UEs paged in the Paging Type 1 message   | 8   |         |
| maxSystemCapability      | Maximum number of system specific capabilities that can be requested in one message.                                     | 16  |         |
| MaxURNtIgroup            | Maximum number of U-RNTI groups in one message   | 8   | REL-5   |
| maxCommonHRNTI           | Maximum number of common H-RNTI per cell   | 4   | REL-7   |
| maxERNtIgroup            | Maximum number of common E-RNTI group per cell (1.28 Mcps TDD)   | 32  | REL-8   |
| maxERNtIperGroup         | Maximum number of common E-RNTI in a group (1.28 Mcps TDD)   | 2   | REL-8   |
| <b>RB information</b>    |  |   |         |
| maxPredefConfig          | Maximum number of predefined configurations  | 16  |         |
| maxRB                    | Maximum number of RBs  | 32  |         |
| maxSRBsetup              | Maximum number of signalling RBs to be established   | 8   |         |
| maxRBperRAB              | Maximum number of RBs per RAB  | 8   |         |
| maxRBallRABs             | Maximum number of non signalling RBs   | 27  |         |
| maxRBperTrCh             | Maximum number of RB per TrCh  | 16  | REL-6   |
| maxRBMuxOptions          | Maximum number of RB multiplexing options  | 8   |         |
| maxLoCHperRLC            | Maximum number of logical channels per RLC entity  | 2   |         |
| maxRLCPDUsizePerLogChan  | Maximum number of RLC PDU sizes per logical channel mapped on E-DCH  | 32  | REL-6   |
| MaxROHC-PacketSizes      | Maximum number of packetsizes that are allowed to be produced by ROHC.   | 16  |         |
| MaxROHC-Profiles         | Maximum number of profiles supported by ROHC on a given RB.  | 8   |         |
| maxRFC 3095-CID          | Maximum number of available CID values per radio bearer  | 16384   | REL-5   |
| <b>TrCH information</b>  |  |   |         |
| maxCommonQueueID         | Maximum number of common Mac-ehs queues  | 2   | REL-7   |
| maxE-DCHMACdFlow         | Maximum number of E-DCH MAC-d flows  | 8   | REL-6   |
| MaxHProcesses            | Maximum number of H-ARQ processes  | 8   | REL-5   |
| MaxHSDSCH_TB_index       | Maximum number of TB set size configurations for the HS-DSCH.  | 64 (FDD and 1.28 MCPS TDD); 512 (3.84 Mcps TDD); 1024 (7.68 Mcps TDD) | REL-5   |
| maxMACdPDUSizes          | Maximum number of MAC-d PDU sizes per queue permitted for MAC-hs   | 8   | REL-5   |
| maxTrCH                  | Maximum number of transport channels used in one direction (UL or DL)  | 32  |         |
| maxTrCHpreconf           | Maximum number of preconfigured Transport channels, per direction  | 16  |         |
| maxCCTrCH                | Maximum number of CCTrCHs  | 8   |         |
| maxQueueID               | Maximum number of Mac-hs queues  | 8   | REL-5   |
| MaxTF                    | Maximum number of different transport formats that can be included in the Transport format set for one transport channel | 32  |         |
| maxTFC                   | Maximum number of Transport Format Combinations  | 1024  |         |
| maxTFCsub                | Maximum number of Transport Format Combinations Subset   | 1024  |         |
| maxSIBperMsg             | Maximum number of complete system information blocks per SYSTEM INFORMATION message                                      | 16  |         |
| maxSIB                   | Maximum number of references to other system information blocks.   | 32  |         |
| maxSIB-FACH              | Maximum number of references to system information blocks on the FACH  | 8   |         |
| <b>PhyCH information</b> |  |   |         |
| maxHSSCCHs               | Maximum number of HSSCCH codes that can be assigned to a UE  | 4   | REL-5   |

| Constant                               | Explanation   | Value   | Version |
|--|---|---|---------|
| maxHS-SCCHLessTrBlk                    | Maximum number of HS-DSCH Transport Block Sizes used for HS-SCCH-less operation   | [4]   | REL-7   |
| maxTDD128Carrier                       | The maximum number of carriers for 1.28 Mcps TDD  | 6   | REL-7   |
| maxAC                                  | Maximum number of access classes  | 16  |         |
| maxASC                                 | Maximum number of access service classes  | 8   |         |
| maxASCmap                              | Maximum number of access class to access service classes mappings   | 7   |         |
| maxASCpersist                          | Maximum number of access service classes for which persistence scaling factors are specified  | 6   |         |
| maxPRACH                               | Maximum number of PRACHs in a cell  | 16  |         |
| maxEDCHs                               | Maximum number of common E-DCH resources in a cell  | 32  | REL-8   |
| maxPRACH_EUL                           | Maximum number of PRACH preamble control parameters (for Enhanced Uplink) in a cell   | 4   | REL-11  |
| MaxPRACH_FPACH                         | Maximum number of PRACH / FPACH pairs in a cell (1.28 Mcps TDD)   | 8   | REL-4   |
| maxFACHPCH                             | Maximum number of FACHs and PCHs mapped onto one secondary CCPCHs   | 8   |         |
| maxRL                                  | Maximum number of radio links   | 8   |         |
| maxEDCHRL                              | Maximum number of E-DCH radio links   | 4   | REL-6   |
| maxSCCPCH                              | Maximum number of secondary CCPCHs per cell   | 16  |         |
| maxDPDCH-UL                            | Maximum number of DPDCHs per cell   | 6   |         |
| maxDPCH-DLchan                         | Maximum number of channelisation codes used for DL DPCH   | 8   |         |
| maxPUSCH                               | Maximum number of PUSCHs  | (8)   |         |
| maxPDSCH                               | Maximum number of PDSCHs  | 8   |         |
| maxTS                                  | Maximum number of timeslots used in one direction (UL or DL)  | 14 (3.84 Mcps TDD and 7.68 Mcps TDD)<br>6 (1.28 Mcps TDD) | REL-4   |
| hiPUSCHidentities                      | Maximum number of PUSCH Identities  | 64  |         |
| hiPDSCHidentities                      | Maximum number of PDSCH Identities  | 64  |         |
| maxNumE-AGCH                           | Maximum number of E-AGCHs (TDD)   | 4   | REL-7   |
| maxNumE-HICH                           | Maximum number of E-HICHs (1.28 Mcps TDD)   | 4   | REL-7   |
| maxERUCCH                              | Maximum number of E-RUCCH on primary frequency (1.28Mcps TDD)   | 256   | REL-8   |
| <b>Measurement information</b>         |   |   |         |
| maxTGPS                                | Maximum number of transmission gap pattern sequences  | 6   |         |
| maxAdditionalMeas                      | Maximum number of additional measurements for a given measurement identity  | 4   |         |
| maxExcludedDetectedSet Cells           | Maximum number of cells that can be excluded from a detected set measurement  | 64  | REL-11  |
| maxNonContiguousMultiCell Combinations | Maximum number of non-contiguous multi-cell HSDPA combinations in one band  | 3   | REL-10  |
| maxMeasEvent                           | Maximum number of events that can be listed in measurement reporting criteria   | 8   |         |
| maxMeasEventOnSecULFrequency           | Maximum number of events that can be listed in measurement reporting criteria on the downlink frequency associated with secondary uplink frequency        | 8   | REL-9   |
| maxMeasParEvent                        | Maximum number of measurement parameters (e.g. thresholds) per event  | 2   |         |
| maxMeasIntervals                       | Maximum number of intervals that define the mapping function between the measurements for the cell quality Q of a cell and the representing quality value | 1   |         |
| maxCellMeas                            | Maximum number of cells to measure  | 32  |         |
| maxMeasCSGRange                        | Maximum number of ranges of cells for CSG   | 4   | REL-9   |

| Constant                                 | Explanation   | Value | Version |
|--|---|-------|---------|
|  | measurement   |       |         |
| maxSlrequest                             | Maximum number of cell request for reading System Information   | 4     | REL-9   |
| maxCellMeasOnSecULFreq                   | Maximum number of cells to measure on the downlink frequency associated with the secondary uplink frequency | 32    | REL-9   |
| maxReportedGSMCells                      | Maximum number of GSM cells to be reported  | 8     |         |
| maxReportedEUTRAFreqs                    | Maximum number of E-UTRA frequencies to report  | 4     | REL-8   |
| maxReportedEUTRACellperFreq              | Maximum number of E-UTRA cells to report per frequency  | 4     | REL-8   |
| maxFreq                                  | Maximum number of frequencies to measure  | 8     |         |
| maxFreqMeasWithoutCM                     | Maximum number of inter frequencies to measure without CM   | 2     | REL-10  |
| maxNumPrio                               | Maximum number of priorities to store   | 11    | REL-8   |
| maxPrio                                  | Maximum number of RAT or Frequency Priority levels  | 8     | REL-8   |
| maxEUTRACellPerFreq                      | Maximum number of E-UTRA cells per frequency  | 16    | REL-8   |
| maxSat                                   | Maximum number of satellites to measure   | 16    |         |
| maxGANSSSat                              | Maximum number of GANSS satellites to measure   | 64    | REL-7   |
| maxGANSS                                 | Maximum number of GANSS supported   | 8     | REL-7   |
| maxSgnType                               | Maximum number of additional signals in GANSS to measure  | 8     | REL-7   |
| maxSatClockModels                        | Maximum number of clock models in a GANSS   | 4     | REL-7   |
| maxSatAlmanacStorage                     | Maximum number of satellites for which to store GPS Almanac information                                     | 32    |         |
| HiRM                                     | Maximum number that could be set as rate matching attribute for a transport channel                         | 256   |         |
| maxDCHMeasurementOccasionPatternSequence | Maximum number of CELL_DCH measurement occasion pattern sequences   | 5     | REL-9   |
| <b>Frequency information</b>             |   |       |         |
| MaxFDDFreqList                           | Maximum number of FDD carrier frequencies to be stored in USIM  | 4     |         |
| MaxTDDFreqList                           | Maximum number of TDD carrier frequencies to be stored in USIM  | 4     |         |
| MaxFDDFreqCellList                       | Maximum number of neighbouring FDD cells to be stored in USIM   | 32    |         |
| MaxTDDFreqCellList                       | Maximum number of neighbouring TDD cells to be stored in USIM   | 32    |         |
| MaxGSMCellList                           | Maximum number of GSM cells to be stored in USIM  | 32    |         |
| <b>Other information</b>                 |   |       |         |
| MaxGERANSI                               | Maximum number of GERAN SI blocks that can be provided as part of NACC information                          | 8     | REL-5   |
| maxNumGSMFreqRanges                      | Maximum number of GSM Frequency Ranges to store   | 32    |         |
| MaxNumFDDFreqs                           | Maximum number of FDD centre frequencies to store   | 8     |         |
| MaxNumTDDFreqs                           | Maximum number of TDD centre frequencies to store   | 8     |         |
| maxNumCDMA200Freqs                       | Maximum number of CDMA2000 centre frequencies to store  | 8     |         |

| Constant                              | Explanation   | Value | Version |
|---------------------------------------|---|-------|---------|
| maxGSMTargetCells                     | Maximum number of GSM target cells  | 32    | REL-6   |
| maxNumGSMCellGroup                    | Maximum number of GSM frequency groups to store   | 16    | REL-8   |
| maxNumEUTRAFreqs                      | Maximum number of EUTRA centre frequencies to store   | 8     | REL-8   |
| maxNumEUTRAFreqs_FACH                 | Maximum number of EUTRA centre frequencies to store when in CELL_FACH                                   | 4     | REL-11  |
| maxEUTRATargetFreqs                   | Maximum number of target E-UTRA frequencies   | 8     | REL-8   |
| maxHNBNameSize                        | Maximum number of octets for the HNB Name   | 48    | REL-8   |

10.3.11 Void

# 11 Message and Information element abstract syntax (with ASN.1)

This clause contains definitions for RRC PDUs and IEs using a subset of ASN.1 as specified in [14]. PDU and IE definitions are grouped into separate ASN.1 modules.

## 11.0 General

Some messages and/or IEs may include one or more IEs with name "dummy" that are included only in the ASN.1. The UE should avoid sending information elements that are named "dummy" to UTRAN. Likewise, UTRAN should avoid sending IEs with name "dummy" to the UE. If the UE anyhow receives an information element named "dummy", it shall ignore the IE and process the rest of the message as if the IE was not included.

**NOTE:** An IE with name "dummy" concerns an information element that was (erroneously) included in a previous version of the specification and has been removed by replacing it with a dummy with same type.

The UE shall only include the "variable length extension container" when it sends a non critical extension that according to this specification shall be transferred within this container.

If the abstract syntax of an IE is defined using the ASN.1 type "BIT STRING", and this IE corresponds to a functional IE definition in tabular format, in which the significance of bits is semantically defined, the following general rule shall be applied:

The bits in the ASN.1 bit string shall represent the semantics of the functional IE definition in decreasing order of bit significance;

- with the first (or leftmost) bit in the bit string representing the most significant bit; and
- with the last (or rightmost) bit in the bit string representing the least significant bit.
