Foreword

This Technical Specification (TS) has been produced by the 3rd Generation Partnership Project (3GPP).

The contents of the present document are subject to continuing work within the TSG and may change following formal TSG approval. Should the TSG modify the contents of the present document, it will be re-released by the TSG with an identifying change of release date and an increase in version number as follows:

Version x.y.z

where:

- x the first digit:
 - 1 presented to TSG for information;
 - 2 presented to TSG for approval;
 - 3 or greater indicates TSG approved document under change control.
- y the second digit is incremented for all changes of substance, i.e. technical enhancements, corrections, updates, etc.
- z the third digit is incremented when editorial only changes have been incorporated in the document.

Introduction

The present document is part of a TS-family covering the 3rd Generation Partnership Project; Technical Specification Group Services and System Aspects; Telecommunication management, as identified below:

- 32.501: Self-Configuration of Network Elements; Concepts and Integration Reference Point (IRP) Requirements
- 32.502: Self-Configuration of Network Elements Integration Reference Point (IRP); Information Service (IS)
- 32.506: Self-Configuration of Network Elements Integration Reference Point (IRP): Solution Set (SS) definitions "**

The present document is part of a TS-family which describe the requirements and information model necessary for the Telecommunication Management (TM) of 3G systems. The TM principles and TM architecture are specified in 3GPP TS 32.101 [1] and 3GPP TS 32.102 [2].

For the purpose of Self-Configuration of Network Elements IRP, see TS 32.501 [3]

1 Scope

The present document specifies the Solution Set definitions for the IRP whose semantics are specified in Self-Configuration of Network Elements Integration Reference Point (IRP): Information Service (3GPP TS 32.502 [4]).

This Solution Set specification is related to 3GPP TS 32.502 V11.0.X.

2 References

The following documents contain provisions which, through reference in this text, constitute provisions of the present document.

- References are either specific (identified by date of publication, edition number, version number, etc.) non-specific.
- For a specific reference, subsequent revisions do not apply.
- For a non-specific reference, the latest version applies. In the case of a reference to a 3GPP document (including a GSM document), a non-specific reference implicitly refers to the latest version of that document *in the same Release as the present document*.

3 Definitions and abbreviations

3.1 Definitions

For the purposes of the present document, the terms and definitions given in 3GPP TS 32.101 [1], 3GPP TS 32.102 [2], 3GPP TS 32.150 [18] and 3GPP TS 32.501 [3] and the following apply:

IRP document version number string (or "IRPVersion"): See 3GPP TS 32.311 [15]

IRP: See 3GPP TS 32.150 [18].

IRP Agent: See 3GPP TS 32.150 [18].

IRP Manager: See 3GPP TS 32.150 [18].

Self Configuration: The process which brings a network element into service requiring minimal human operator intervention or none at all.

XML file: file containing an XML document

XML document: composed of the succession of an optional XML declaration followed by a root XML element

NOTE: See [10]; in the scope of the present document.

XML declaration: it specifies the version of XML being used

NOTE: See [10].

XML element: has a type, is identified by a name, may have a set of XML attribute specifications and is either composed of the succession of an XML start-tag followed by the XML content of the XML element followed by an XML end-tag, or composed simply of an XML empty-element tag; each XML element may contain other XML elements

NOTE: See [10].

empty XML element: having an empty XML content; an empty XML element still possibly has a set of XML attribute specifications; an empty XML element is either composed of the succession of an XML start-tag directly followed by an XML end-tag, or composed simply of an XML empty-element tag

NOTE: See [10].

XML content (of an XML element): empty if the XML element is simply composed of an XML empty-element tag; otherwise the part, possibly empty, of the XML element between its XML start-tag and its XML end-tag

XML start-tag: the beginning of a non-empty XML element is marked by an XML start-tag containing the name and the set of XML attribute specifications of the XML element

NOTE: See [10].

XML end-tag: the end of a non-empty XML element is marked by an XML end-tag containing the name of the XML element

NOTE: See [10].

XML empty-element tag: composed simply of an empty-element tag containing the name and the set of XML attribute specifications of the XML element.

NOTE: See [10].

XML attribute specification: has a name and a value

NOTE: See [10].

DTD: defines structure and content constraints to be respected by an XML document to be valid with regard to this DTD

NOTE: See [10].

XML schema: more powerful than a DTD, an XML schema defines structure and content constraints to be respected by an XML document to conform with this XML schema; through the use of XML namespaces several XML schemas can be used together by a single XML document; an XML schema is itself also an XML document that shall conform with the XML schema for XML schemas

NOTE: See [11], [12] and [13].

XML namespace: enables qualifying element and attribute names used in XML documents by associating them with namespaces identified by different XML schemas

NOTE: See [14], in the scope of the present document.

XML complex type: defined in an XML schema; cannot be directly used in an XML document; can be the concrete type or the derivation base type for an XML element type or for another XML complex type; ultimately defines constraints for an XML element on its XML attribute specifications and/or its XML content

NOTE: See [11], [12] and [13].

XML element type: declared by an XML schema; can be directly used in an XML document; as the concrete type of an XML element, directly or indirectly defines constraints on its XML attribute specifications and/or its XML content; can also be the concrete type or the derivation base type for another XML element type

NOTE: See [11], [12] and [13].

3.2 Abbreviations

For the purposes of the present document, the following abbreviations apply:

IS	Information Service
SC	Self Configuration
SS	Solution Set
WSDL	Web Service Description Language
XML	eXtensible Markup Language

4 Solution Set definitions

This specification defines the following 3GPP Self-Configuration of Network Elements IRP Solution Set definitions:

Annex A provides the CORBA Solution Set.

Annex B provides the XML Definitions.

Annex C provides the SOAP Solution Set.

Annex A (normative): CORBA Solution Set

This annex contains the CORBA Solution Set for the IRP whose semantics is specified in Self-Configuration of Network Elements IRP: Information Service (3GPP TS 32.502 [4]).

A.1 Architectural features

The overall architectural feature of Self-Configuration of Network Elements IRP is specified in 3GPP TS 32.502 [4].

A.1.1 Syntax for Distinguished Names

The format of a Distinguished Name is defined in 3GPP TS 32.300 [24].

The version of this IRP is represented as a string (see also clause 3 for versions).

A.1.2 Notification Services

Notifications are sent according to the Notification IRP: CORBA SS (see 3GPP TS 32.306 [19]).

The contents of the SCIRP notifications are defined in the present document.

A.1.3 Push and Pull Style

OMG Notification Service defines two styles of interaction. One is called push style. In this style, IRPAgent pushes notifications to IRPManager as soon as they are available. The other is called pull style. In this style, IRPAgent keeps the notifications till IRPManager requests for them.

This CORBA SS specifies that support of Push style is Mandatory (M) and that support of Pull style is Optional (O).

A.1.4 Support multiple notifications in one push operation

For efficiency reasons, IRPAgent may send multiple notifications using one single push operation. To pack multiple notifications into one push operation, IRPAgent may wait and not invoke the push operation as soon as notifications are available. To avoid IRPAgent to wait for an extended period of time that is objectionable to IRPManager, IRPAgent shall implement an IRPAgent wide timer configurable by administrator. On expiration of this timer, IRPAgent shall invoke push if there is at least one notification to be conveyed to IRPManager. This timer is re-started after each push invocation.

A.2 Mapping

A.2.1 Operation and Notification mapping

Software Management IRP: IS 3GPP TS (see 3GPP TS 32.502 [4]) defines semantics of operations and notifications visible across the Ift-N. Table A.2.1 indicates mapping of these operations and notifications to their equivalents defined in this SS.

Table A.2.1: Mapping from IS Notification/Operation to SS equivalents

IS Operation/notification Self-Configuration IRP: IS 3GPP TS 32.502[4]	SS Method	Qualifier
listScManagementCapabilities	listScManagementCapabilities	M
listScManagementProfiles	listScManagementProfiles	M
createScManagementProfile	createScManagementProfile	M
deleteScManagementProfile	deleteScManagementProfile	M
listScProcesses	listScProcesses	M
resumeScProcess	resumeScProcess	M
swFallback	swFallback	M
terminateScManagementProcess	terminateScManagementProcess	M
changeScManagementProfile	changeScManagementProfile	O
notifyScManagementProfileCreation	notifyScManagementProfileCreation	M
notifyScManagementProfileDeletion	notifyScManagementProfileDeletion	M
notifyScManagementProcessCreation	notifyScManagementProcessCreation	M
notifyScManagementProcessStage	notifyScManagementProcessStage	M
notifyScManagementProcessDeletion	notifyScManagementProcessDeletion	M
notifyNewScManagementCapabilitiesAvailability	notifyNewScManagementCapabilitiesAvailability	O
notifyScManagementProfileChange	notifyScManagementProfileChange	O

A.2.2 Operation parameter mapping

Reference 3GPP TS 32.302 defines semantics of parameters carried in operations across the Ift-N. The following set of tables indicate the mapping of these parameters, as per operation, to their equivalents defined in this SS.

Table A.2.2-1: Mapping from IS listScManagementCapabilities parameters to SS equivalents

IS Operation parameter	SS Method parameter	Qualifier
result	Exceptions: SelfConfIRPConstDefs::ListScManagementCapabilities, GenericIRPManagementSystem::ParameterNotSupported, GenericIRPManagementSystem::InvalidParameter, GenericIRPManagementSystem::ValueNotSupported, GenericIRPManagementSystem::OperationNotSupported	M

For all other parameters see TS 32.536 [9] mapping from IS **listSwMcapabilities** parameters to SS equivalents

Table A.2.2-2: Mapping from IS listScManagementProfiles parameters to SS equivalents

IS Operation parameter	SS Method parameter	Qualifier
result	Exceptions: SelfConfIRPConstDefs::ListScManagementProfile, GenericIRPManagementSystem::ParameterNotSupported, GenericIRPManagementSystem::InvalidParameter, GenericIRPManagementSystem::ValueNotSupported, GenericIRPManagementSystem::OperationNotSupported	M

For all other parameters see TS 32.536 [9] mapping from IS **listSwMprofiles** parameters to SS equivalents

Table A.2.2-3: Mapping from IS `createScManagementProfile` parameters to SS equivalents

IS Operation parameter	SS Method parameter	Qualifier
result	Exceptions: SelfConfIRPConstDefs::CreateScManagementProfile, GenericIRPManagementSystem::ParameterNotSupported, GenericIRPManagementSystem::InvalidParameter, GenericIRPManagementSystem::ValueNotSupported, GenericIRPManagementSystem::OperationNotSupported	M

For all other parameters see TS 32.536 [9] mapping from IS `createSwMProfile` parameters to SS equivalents

Table A.2.2-4: Mapping from IS `deleteScManagementProfile` parameters to SS equivalents

IS Operation parameter	SS Method parameter	Qualifier
result	Exceptions: SelfConfIRPConstDefs::DeleteScManagementProfile, GenericIRPManagementSystem::ParameterNotSupported, GenericIRPManagementSystem::InvalidParameter, GenericIRPManagementSystem::ValueNotSupported, GenericIRPManagementSystem::OperationNotSupported	M

For all other parameters see TS 32.536 [9] mapping from IS `deleteSwMProfile` parameters to SS equivalents

Table A.2.2-5: Mapping from IS `listScManagementProcesses` parameters to SS equivalents

IS Operation parameter	SS Method parameter	Qualifier
Result	Exceptions: SelfConfIRPConstDefs::ListScManagementProcesses, GenericIRPManagementSystem::ParameterNotSupported, GenericIRPManagementSystem::InvalidParameter, GenericIRPManagementSystem::ValueNotSupported, GenericIRPManagementSystem::OperationNotSupported	M

For all other parameters see TS 32.536 [9] mapping from IS `listSwMProcesses` parameters to SS equivalents

Table A.2.2-6: Mapping from IS `resumeScManagementProcess` parameters to SS equivalents

IS Operation parameter	SS Method parameter	Qualifier
Result	Exceptions: SelfConfIRPConstDefs::ResumeScManagementProcess, GenericIRPManagementSystem::ParameterNotSupported, GenericIRPManagementSystem::InvalidParameter, GenericIRPManagementSystem::ValueNotSupported, GenericIRPManagementSystem::OperationNotSupported	M

For all other parameters see TS 32.536 [9] mapping from IS `resumeSwMProcess` parameters to SS equivalents

Table A.2.2-7: Mapping from IS `swFallback` parameters to SS equivalents

IS Operation parameter	SS Method parameter	Qualifier
Result	Exceptions: SelfConfIRPConstDefs::SwFallback, GenericIRPManagementSystem::ParameterNotSupported, GenericIRPManagementSystem::InvalidParameter, GenericIRPManagementSystem::ValueNotSupported, GenericIRPManagementSystem::OperationNotSupported	M

For all other parameters see TS 32.536 [9] mapping from IS `swFallback` parameters to SS equivalents

Table A.2.2-8: Mapping from IS `terminateScManagementProcess` parameters to SS equivalents

IS Operation parameter	SS Method parameter	Qualifier
Result	Exceptions: SelfConfIRPConstDefs::TerminateScManagementProcess, GenericIRPManagementSystem::ParameterNotSupported, GenericIRPManagementSystem::InvalidParameter, GenericIRPManagementSystem::ValueNotSupported, GenericIRPManagementSystem::OperationNotSupported	M

For all other parameters see TS 32.536 [9] mapping from IS `terminateSwMProcess` parameters to SS equivalents

Table A.2.2-9: Mapping from IS `changeScManagementProfile` parameters to SS equivalents

IS Operation parameter	SS Method parameter	Qualifier
Result	Exceptions: SelfConfIRPConstDefs::CreateScManagementProfile, GenericIRPManagementSystem::ParameterNotSupported, GenericIRPManagementSystem::InvalidParameter, GenericIRPManagementSystem::ValueNotSupported, GenericIRPManagementSystem::OperationNotSupported	M

For all other parameters see TS 32.536 [9] mapping from IS `changeSwMProfile` parameters to SS equivalents

A.2.3 Notification parameter mapping

Reference 3GPP TS 32.502 [4] defines semantics of parameters carried in notifications. The following tables indicate the mapping of these parameters to their SS equivalents."

The following tables indicate the mapping of these parameters to their OMG CORBA Structured Event (defined in OMG Notification Service [6]) equivalents. The composition of OMG Structured Event, as defined in the OMG Notification Service [6], is:

```

Header
  Fixed Header
    domain_name
    type_name
    event_name
  Variable Header
Body
  filterable_body_fields
  remaining_body

```

The following tables list all OMG Structured Event attributes in the second column. The first column identifies the Software Management IRP: IS [8] defined notification parameters.

Table A.2.3.1: Mapping for notifyScManagementProfileCreation

See TS 32.536 [9] mapping from IS **notifySwMProfileCreation**

Table A.2.3.2: Mapping for notifyScManagementProfileDeletion

See TS 32.536 [9] mapping from IS **notifySwMProfileDeletion**

Table A.2.3.3: Mapping for notifyScProcessCreation

See TS 32.536 [9] mapping from IS **notifySwMProcessCreation**

Table A.2.3.4: Mapping for notifyScProcessStage

See TS 32.536 [9] mapping from IS **notifySwMProcessStage**

Table A.2.3.5: Mapping for notifyScProcessDeletion

See TS 32.536 [9] mapping from IS **notifySwMProcessDeletion**

Table A.2.3.6: Mapping for notifyNewScManagementCapabilityAvailability

IS Parameters	<SS> Parameters	Qualifier	Comment
id	SwMIRPCConstDefs::Id	M	
nEInformation	SwMIRPCConstDefs::NEInformation	M	
stepsAndOfferedStopPointList	SwMIRPCConstDefs::StepsAndOfferedStopPointList	M	
offeredFinalAdministrativeStateInformation	SwMIRPCConstDefs::OfferedFinalAdministrativeStateInformation	M	
swVersionToBeInstalledOfferList	SwMIRPCConstDefs::SwVersionToBeInstalledOfferListConditional	C	

Table A.2.3.7: Mapping for notifyScManagementProfileChange

See TS 32.536 [9] mapping from IS **notifySwMProfileChange**

A.3 Solution Set definitions

A.3.1 IDL definition structure

Clause A.3.2 defines the constants and types used by the SC Management IRP.

Clause A.3.3 defines the operations which are performed by the SC Management IRP agent.

Clause A.3.4 defines the notifications which are emitted by the SC Management IRP agent.

A.3.2 IDL specification (file name "SelfConfIRPConstDefs.idl")

```

// File: SelfConfIRPConstDefs.idl
#ifndef _SELF_CONF_IRP_CONST_DEFS_IDL_
#define _SELF_CONF_IRP_CONST_DEFS_IDL_

Annex B (normative): XML definitions

This annex contains the XML Definitions for the SC Management IRP for the IRP whose semantics is specified in Trace Management IRP: Information Service (3GPP TS 32.502 [4]).

This XML Definitions specification defines the XML syntax of the SC Management IRP XML Data File.

B.1 Architectural Features

The overall architectural feature of SC Management IRP is specified in 3G TS 32.502 [4]. This clause specifies features that are specific to the XML definitions.

B.1.1 Syntax for Distinguished Names

The syntax of a Distinguished Name is defined in 3GPP TS 32.300 [24].

B.1.2 Notification Services

This annex defines the XML syntax of SC Management IRP notifications that is to be used for the SC Management IRP SOAP Solution Set and in conjunction with Notification Log IRP XML Definitions for Notification Log IRP XML Data File and the NL IRP XML Notification Format.

B.1.3 IOC Definitions

This annex defines the XML syntax for the IOC definitions of the SC Management IRP IS [4], which are used by the XML definitions for the SC Management IRP notifications and the SC Management IRP IS operations.

B.2 Mapping

Not present in the current version of this specification.

B.3 Solution Set definitions

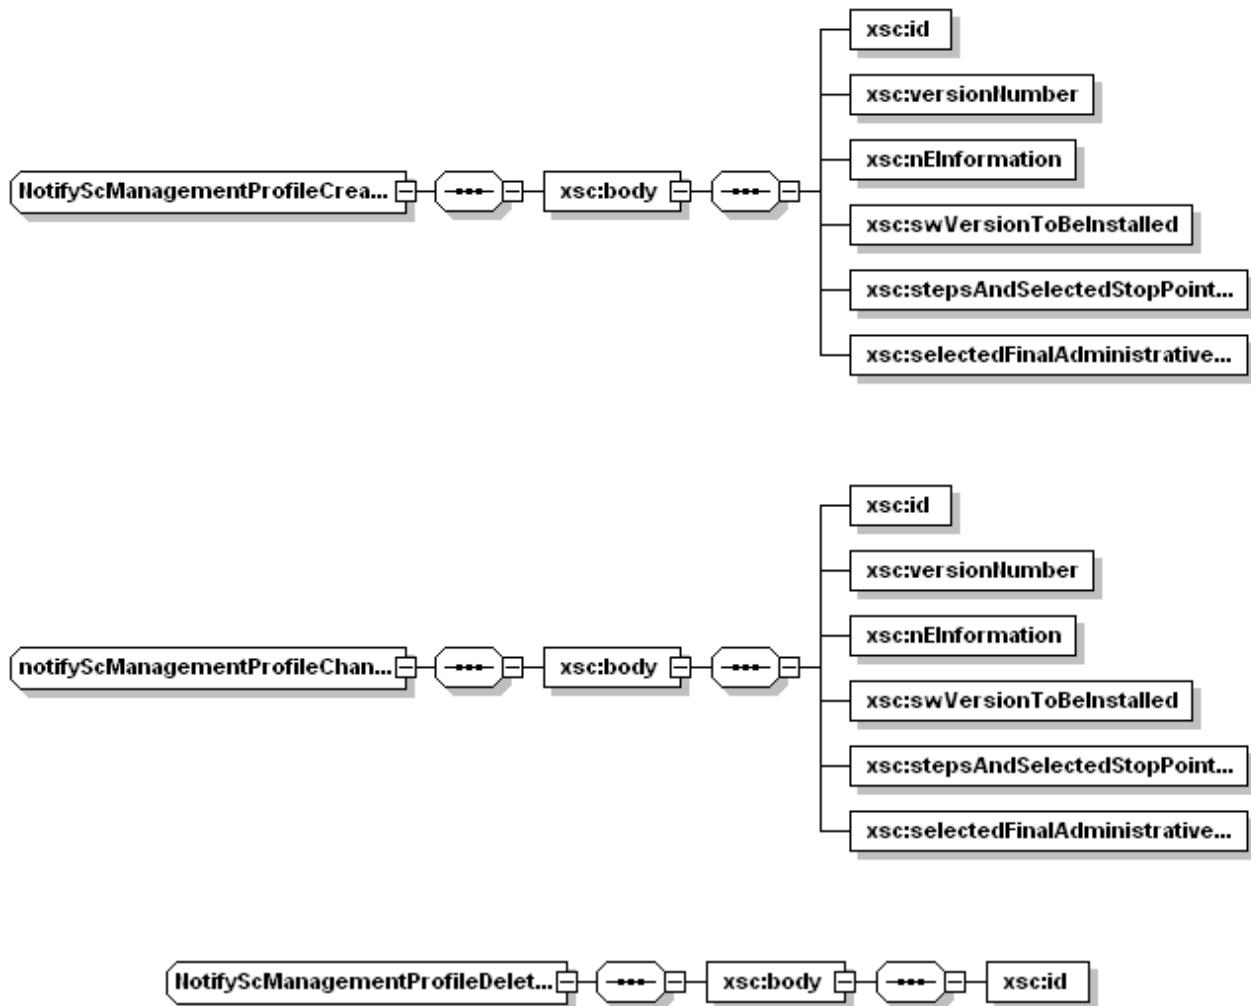

B.3.1 XML definition structure

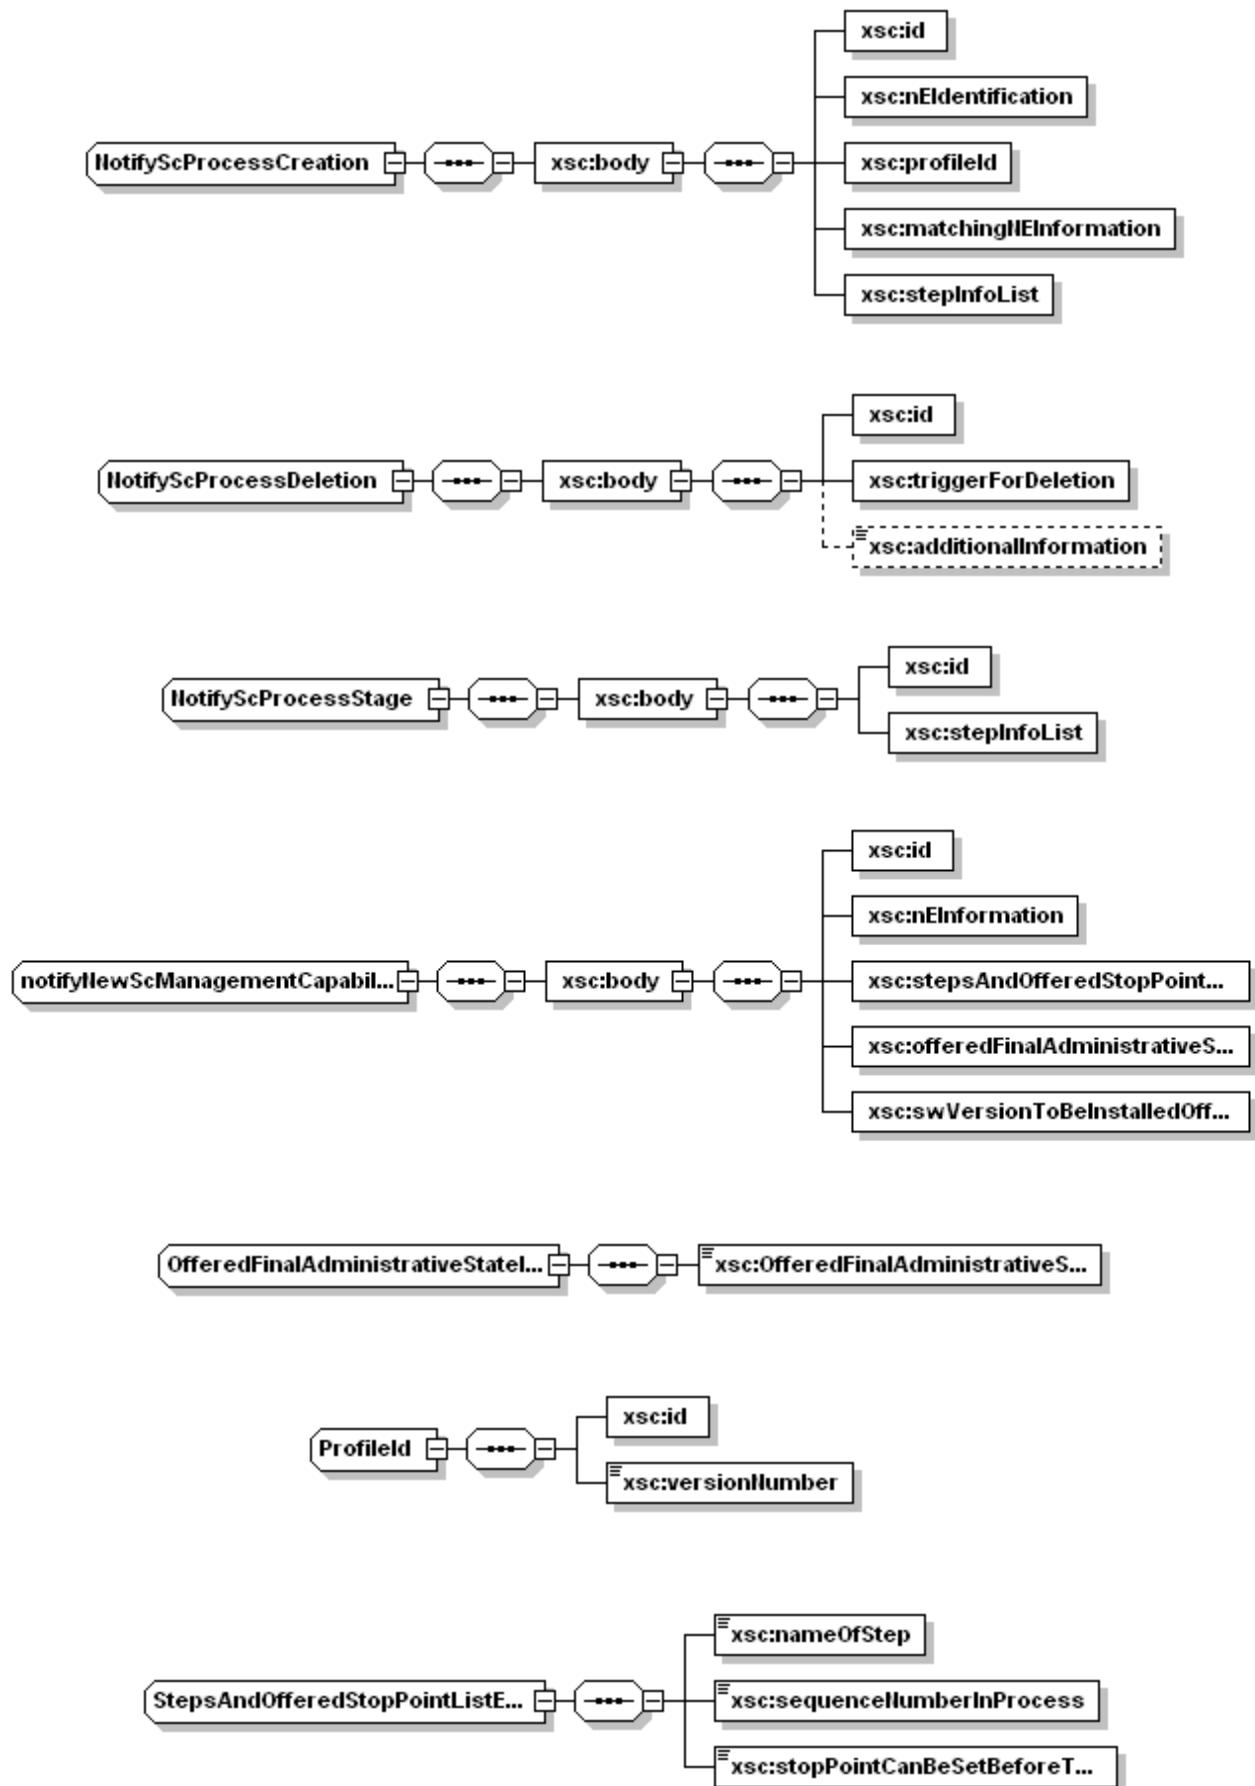

Clause B.3.2 provides a graphical representation of the XML elements.

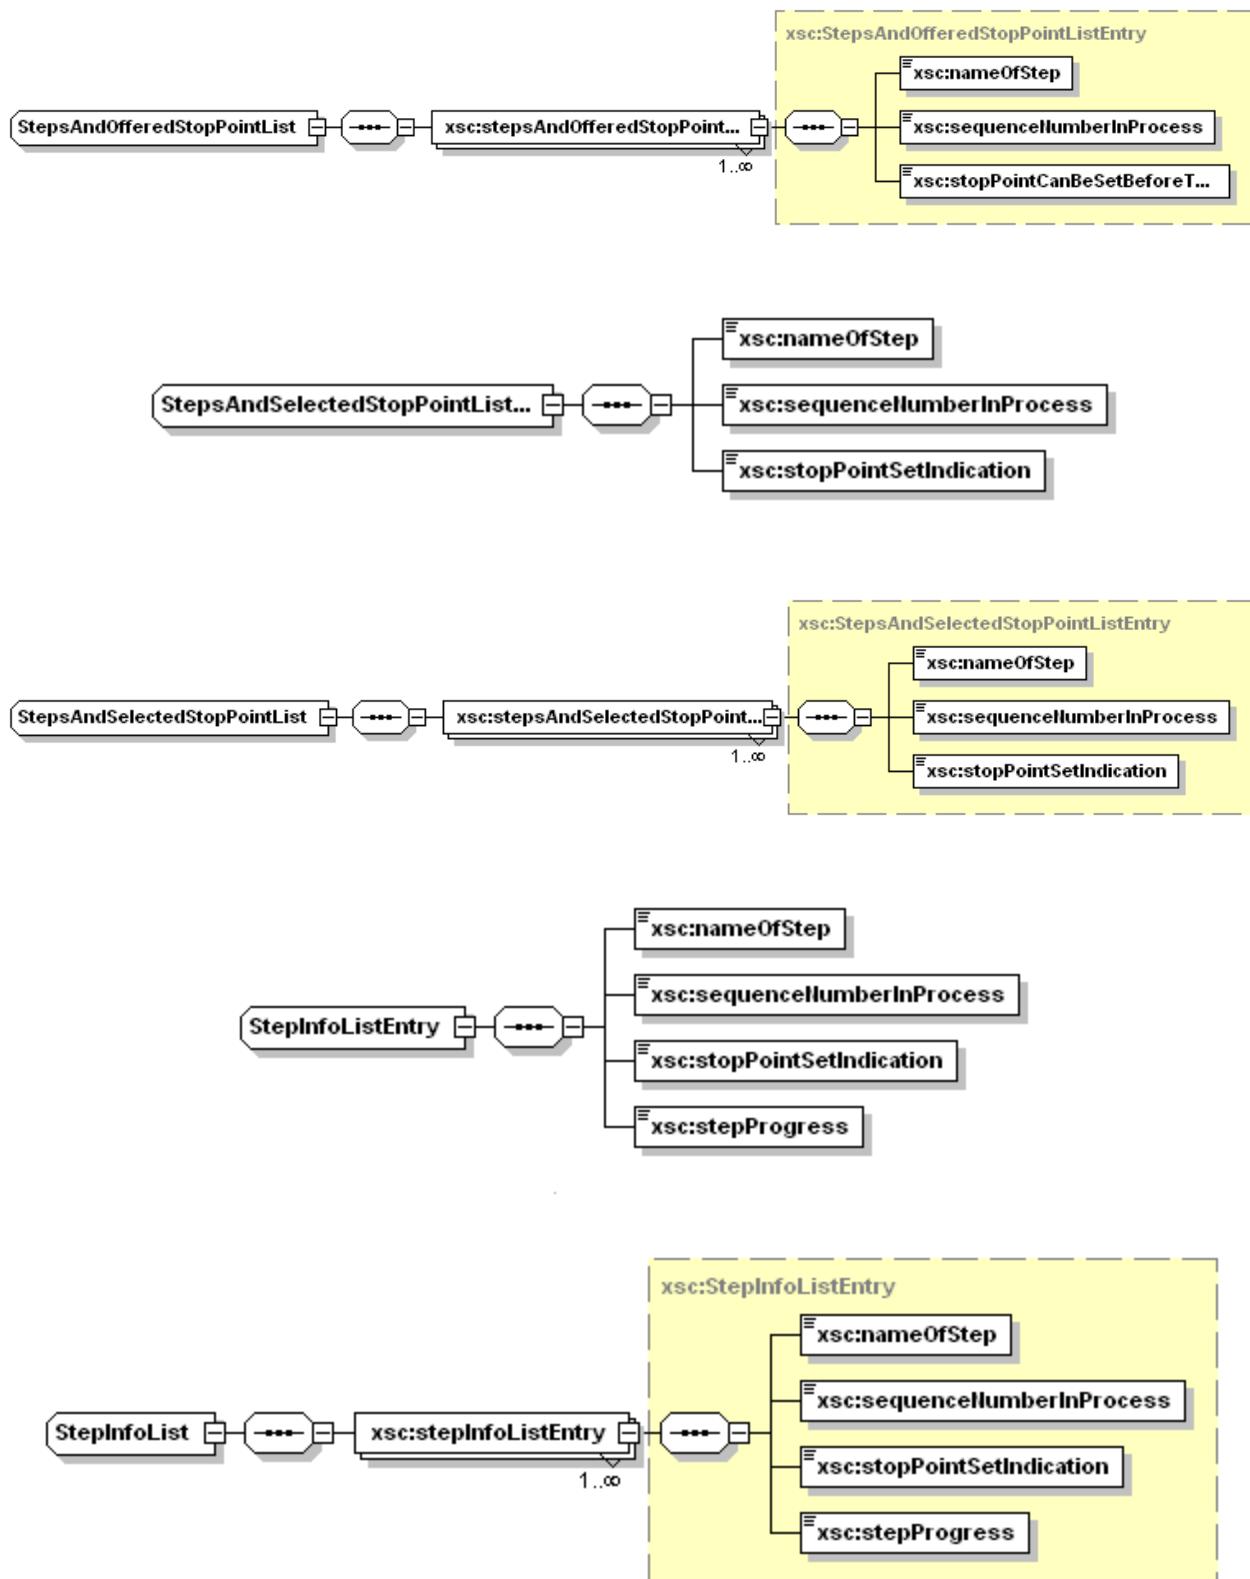

Clause B.3.3 provides XML definitions of SC Management IRP notifications as defined in [4]. These definitions are to be used for the Trace Management IRP SOAP Solution Set.

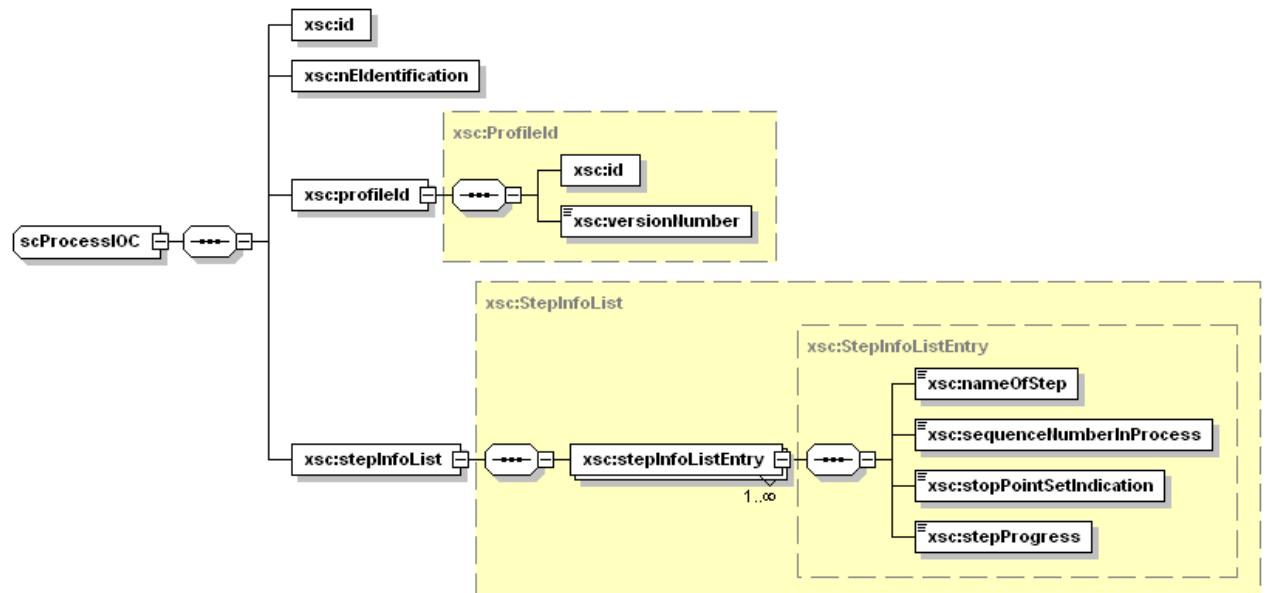

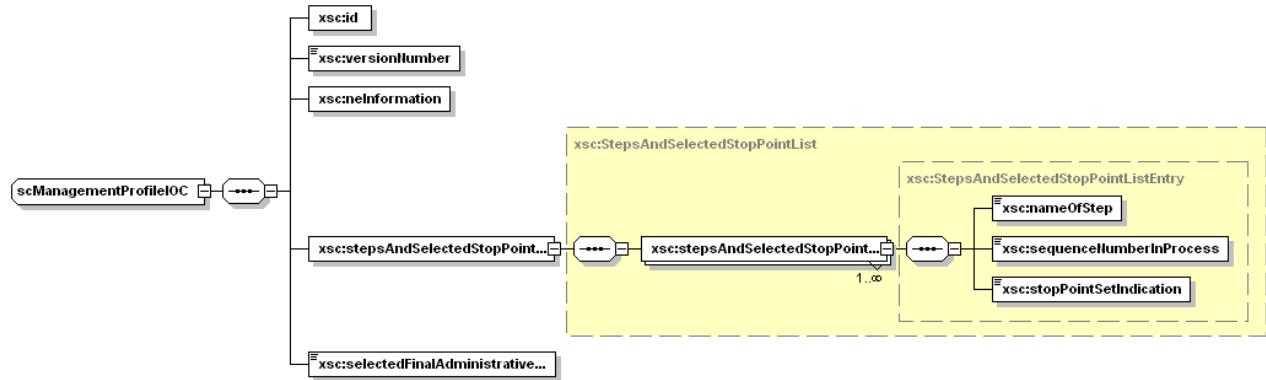

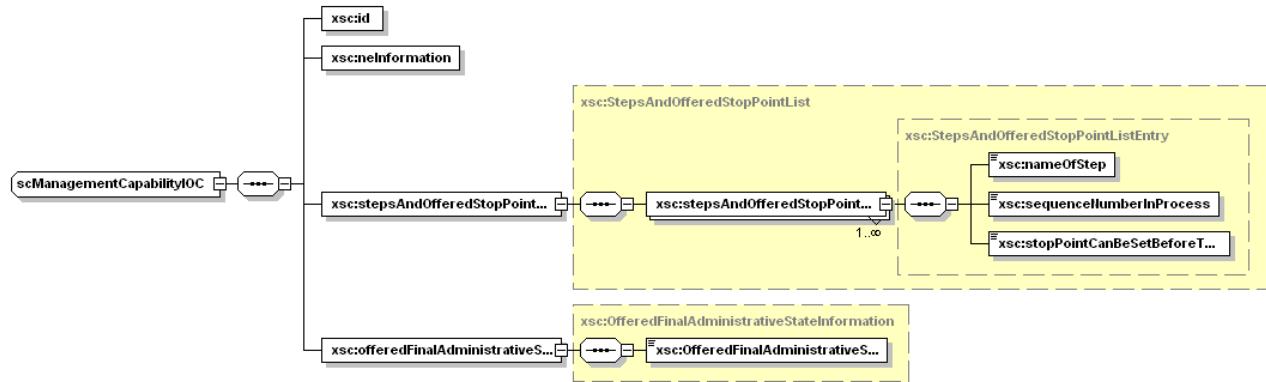

Clause B.3.4 provides XML definitions of SC Management IOC as defined in [4].

B.3.2 Graphical Representation

B.3.3 XML Schema “scIRPNotif.xsd”

Annex C (normative): SOAP Solution Set

This annex specifies the SOAP Solution Set for the IRP whose semantics are specified in Self-Configuration of Network Elements IRP: Information Service (3GPP TS 32.502 [4]).

C.1 Architectural features

The overall architectural feature of the Self-Configuration of Network Elements IRP is specified in 3GPP TS 32.502 [4]. This clause specifies features that are specific to the SOAP solution set.

C.1.1 Syntax for Distinguished Names

The syntax of a Distinguished Name is defined in 3GPP TS 32.300 [24].

C.1.2 Notification Services

The Self-Configuration of Network Elements IRP SOAP SS uses the Notification IRP SOAP SS of 3GPP TS 32.306[19].

C.1.3 Supported W3C specifications

The SOAP 1.1 specification [20] and WSDL 1.1 specification [22] are supported.

The SOAP 1.2 specification [23] is supported optionally.

This specification uses "document" style in WSDL file.

This specification uses "literal" encoding style in WSDL file.

The filter language used in the SS is the XPath Language (see W3C XPath 1.0 specification [21]). IRPAgents may throw a FilterComplexityLimit fault when a given filter is too complex.

Relevant definitions are imported from the Self-Configuration of Network Elements 22 XML definitions of Annex B

C.1.4 Prefixes and namespaces

This specification uses a number of namespace prefixes throughout that are listed in Table C.1.4.

Table C.1.4: Prefixes and Namespaces used in this specification

PREFIX	NAMESPACE
(no prefix)	http://schemas.xmlsoap.org/wsdl/
soap	http://schemas.xmlsoap.org/wsdl/soap/
SclRPSys	http://www.3gpp.org/ftp/specs/archive/32_series/32.506#SclRPSys
SclRPData	http://www.3gpp.org/ftp/specs/archive/32_series/32.506#SclRPData
xsc	http://www.3gpp.org/ftp/specs/archive/32_series/32.506#sclRPIOCs
genericIRPSys	http://www.3gpp.org/ftp/specs/archive/32_series/32.316#GenericIRPSys
ntfIRPNtfSys	http://www.3gpp.org/ftp/specs/archive/32_series/32.306#NotificationIRPNtfSys

C.2 Mapping

C.2.1 Operation and Notification mapping

The Self-Configuration of Network Elements IRP IS (3GPP TS 32.502 [4]) defines the operations and their semantics.

Table C.2.1 maps the operations defined in the Self-Configuration of Network Elements IRP IS to their equivalent port type and binding operations in this Solution Set (SS).

Table C.2.1 also maps the notifications of the Self-Configuration of Network Elements IRP IS, as well as inherited operations.

Table C.2.1 also qualifies if an operation is Mandatory (M) or Optional (O).

Table C.2.1: Mapping from IS Operation to SS Equivalents

IS Operation in 3GPP TS 32.502 [4]	SS: Operation for WSDL port type and WSDL binding	SS: Port of SCIRPSERVICE	Qualifier
listScManagementCapabilities	listScManagementCapabilities (note 1)	SCIRPOperation1	M
listScManagementProfiles	listScManagementProfiles (note 1)	SCIRPOperation1	M
createScManagementProfile	createScManagementProfile (note1)	SCIRPOperation1	M
deleteScManagementProfile	deleteScManagementProfile (note1)	SCIRPOperation1	M
listScProcesses	listScProcesses (note1)	SCIRPOperation1	M
resumeScProcess	resumeScProcess (note1)	SCIRPOperation1	M
terminateScProcess	terminateScProcess (note1)	SCIRPOperation1	M
changeScManagementProfile	changeScManagementProfile (note1)	SCIRPOperation1	O
notifyScManagementProfileCreation	notify (note 2)	NotificationIRPNtfPort	M
notifyScManagementProfileDeletion	notify (note 2)	NotificationIRPNtfPort	M
notifyScProcessCreation	notify (note 2)	NotificationIRPNtfPort	M
notifyScProcessStage	notify (note 2)	NotificationIRPNtfPort	M
notifyScProcessDeletion	notify (note 2)	NotificationIRPNtfPort	M
notifyNewScManagementCapabilityAvailability	notify (note 2)	NotificationIRPNtfPort	M
notifyScManagementProfileChange	notify (note 2)	NotificationIRPNtfPort	O
getIRPVersion (note 3)	See TS 32.316 [17]	GenericIRPPort	M
getOperationProfile (note 3)	See TS 32.316 [17]	GenericIRPPort	O
getNotificationProfile (note 3)	See TS 32.316 [17]	GenericIRPPort	O
NOTE 1: The operation is under the port type SCIRPSYSTEM:SCIRPPortType and under the binding SCIRPSYSTEM:SCIRPBinding.			
NOTE 2: The IS equivalent maps to an XML definition specified in Annex B, and this being an input parameter to the operation notify under the port type ntfIRPNtfSystem:NotificationIRPNtf and under the binding ntfIRPNtfSystem:NotificationIRPNtf of 3GPP TS 32.306 [19]. This binding is linked to a port of the SCIRPSERVICE as indicated in the table above..			
NOTE 3: The IS operation is inherited from the ManagedGenericIRP IOC specified in 3GPP TS 32.312 [16]. This inheritance is by the SelfConfigurationIRP IOC of 3GPP TS 32.502 [4] inheriting from the ManagedGenericIRP IOC. The corresponding binding is linked to a port of the SCIRPSERVICE as indicated in the table above.			

C.2.2 Operation parameter mapping

The SCIRP IS (3GPP TS 32.502 [4]) defines semantics of parameters carried in the operations. The tables below show the mapping of these parameters, as per operation, to their equivalents defined in this SS.

C.2.2.1 Operation listScManagementCapabilities

C.2.2.1.1 Input parameters

Table C.2.2.1.1: Mapping from IS listScManagementCapabilities input parameters to SS equivalents

IS Operation parameter	SS WSDL type sub-element used in corresponding input message under corresponding port type operation as indicated in Table C.2.1	Qualifier
nEInformation	nEInformation	M

C.2.2.1.2 Output parameters

Table C.2.2.1.2: Mapping from IS listScManagementCapabilities output parameters to SS equivalents

IS Operation parameter	SS WSDL type sub-element used in corresponding input message under corresponding port type operation as indicated in Table C.2.1	Qualifier
capabilitiesList	capabilitiesList	M
Result	Result	M

C.2.2.1.3 Fault definition

Table C.2.2.1.3: Mapping from IS listScManagementCapabilities exceptions to SS equivalents

Assertion name	SS WSDL type sub-element used in corresponding input message under corresponding port type operation as indicated in Table C.2.1	Qualifier
operation failed	operation failed	M

C.2.2.2 Operation listScManagementProfiles

C.2.2.2.1 Input parameters

Table C.2.2.2.1: Mapping from IS listScManagementProfiles input parameters to SS equivalents

IS Operation parameter	SS WSDL type sub-element used in corresponding input message under corresponding port type operation as indicated in Table C.2.1	Qualifier
nEInformation	nEInformation	M

C.2.2.2.2 Output parameters

Table C.2.2.2.2: Mapping from IS listScManagementProfiles output parameters to SS equivalents

IS Operation parameter	SS WSDL type sub-element used in corresponding input message under corresponding port type operation as indicated in Table C.2.1	Qualifier
ScManagementProfileList	ScManagementProfileList	M
result	result	M

C.2.2.3 Operation createScManagementProfile

C.2.2.3.1 Input parameters

Table C.2.2.3.1: Mapping from IS createScManagementProfile input parameters to SS equivalents

IS Operation parameter	SS WSDL type sub-element used in corresponding input message under corresponding port type operation as indicated in Table C.2.1	Qualifier
id	id	O
nEInformation	nEInformation	M
swVersionToBeInstalled	swVersionToBeInstalled	M
stepsAndSelectedStopPointList	stepsAndSelectedStopPointList	M
selectedFinalAdministrativeState	selectedFinalAdministrativeState	M

C.2.2.3.2 Output parameters

Table C.2.2.3.2: Mapping from IS createScManagementProfile output parameters to SS equivalents

IS Operation parameter	SS WSDL type sub-element used in corresponding input message under corresponding port type operation as indicated in Table C.2.1	Qualifier
id	id	CM
result	result	M

C.2.2.4 Operation deleteScManagementProfile

C.2.2.4.1 Input parameters

Table C.2.2.4.1: Mapping from IS deleteScManagementProfile input parameters to SS equivalents

IS Operation parameter	SS WSDL type sub-element used in corresponding input message under corresponding port type operation as indicated in Table C.2.1	Qualifier
id	id	M

C.2.2.4.2 Output parameters

Table C.2.2.4.2: Mapping from IS deleteScManagementProfile output parameters to SS equivalents

IS Operation parameter	SS WSDL type sub-element used in corresponding input message under corresponding port type operation as indicated in Table C.2.1	Qualifier
result	result	M

C.2.2.5 Operation listScProcesses

C.2.2.5.1 Input parameters

Table C.2.2.5.1: Mapping from IS listScProcesses input parameters to SS equivalents

IS Operation parameter	SS WSDL type sub-element used in corresponding input message under corresponding port type operation as indicated in Table C.2.1	Qualifier
nEIdentification	nEIdentification	O

C.2.2.5.2 Output parameters

Table C.2.2.5.2: Mapping from IS listScProcesses output parameters to SS equivalents

IS Operation parameter	SS WSDL type sub-element used in corresponding input message under corresponding port type operation as indicated in Table C.2.1	Qualifier
ScManagementprocessList	ScManagementprocessList	M
result	result	M

C.2.2.6 Operation resumeScProcess

C.2.2.6.1 Input parameters

Table C.2.2.6.1: Mapping from IS resumeScProcess input parameters to SS equivalents

IS Operation parameter	SS WSDL type sub-element used in corresponding input message under corresponding port type operation as indicated in Table C.2.1	Qualifier
id	id	M
startStepName	startStepName	M

C.2.2.6.2 Output parameters

Table C.2.2.6.2: Mapping from IS resumeScProcess output parameters to SS equivalents

IS Operation parameter	SS WSDL type sub-element used in corresponding input message under corresponding port type operation as indicated in Table C.2.1	Qualifier
result	result	M

C.2.2.7 Operation terminateSctProcess

C.2.2.7.1 Input parameters

Table C.2.2.7.1: Mapping from IS terminateSctProcess input parameters to SS equivalents

IS Operation parameter	SS WSDL type sub-element used in corresponding input message under corresponding port type operation as indicated in Table C.2.1	Qualifier
id	id	M

C.2.2.7.2 Output parameters

Table C.2.2.7.2: Mapping from IS terminateSctProcess output parameters to SS equivalents

IS Operation parameter	SS WSDL type sub-element used in corresponding input message under corresponding port type operation as indicated in Table C.2.1	Qualifier
result	result	M

C.2.2.8 Operation changeScManagementProfile

C.2.2.8.1 Input parameters

Table C.2.2.8.1: Mapping from IS changeScManagementProfile input parameters to SS equivalents

IS Operation parameter	SS WSDL type sub-element used in corresponding input message under corresponding port type operation as indicated in Table C.2.1	Qualifier
id	id	M
nEInformation	nEInformation	M
swVersionToBeInstalled	swVersionToBeInstalled	M
stepsAndSelectedStopPointList	stepsAndSelectedStopPointList	M
selectedFinalAdministrativeState	selectedFinalAdministrativeState	M

C.2.2.8.2 Output parameters

Table C.2.2.8.2: Mapping from IS changeScManagementProfile input parameters to SS equivalents

IS Operation parameter	SS WSDL type sub-element used in corresponding input message under corresponding port type operation as indicated in Table C.2.1	Qualifier
result	result	M
versionNumber	versionNumber	M
conflictingProfileId	conflictingProfileId	C *)

C.3 Solution Set definitions

C.3.1 WSDL definition structure

Clause C.3.2 provides a graphical representation of the Self-Configuration of Network Elements IRP service.

Clause C.3.3 defines the services which are supported by the Self-Configuration of Network Elements IRP agent.

C.3.2 Graphical Representation

The WSDL structure is depicted in Figure C.3.2 below, depicting port type, binding and service. The port type contains port type operations, which again contain input, output and fault messages. The binding contains binding operations, which have the same name as the port type operations. The binding connects to a port inside the service.

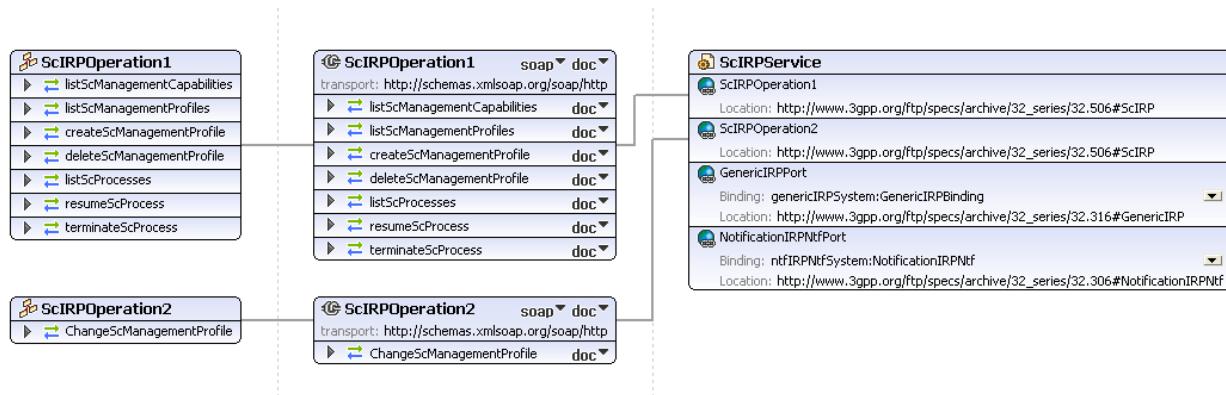

Figure C.3.2: Self-Configuration of Network Elements IRP SOAP Solution Set WSDL structure

C.3.3 WSDL specification “ScIRPSystem.wsdl”
