

# 3GPP TS 45.015 V11.0.0 (2012-09)

---

*Technical Specification*

**3rd Generation Partnership Project;  
Technical Specification Group GSM/EDGE Radio Access  
Network;  
Release independent  
Downlink Advanced Receiver Performance (DARF);  
Implementation guidelines  
(Release 11)**

The present document has been developed within the 3<sup>rd</sup> Generation Partnership Project (3GPP™) and may be further elaborated for the purposes of 3GPP.

The present document has not been subject to any approval process by the 3GPP Organizational Partners and shall not be implemented. This Specification is provided for future development work within 3GPP only. The Organizational Partners accept no liability for any use of this Specification. Specifications and reports for implementation of the 3GPP™ system should be obtained via the 3GPP Organizational Partners' Publications Offices.

# Foreword

This Technical Specification has been produced by the 3<sup>rd</sup> Generation Partnership Project (3GPP).

The contents of the present document are subject to continuing work within the TSG and may change following formal TSG approval. Should the TSG modify the contents of the present document, it will be re-released by the TSG with an identifying change of release date and an increase in version number as follows:

Version x.y.z

where:

- x the first digit:
  - 1 presented to TSG for information;
  - 2 presented to TSG for approval;
  - 3 or greater indicates TSG approved document under change control.
- y the second digit is incremented for all changes of substance, i.e. technical enhancements, corrections, updates, etc.
- z the third digit is incremented when editorial only changes have been incorporated in the document.

---

# 1 Scope

The present document specifies requirements on MSs supporting Downlink Advanced Receiver Performance (DARP) that are independent of release. TSG GERAN has agreed that the standardisation of DARP be independent of a release. However, in order to implement an MS that conforms to a particular release but supports DARP, which is specified in a later release, it is necessary to specify some extra requirements.

DARP - phase II is contained in the Release 7 specifications. In order to implement an MS conforming to Release 5 but supporting DARP – phase II, it is necessary for the MS to additionally conform to some parts of the Release 7 specifications, such as the radio frequency requirements for DARP and some signalling extensions relating to the MS Classmark and radio access capabilities.

---

# 2 References

The following documents contain provisions which, through reference in this text, constitute provisions of the present document.

- References are either specific (identified by date of publication, edition number, version number, etc.) or non-specific.
- For a specific reference, subsequent revisions do not apply.
- For a non-specific reference, the latest version applies. In the case of a reference to a 3GPP document (including a GSM document), a non-specific reference implicitly refers to the latest version of that document *in the same Release as the present document*.

- [1] (void)
- [2] (void)
- [3] 3GPP TS 45.005: "Radio transmission and reception (Release 7)".
- [4] 3GPP TS 24.008: "Mobile radio interface Layer 3 specification; Core Network protocols; Stage 3 (Release 7)".

# 3 Definitions and abbreviations

Unless listed below, all definitions and abbreviations used in the present document are listed in documents referenced in clause 2.

## 3.1 Abbreviations

For the purposes of the present document, the following abbreviations apply:

DARP	Downlink Advanced Receiver Performance
SAIC	Single Antenna Interference Cancellation, also known as DARP - phase I
MSRD	Mobile Station Receive Diversity, also known as DARP - phase II

---

# 4 Void

---

## 5 DARP Phase II MS Independent of Release

MSs that conform to Release 5 and support DARP - phase II shall support the following requirements in Release 7.

### 5.1 RF Requirements

The MS shall comply with the RF requirements for DARP - phase II specified in [3]. These requirements are:

Section 6.2: Reference sensitivity level.

Section 6.3: Reference interference level.

### 5.2 Signalling Requirements

The MS shall support the following information elements specified in [4]:

Section 10.5.1.7 Mobile Station Classmark 3, with the following exceptions:

- Fields *T-GSM 400 Bands Supported / T-GSM 400 Associated Radio Capability, T-GSM 900 Associated Radio Capability, DTM GPRS High Multi Slot Class / Offset required / DTM EGPRS High Multi Slot Class, GSM 710 Associated Radio Capability, T-GSM 810 Associated Radio Capability, and Multislot Capability Reduction for Downlink Dual Carrier* shall be indicated as not present since they are not defined in Release 5. This is done by setting the related indication bit to '0'.
- Parameter *DTM Enhancement Capability, Repeated ACCH Capability* and *Ciphering Mode Setting Capability* shall be indicated as not supported since it is not defined in Release 5. This is done by setting the bit value '0' for this parameter.

Section 10.5.5.12a MS Radio Access Capability, with the following exceptions:

- Fields *DTM GPRS High Multi Slot Class / DTM EGPRS High Multi Slot Class, Multislot Capability Reduction for Downlink Dual Carrier, and Downlink Dual Carrier for DTM Capability* shall be indicated as not present since they are not defined in Release 5. This is done by setting the related indication bit to '0'.
- Parameters *Multiple TBF Capability, Extended RLC/MAC Control Message Segmentation Capability, DTM Enhancements Capability, PS Handover Capability, and DTM Handover Capability* shall be indicated as not supported since they are not defined in Release 5. This is done by setting the bit value '0' for each of these parameters.
- In addition, for *Access Technology Type*, the values '1001' through to '1101' shall not be used since GSM T 380, GSM T 410, GSM T 900, GSM 710 and GSM T 810 are not supported in Release 5.

NOTE: The lack of one or more of the fields following the Downlink Advanced Receiver Performance field in Mobile Station Classmark 3 IE or MS Radio Access Capability IE should not be considered as an error by the network. In this case the meaning "not supported" or "not present" should be assumed as indicated above.

## Annex A (informative): Change history

Change history							
Date	TSG #	TSG Doc.	CR	Rev	Subject/Comment	Old	New
